Foreword

In 1951, Alfred H. Barr, Jr., then director of The Museum of Modern Art, wrote in the catalogue of the Modern German Painting and Sculpture exhibition: "Many believe that German painting is second only to the School of Paris, and that German sculpture is at least equal to that of any other nation." The present exhibition and catalogue, devoted exclusively to Expressionist sculpture, allow us to recognize its excellence and vitality. Never before, either in Germany or America, has there been such an exhibition. With few exceptions, sculpture has been omitted from surveys of the Expressionist movement as a whole and from general presentations of twentieth-century art. Yet the fact that a significant body of such work has survived, and that an even greater one was created, cannot be overlooked.

This exhibition was conceived and organized by Stephanie Barron, Curator of Twentieth-Century Art at the Los Angeles County Museum of Art, over the last three years. It includes representative examples of German Expressionist sculpture from European and American collections and examines plastic works produced by German artists and by their contemporaries elsewhere in Europe who were affected by the movement and its spirit. Much of the information presented in the exhibition and catalogue was acquired through research in books, catalogues, and periodicals from the early part of this century that were made accessible by The Robert Gore Rifkind Foundation and Library of German Expressionism in Beverly Hills.

It is a special pleasure for the Los Angeles County Museum of Art to collaborate, as it did in 1980 on The Arant-Garde in Russia, 1910–1930: New Perspectives, with the Hirshhorn Museum and Sculpture Garden. Washington, D.C. We are very pleased that the present exhibition will also travel to the Josef-Haubrich-Hof Kunsthalle Köln where we anticipate that it will be as much of a revelation to viewers as it will be to their counterparts in the United States.

The lenders to the exhibition, who are listed separately in this catalogue and who have agreed to part

with works from their collections for display in Los Angeles, Washington, D.C., and Cologne, have our sincere thanks; without them this exhibition would not have been possible. The early support of several of them was extremely important to the project: Dr. Wolf-Dieter Dube, now Director-General, Staatliche Museen Preussischer Kulturhesitz, Berlin; Dr. Leopold Reidenreister, Director, Brücke-Museum, Berlin; Dr. Eberhard Roters, Director, Berlinische Galerie, Berlin; Dr. Siegfried Salzmann, Director, Withelm-Lehmbruck-Museum der Stadt Duisburg; Dr. Martin Urban, Director, Nolde-Stiftung Seebüll; and European and American collectors Hans Geissler, Kari-Heinz Scherer, Titus Felixmüller, and Robert Gore Bifkind.

This catalogue was copublished in English in association with The University of Chicago Press and in German by Prestel Verlag. Thus the history of a movement largely ignored by scholars and the general public will now be accessible to a wide audience.

German Expressionist Sculpture has received major funding from the National Endowment for the Arts and the National Endowment for the Humanities; many foreign loans have been indemnified by the Federal Council on the Arts and Humanities. We are also grateful for support from the Goethe Institute for related events. Without this support, an exhibition and publication of this magnitude would not have been possible.

Acknowledgments

The organization of German Expressionist Sculpture has taken over three years and involved the cooperation of many institutions and individuals. Intial support for the project came from Earl A. Powell in, Director, Los Angeles County Museum of Art, and from the Board of Trustees. The early and confident communication of Abram Lerner, Director, Hirshhorn Museum and Sculpture Garden, Washington, D.C., as well as a generous grant from the National Endow ment for the Arts provided critical support to the still cess of this venture. In 1981, I was awarded a McCloy Fellowsh,p by the American Council on Germany that enabled me to trave, throughout that country for one month to do research. Finally, the Museum's Modern and Contemporary Art Council has provided continued support for the exhibition since its inception. This interest and enthusiasm has been much appreciated.

To gather more than one hundred and twenty sculptures in a variety of media from over seventy lenders in Europe and North America has been an arduous adventure involving assistance from several individnals. In 1981, Dr. Wolf Dieter Dube, now Director General, Staathche Museen Preussischer Kulturbesttz, Berlin, was a Scholar-in-Residence at The Robert Core. Bifkind Foundation in Beverly Hills. During those six weeks, and in the intervening two years, Dr. Dube was unfailingly belieful and encouraging, providing expertise and guidance to this project. Professor Peter W. Guenther, University of Houston, in addition to being a contributor to the catalogue, has been an exceptional colleague, he has reviewed manuscripts and translations and mane many valuable conceptual suggestions. Karin Breuer, my able research assistant. smoothly coordinated the graphic works in the show and collaborated on the checklist. The staff of I be Bifking Foundation over the past three years -Ms. Breuer, Gabrielle Oulette, Tjimkje Singerman, Katherine Jones Isancson, and Susan Tranger has been extremely helpfur

In Germany, Dr. Joachum Hensinger von Waldegg, Kunsthalle Mannheim, has been particularly helpful th locating sculptures by lesser-known artists of the twenties and has made many valuable suggestions. about the organization of the project, as well as contributing to the catalogue. Lalso thank Dr Wolf. gang Henze, Campione d Itaha (Lugano), for his assis lance in securing works by kirchner for the exhibition. for opening his kirchner archives to me for catalogue. research, and for his essay on Kirchner's scripture Karlheinz Gahler, Frankfirtt, generously made available his rich archives on the Brucke artists. Dr Gerhard Wietek, Director, Schleswig-Holsteinisches Landesin iscum contributed several essays to the catalogue and made many cogent suggestions concerning the entire project. Dr. Eberhard Roters, Director, Berimische Galerie, Berlin, has been unfadingly enthusiastic about and supportive of this project. Dr. Siegfried Gobr, Director, Josef Haubrich Kansthade Kolta and our German collaborator on the exhibition, was especially helpful in negotiating with

lenders and locating photographs. (Unfortunately because of their fragile nature, a few important wood and plaster sculptures [by Barlach, Belling, Deckel, Kirchner, Kokoschka, and Emy Roeder] could not be included in this exhibition.)

This presentation has been enriched by conversanons and correspondence with each of the contributors to the catalogue and with other individuals, including Thomas Borgmann (Cologue); Dr. Lucius Grisebach (Berlin), France Roussillon (Montargis); Dr. Martin Schwander (Basel), Dr. Heinz Spichhaim (Hamburg), and Dr. Beat Stutzer (Chitr). Research on the sculpture of Barlach and Kollwitz and the problenis of easting took me to Hamburg, Gustrow, and to the H. Noack Foundry, Berlin. For their efforts on tisy behalf at these various locales, I am indebted to Haus-Barlach, Dr. Hartputt Dietrich, and Dr. Isa Lohmann-Siems (Hamburg); Dr. Ull Eisel (Gustrow); and Dr. Arne Kollwitz, Joachim Segeth, and Bernd Schultz. (Berlin). In North America, Louis Danziger (Los Angeles); Professor Albert Elsen (Berkeley), Dr. Noom-Jackson-Groves (Ottawa); and Professor Peter Sclz. (Borkeley) have withingly shared with me their ideas. about the exhibition, Ernst Schurmann (San Francisco) and Richard Schneider (Los Angeles), both of the Goethe Institute, have enthusiastically supported this project

I would like to thank my colleagues in the Museum who have been of great help over the past three years Myrna Spinot, Assistant Director of Museum Programs, has been instrumental in coordinating travel arrangements and resolving numerous problems inconjunction with the exhibition and catalogue. Editor Lynne Dean and former Editor Barbara Finzig, under the direction of Coordinator of Publications and Graphic Design Letitia Burns O'Connor and Head Publications Editor Andrea P. A. Belloh, have worked firelessly with mountains of texts in English and German to produce a unified publication. Jeffrey Mucler. responded creatively to the challenge of designing the catalogue. Museum Photographer Larry Reynolds took many of the photographs used in the catalogue, mehiding those on the front and back covers. Colleagues Peter Fusco, Curator of Decorative Arts and Luropean Sculpture, and Scott Schnefer, Unrator of European Paintings, have both shared with me their ideas about this exhibition. For the installation, I was fortunate to be able to work with architects Frank Gehry and Greg Walsh, their conception was realized by Jim Kenion, Head of Technical Services, and his able staff. Our Museum Registrar, Renée Montgomers, and her assistant John Passi worked for over a year, often in consultation with conservators William Leisher and Bilbe Milam, to assure the safe transport of all the works in the exhibition. William Lillys and Lori Starr. of the Museum's Education Department have both responded warraly and creatively to this project. My thanks also go to the several individuals who have provided capable translation assistance, including Dr. Hans Wagener, Professor of German, Department of

Germanic Languages, I. CLA, Joachim Neugroschel, who provided the excellent translation of the important and difficult excerpt from Einstein's *Negcrplustik*, the Alia Hall, and Aluseum Service Council Assistant Grete Wolf.

In the Department of Twentieth Century Ari, i am grateful for the encouragement of my colleague Semor Curator Maurice Tuchman and to Stella Paul. Curatorial Assistant, who has assisted on the exhibition and catalogue in numerous areas, Ms. Paul also was instrumental in locating the Kirchner sculpture Female Dancer with Necklare (cat. no. 60), previously assumed lost. Our former department secretary Cathy Bloome enthusiastically and skillfully managed correspondence with over seventy lenders and a dozen contributors, as well as texts in two languages, with grace and aplomb. It was a special pleasure to work with her Museum Service Conneil Volonteer Grace Spencer has also been of great assistance on this project.

The keen interest maintained by colleagues, collectors, and artists in the exhibition has been a source of constant inspiration. I thank all of them for helping to make this assessment of the forgotten scripture of German Expressionism a reality.

Notes to the Reader

For each object in this evialition, the following information has been supplied when available or appropriate intiin English and German, date of execution, casting date, medium, edition number dimensions, lender, catalogue raisonné reference, inscriptions, and foundry marks. Subtitles of works are indicated following a colon, and after nalive titles are it dicated following a slash. Dimensions are given with height preceding width preceding depth, imless otherwise indicated, abbreviations have been used as follows:

1 - hack left l.b. lower back l.b. lower back left l.b. lower left l.c. lower left l.c. - lower right l.c. - front left left

The cata ogae entries are arranged chronologically

A genera. Bibliography appears at the end of the book, followed by individual Bibliographics for each of the artists featured in the exhibition. In selecting works for melision, emphasis was placed on occurre catalogues and on books which themselves contain extensive bibliographics. Citations appear in short form in the footnotes, using the author's last name (or the distintion's name in the case of exhibition catalogues produced by museums or galleries) and the date of publication. For complete information, the reader should consult the Bibliography for the artist at question; the general Bibliography (if a single asterisk follows a work cited in short form); or the extensive Nirchner B bhography (if a short citation is followed by two asterisks).

A gray background is used throughout the catalogue to distinguish articles and photographs originally published during the Expressionist period. Comparative photographs of objects not included in the exhibition are also set against a gray background. Photographs appearing in the Documentary Section of the catalogue are not necessarial those that were used to illustrate the essays or texts as they were originally published.

Stephanie Barron

German Expressionist sculpture occupies a distingnished place in the history of modern art. However, except for the work of two well-known German sculp tors-Withelm Lehmbruck and Ernst Barlach-the. significance, and in fact the very existence, of this body of work created in the first third of the twentieth century are largely unrecognized. It is the aim of the curcent exhibition and catalogue to begin to rectify this art historical oversight. More than one hundred and twenty examples of German Expressionist sculpture by thirty-three artists are presented, together with thirty related works of art on paper, included are scriptures by artists recognized for their work in this medium-Ernst Barlach, Wilhelm Lehnibruck, Georg Kolbe, Benée Sintenis, Gerhard Marcks-as well as sculpture by such figures as Kathe Kollwitz, Ernst Ludwig Kirchner, Erich Heckel, Karl Schmidt-Bottluff, Emil Nolde, Max Beckmann, Egon Schiele, and Otto-Freundlich, whose reputations are based on their painting and graphic ocuves. A significant number of works by lesser-known artists, who belonged to the second generation of Expressionism in the twentiesamong them Herbert Garbe, Conrad Fehrmuller, Paul Rudolf Henning, Wil jam Wauer, and Christoph Yollare also examined. Included in the catalogue are examples of the artists' rich and varied writings as well as evaluations by contemporary critics, scholars, writers, and poets. Seven essays and excerpts from contemporary texts, published in translation for the first time, highlight the German Expressionists' concern with particular materials and their attraction. to African and Oceanic art. They also indicate the serior sness and passion with which the artists and writers of this movement addressed (ssues of importance to themselves and their art in the teens. twenties, and thirties.

THE GERMAN EXPRESSION - MOMANIA INTERIOR

The coming of ago of modern art can be traced to the second decade of this century, when Cubism, Futurism, the Russian avant-garde, Dada, Surrealism-and German Expressionism-emerged simultaneously in France, Italy, Russia, Switzerland, and Germany. The German Expressionist, Russian avant garde, and Surrealist movements were not limited to individual. styles or media, Bather, they encompassed breakthroughs in painting, sculpture, printmaking, film. theater, design, architecture, and especially in literature. Frequently artists collaborated or experimented in different areas, painters and sculptors wrote plays and designed for the film or theater. German Expressionism was therefore more than a style. Emerging at a time of great cultural, economic, social, and political flux, it reached maturity by the years of the First World War, attaining its height in the teens. and during the Weimar Republic before coming to an end as a movement by the mid-twenties.

The Expressionist era was one of great experimentation, excitement, and energy involving participants in major German cities such as Berlin, Dresden, Munich, Hamburg, and Cologne, as well as in isolated

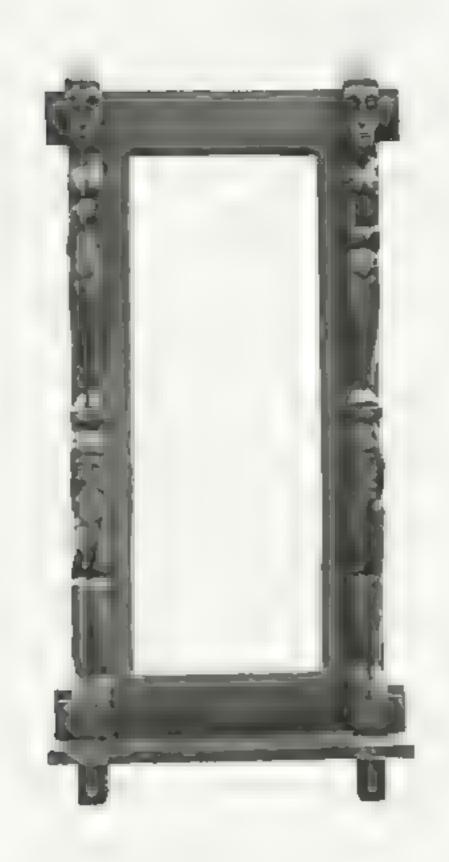

towns-Worpswede, Gustrow, Lubeck, and Seebull. The movement encompassed the work of many non-German artists, including the Austrians Oskar Ko koschka and Schiele and the Swiss Hermann Scherer and Albert Müller. It transcended national borders and spread across Europe, finding short- as well as long term adherents in Belgium, Austria, Switzerland, France, Russia, and Czechoslovakia. Many artists of the period whose work is identified with other stylistic. tendencies, such as Cubism or Futurism, or with other centers of artistic activity, created works which would be unimaginable without the model of German Expressionism Some of these artists, like the Ukranian Alexander Archipenko or the Czechoslovakian Oto Gutfreund, lived briefly in Germany and exhibited there. By including them in this exhibition, we wish to focus attention on those of their sculptures that are infused with an Expressionist attitude.

The development of the German Expressionist movement is not easy to trace in a linear fashion. However, as has been suggested elsewhere,! the movement manifested itself in four phases. It began with two artists' groups: Die Brücke (The Bridge) in Dresden in 1905, and Der Blane Reiter (The Bine Bider) in Munich in 1914. The Brücke was founded by four young architecture students, Ernst Ludwig birchnet, Karl Schmidt-Rottluff, Erich Heckel, and Fritz Bleyl. whose interests had turned to art. Influenced by Edvard Munch, Paul Gauguin, and Vincent van Gogh. they sought in their own work a new freedom of expression. A manifesto they wrote proclaimed their intense passion for art and their burning desire to free themselves from the conventions of established society, these artists sought to establish a "bridge" to the future. They were extremely prolific, both in painting and in the graphic arts-most especially, in the making of woodcuts. The four original Brücke artists invited: others to join them; Nolde, Otto Mueller, and Max Pechstein were affiliated with the group for intermittent periods.

Although most of the Brücke artists experimented with scripture, only kirchnee and Heckel executed any three-dimensional work while the group was together. The studios of Brücke members, first to Dresden and then in Berlin, where they lived from 1911 until their formal dissolution in 1915, were decorated extensively with carved furniture, exotic wall paintings, and many hand-colored and painted objects. These objects, called *Kunsthandwerk*, were made for personal or family use (fig. 1, p. 14). Much Brücke carving was initially intended for private use and generally was not exhibited during the artists' lifetimes. Perhaps for this reason, Brücke sculpture is, for the most part, an aspect of its members' ocuvres unknown in the United States

Der Blaue Reiter, the other artists' group linked to the first phase of German Expressionism, was founded in Munich in 1914 by Franz Marc and Wassily handinsky, both of whose work was in the process of the first o

Fig. 1 Kirchnee, Mirror of the Four Times of Day (Cat. no. 70) c. 1927

Photograph by Kirchner, autumn 1924, showing a group of sculptures by Scherer, from left to right, Lovers (eat no. 114); Mother Narsing Child (cat no. 17); Mother and Child (Mutter und Kind), c. 1924 wood, ministkreiht Basel. evolving toward nonohjectivity In 1912, they coauthored an almanac, Der Blatte Reiter, one of the must important publications of modern art. This an thology included articles on art, music, and theater. and was illustrated with images of contemporary, Romanesque, Gothic, and Benaissance art, as well as non-Western and folk objects. While the Brucke artists were greatly impressed by the non-Western art they saw in museums in Dresden and Berlin and created their own environments to evoke it, Der Blane Beiter responded differently. An article in the almonge discussed masks, and the publication also included photographs of many examples of African, Oceanic, and Pre-Columbian art. However, none of the Blauer Reiter. artists created a significant body of sculpture. Marc and August Macke cach created a few modest three dimensional pieces, and many of the members of Der-Blaue Beiter carved Kunsthandwerk for private use. Therefore, Der Blaue Reiter falls autside the perimeters of this exhibition

The second phase of German Expressionism was marked by the artists' anticipation of, involvement in. and response to the First World War. These nr. 8-8 approached the War with great zeal at first and with tremendous confidence in Germany's cause, the War was welcomed as a way to bring about a new social or der There was shock, frustration, and outrage as events unfolded, however, and the German Expres sionist artists in particular mounted lervent calls for peace, both in their art and in the journos they spon sored. Some found the hostilities unlicarable and clit mately fled Germany For example, I llowing a ner yous breakdown in Berlim, Kirchner moved to Switzerland in 1918 and settled in Frauenkirch, dear Dayos. In 1925, when the kunsthalle Basel mounted a targe exhibit of Kuy buer's work, a group of young tocal artists responded enthusinstically Several of them, including Albert Muller and Hermann Scherer, decided to devote themselves to the ideals of the Bracke, With the latter as their model, they formed a group called Bot Blon (Bed-Blae), Beginning in 1923, Muller and Scherer Visited Kircl ner in the mountains and started to experiment with wood carving (fig. 2, p. 14)

The impact of the War and its aftermath on artists in Germany was enormous and brought about the third phase of German Expressionism. At the end of the hestilities, the Expressionists were united in their struggle against the official regime. A period of exubergnt experimentation and interaction among media. ensued. Participants in the movement felt strongly that only art could humanize a brutal world situation. On the heels of the revolutions in Bussia and Germany a number of Expressionists joined one of several of the short lived radical artists' groups in Berlin -the Novembergruppe (November Group) and the Arbeitseat for Konst (Workers' Council for Art)—or in Dres. den - the Dresden Sezession, Gruppe 1919 (Dresden Secession: Group 1919). These associations sponsored a number of political and artistic activities and exhibitions. The Novembergruppe, founded by former Brucke member Pechstem in 1918, declared itself a

group of radical artists and had as its motion "Liberty Equality, Frateriuty" Its members strove for harmony among the Expressionists, Cubists, and Futurists in Berain.

Many second-generation German Expressionists who were members of these groups, including Oswald Herzog Budolf Belling, Freundlich, Garbe, Gela For ster, and Emy Roeder, flirted with abstraction during this period, seeking to integrate it with the expressive. ness in their own work, thus providing their three-Jimensional pieces with a new-found tension. The motivating influence on the work of the Novembergruppe and the Arbeitsrat for Kinst was the sculpture of Archipenko. As early as 1910, Archipenko's work had been beself on a rhythmic handling of positive and negative space, light and shadow, and a dissolution of the Luman figure in Culust like faceted planes Archipenko subordinated the evocative figure 40 the principle of rhythmic, dynamic form (fig. 5, p. 15, and cat no. 2).

In 1918, the trifluential Berlin dealer and published Herwarth Walden inclinited an exhibition of Archipenko's work at his Galerie Der Sturm. It greatly impressed a number of sculptors who had begun to emphasize reductive qualities to their work, which tended toward abstraction in the same year, Walden published a small pamphlet, Der Sturm. Fine Emfidieung (Lier Sturm: An Introduction), in which he attempted to divide the achievements of German Expressionism into separate sections - painting, sculpture he described the expressive yet abstract style which would become characteristic of work of the twenties:

Expressionist sculpture, lattempts no longer to inntate forms in nature, but instead to create abstract images. Just as painting uses the surface as material for artistic representation, sculpture has the body shape as prerequisite. This shape, however, lies not in the unit mon of a ture, but in the relationship between the individual scalptural forms.

The sculpture of some members of the November gruppe (Garbe, Belling, and Herzog) was clearly an extension of Archipenko's principles and translated his constructed forms into "Expressionist abstractions" in Garbe's Sleep/Lovers (fig. 4, p. 15, and cat no 40), for example, the recognizable form of a man in repose was transformed into essential abstract and rhythmical shapes. An emphasis on voids as integrating elements in sculpture and on the expressive gesture combined with a Futuristic dynamic of form is apparent in work by Belling and Freundhich, both extant at didestroyed.

Mer the War, Dresden which a decade earlier had been the home of the Brücke artists, saw the birth of

the short-hyed Sezession: Gruppe 1919, which included among its ranks two important sculptors, Christoph Voll and Gela Forster, and the painter and graphic artist Conrad Fehamuller, who created a small sculptural ocuvre. Vall, a problic sculptor, was attracted by the inherent power of wood. His rough, unrestrained, striking human figures convey strong emotion. At the beginning of his career, foll worked with wood by backing away at the surface, thus imparting a characteristic brutality to his pieces. A few large works, including the life-size Nude, Ecce Homo (fig. 5, p. 16, and cat. no. 146), attest to VolPs technical mastery. The old man depicted in this latter sculpture - a universal figure accusing the society he confronts-directly and emotionally affects the viewer. This remains one of the most memorable works of German Expressionism Many years later, Gerhard Marcks remembered, "He (Voll) died very young and was certainly one of our best sculptors."4

Geta Forster married Arcinpenko in 1922, and worked in Dresden and Berbii before emigrating to America a year later. Unfortunately, her entire sculptura) cenvre from the early twenties has disappeared. it is known today only through photographs of three sculptures and contemporary accounts.5 In 1919, Forster exhibited Man (figs. 4 and 5, p. 33), Conception (fig. 6, p. 16), and Awakening (figs. 2 and 5, p. 52) with the Sezession: Gruppe 1919, At the time, well-known critic Theodor Daubler wrote of Man: "The entire sculpture chmaxes in a cry." Forster's Conception, a monumental work in stone, recalls the Venus of Willendorf, a type of figure that recurs in German. Expressionist works, conveying without excessive detail the feeling of a swoden, full, feelind body Forster's sculpture, like much of the postwar work dis cussed above, commuted diverse elements into a kind of abstract emotionalism

By the and-twenties, German Expressionism had ceased to be a viable movement, although individual. artists continued to work in an Expressionist mode. A number of other styles had begun to achieve wide spread recognition, including Dadaism, Constructiv ism, and Nei e Sachhehkeit (New Objectivity), which made its appearance in the famous exhibit of 1925 in Mannheim. By this time, the Bauhaus, the most in fluential modern art school, was actively pursuing a direction which emphasized architecture and technology and showed little tolerance for the Expressionistic impidse. By the time the National Socialists came to power in 1955, German Expressionism as a movement was already over. Due to the Nazis' systematic proscription, barassment, and defamation of modern art and their ultimate destruction of numerous objects, artists who previously had been popular and lauded

were suddenly prohibited from exhibiting and working and found their art removed from public display. Thus, during Expressionism's fourth phase, the Nazis confiscated handreds of paintings, sculptures, and prints from public collections. In 1957 in Munich, for example, over seven hundred works of art by Nolde, Karchner, Heckel, Kokoschka, Beckmann, Schmidt-Rottloff, Kandinsky, and dozens more were collected in the infamous Entartete Kunst (Degenerate Art) exhibition and documented in the accompanying catalogate (figs. 7 and 8, p. 17). Any discussion of German Expressionism therefore must rely heavily on contemporary documentation of the many important works of art which were destroyed by the Nazis or lost in the Second World War.

Although German Expressionast sculptures were created during several decades by many artists in a wide var ety of circumstances, some general characteristics may be established. Expressionism, it has been suggested by Ivan Goll, was "a belief, a convicaon " These sculptures seek to make visible the inner experience of humanity. They focus on the human itteage and on numan psychology, evoking a specific political and social context, projecting a bitter reaction. against existing conditions and expressing utopian ideals. Frequently such sculptures possess hold colors and rough outlines, the forms are clougated and stretched to their bouts or hewn from found wood. German Expressionist sculpture conveys an emotion ally charged handling of subject matter. It demands an empathetic response from the viewer. Gesture is enphasized over restraint, resulting in unconventional forms which convey an excess of feeling

Like many other artists of the early twentieth cen tury, the German Expressionists maintained a keen interest in the inherent properties of materials and strove to interrelate subject matter with the most evocative and appropriate media. They shared with other modernists a respect for the power of non-Western art, seen in growing museum collections or while travelling. Much of their sculpture is imbued with the direct, evocative strength they admired in such objects. For the most part, German Expression(st sculpbire was carved or east rather than modeled and polished. The image is either blocklike-its formal. definition integral with the shape of the original mate rial - or it is distorted, as if trying to escape the confines of the medium. Much of this sculpture is mornmental, if not in scale then in the feeling it impacts

The fact that the German Expressionist era was closely fied to the nationalistic hopes and final anguish of the First World War is clear from the use of titles like Feur, Hunger, Anger, Despair, and Mourning, or The

teenger. The Eestatic One, and The Beggar (fig. 9.) p. 17, and cat. no. 145). The artists' reaction to and interest in probing the psyches of their subjects also led many of them to create piercing portraits and selfportraits. Frequently these were larger than life, with attention fixed on the face as the greatest signifier of burnan expression. Spiritual them.es - the inner turmoil of man, the expression of external chaos, or even specifically religious content—were extremely important. Some of the most moving German Expressionist works are modern interpretations of traditional themes—the Crucifixion, Pietà, Erce Homo, or represemations of figures such as Joseph St. Schastim. The introduction of Medieval and Renaissance iconography into a contemporary context lent such sculpture a compelling intensity and rooted it firmly in saiditions of Northern European art

Masterpieces in sculpture were produced in all the major modernist styles-Cubism, Euturism, Constructivism, Hada, and Surrealism. However, none of crese styles engendered a large body of work in three dimensions. The Cubists, for example, searched for a new pictorial fusion of mass and void in the representation of objects in space. A "coor," cerebral style of lines and shapes rendered in a monocheomatic paette. Cubism is essentially an art of two dimensions Only a few significant examples in sculpture exist. such as Picasso's Head of a Homan, 1909 (fig. 10, p. (8). The tangible quanty of sculptural materials actually denies the ambiguous pature of Cubist unages.8 By contrast, the German Expressionist idiom could be readered successfully in plastic terms, the love of raw materials, the exaggerated gestures, the concentration on psychological and spiritual themes. and the pure, unbridled energy characteristic of German Expressionist painting and graphics lent themselves well to sempure.

Although it is commonly held that modernism in sculpture began with Rodin in Paris at the end of the nincleenth century, it is significant that one of the two earliest-and most important-German Expressionist sculptors, Ernst Barlach, studied in Paris around the turn of the century but was unmoved by Rodin. In stead, he was attracted to French artists of an earlier. period – Jean François Willet, Constantin Menmer, and Theophile Steinlen-whose images of workers and prasants appealed to his sensibility. On the other hand, for Wilhelm Lehinbruck, the other early German Expressionist sculptor, Rodin was a nemests Lehmbruck was aware of the French artist's Thinker. and Hatking Man (fig. 11, p. 18) as antecedents for the twentieth century sculptor's exploration of modern man as his spiritual marror amage. It was not until

8. Douglas Cooper, The Cubist Epoch, New York, Phaidon Books, 1970, pp. 251–62; Fred Licht, Scutpture – 19th and 20th Centuries, New York, New York Graphic Society, 1967, pp. 40– 42; Robert Rosenblum, Cubism and Deentocth Century, 4rt. New York, Harry N. Abrams, the., 1961, pp. 262–68

LehmLruck actually confronted Rodin's work that he was able to free himself from the French scribtor's in fluence and to create his own wholly original sculptures. In breaking free from the Academic tradition. Lennibrack began, around 1910, to create a new kindof sculpture, as seen in the Standing Female Figure (fig. 12, p. 18),* which he exhibited in the 1910 Salon. d'Automne. He experimented with subjecting the human body to a recombination of individual parts to provide an evocative subouette. At the 1912 Berlin Secussion exhabition (and in the Armory Show in New York the following year), Lehmbruck exhibited Anceung Homan (fig. 13, p. 19) in which the full, round forms of earlier sculpture were replaced by clongated. magnerist lines. Lehnibriick rejected the traditional modulated, artici lated surface in favor of essential forms and simple, altenuated gestures to convey meaning.

As we have seen, the First World War initially was greeted with anticipation and pride. Many German: artists served in the military, some on the front lines, others in the medical corps; some, including Franz Marc and August Macke, were killed. At the end of the War, Lehm truck committed smede. In the first few months of lighting, the Expressionist Barlach felt aurning patriotism. His supreme war image is The teenger (originally called Berserker) (fig. 14, p. 19, and cat. nos, 9 and 10), which represents a German patriot surging forward in his attack on the Athes, his movement checked only by the sword he holds over his head and back. By comparing the hthograph of the fig. are in The Avenger - entitled The Holy War and published in the periodical Kriegisteit (Hartime) (fig. 15) p. 19, and cat, no. 11)—with the sculpture, we can understand how Barlach Inniself saw this figure (a) looming, powerful, larger-than life-size hero. As he wrole:

I have been at work on my storming Berserker [The leenger] and it begins to be important to oie. Gould it be possible that a war is being waged and I forget it over a hundred-pound image of clay? To me this Berserker is the crystallized essence of War, the associated each and every obstacle, rendered credible. I began it once before but cast it aside because the composition seemed to burst apart. Now the unhearable is necessary to me. 10

Barlach's figures of this period are highly compact and emotionally charged with extraordinary purpose

If young German artists approached battle with the zeal and fervor of Barlach's Avenger, they returned, if

at all desolate, lonely, and defeated it Barlach's figures signal the high point of early hope and nationalistic pride in the War. Lehmbruck's Fallen Man (fig. 16, p. 20, and cat. no. 91) and Scated Youth (fig. 17, p. 20; cl. cat. no. 92) represent the spiritual and moral college telt by the War's end. When art historian Paul Westheim, who was also Lehmur tek's first biographer, returned home from the front on leave in 1916, he saw The Fallen Man for the first time.

A fallen youth is depicted, cramped in his collapsed position....What we see is a young warrior who somehow in the force of the charge ... received that attle piece of lead which has forn him down. But this is a death which the body is resisting. The body reacts and accuses, and screams, and refuses to accept the fact of its end. The head, beamag down between the shoulderblades like lire slung from the caanon, bores into the ground in despairing help essness, as if protection could be found from the death being spewed forth that day.... A weapon, a tool of death now becomes useless, drops from his hand. For once again the world has collapsed, a worldfilled with love filled with activity, filled with happiness, a world whose focal point had been this hero. There are no soft lines, no melting surfaces in this hous. Even in the form there is growning and grating and oppression (1)

By 1917 many of Lehmbruck's friends—both German and French—had not returned from the War- be himself had moved to Switzerland, overcome by the tatastrophe. The Scated Iniah, perhaps a self-portrang a generalized portrait of his artist friends, mourns for an entire generation. It and The Fuden Man, so totally unlike traditional sentimental or friumphant memorial sculpture, depict suffering, despair, and the mourning, rather than the celebration, of victory

Like Lenmbruck, Nathe Kollwitz also created a significant war memorial: the large stone set lpture of a kneeling mother and father for the cometery in

11 National Gallery of Art. Washington, D.C., 19-2, op. etta.
pp. 29-50

Eessen near Diksrutude in Belgium (fig. 18, p. 20). hallwitz was an intense pacifist who left strongly about the human predicament and who experienced greatanguish at the death of her son in the War Several of her most powerful graphic and sculptural works, including Tower of Methers (fig. 19, p. 21, and cal no 86) and the related cycle of seven woodcuts. The Har-(fig. 20, p. 21, and cat no. 82), are eloquent arguments for peace. In the former she decries the conscription of young children into the army; the mothers militantly surround and defend their young. In formal terms this composition owes much to Barlach, whose sculpture and woodcuts influenced Kollwaz from 1917 on. Jouer of Mothers shares with Barlach's sculptures a dependence on the blocklike form as a basis for its overall. definition. Although seu pted in the round, the figures barely project from the confines of the solid mass. seening instead to merge with one another

EXPR. SSIONIST THUMES: BLL GROVAND. TELLUATION

Sculptures such as Barlach's Har Memorial for the Güstrow Cathedrat (cat. no. 21), Joachum Karsch's Job and Hts Friends (fig. 24, p. 22-cf. cat-no. 59), Kollwitz's Pieta (cat. no. 85), Ludwig Gies' Cruc(fixion (fig. 21, p. Karl Alb.Ker's St. Sebastian (fig. 32, p. 22), Voll 8. Viele, Ecce Homo (flg. 5, p. 16, and cat no. 146), and Ossip Zadkine's Prophet (cut. no. 150) all invoke familare taggery to convey the artists' convictions with respect to contemporary events. The spirituality which these sculptors felt compelled to express was caused by the stress of the period in which they lived but was well within the confines of German tradition. The expressive wooden carvings, especially of religious subjects, produced by Northern Gothic artists of the fourteenth and fifteenth centuries were viewed with renewed interest by the German Expressionists In adopting wood carving as a technique, they hoped to imbue their own works with a similar spirituality. Barlach, the preemment and most proufic ' modern Gothic?" found in this Northern tradition a way to convey many of his most passionate concerns, among which was man's striving towards the spiritual. he beheved the human figure to be the "expression of God." insofar as he broods, haunts, and burrows in and behind man."12

Several of Koliwitz's sculptures also convey a deep spirituality. Her Picta, permeated with the sorrow of a mother mourning her son, a victim of the War, recalls Renaissance antecedents. Lehmbruck's Fallen Man can be seen as a fallen St. Sebastian, one of the most popular figural types of the era. Albiker's disturbing depiction of that saint (fig. 22, p. 22) is an uncanny jux taposition of Aledieval form and modern content. These symbolic marryr figures convey the pathos and intense feelings experienced by the artists during the turbi lent War years. Sumilarly, the Old Testament theme of "Job and His Friends" inspired both Karseli and Zadk ne to create full-scale, multi-figure sculp tures whose traditional symbolic significance may be

This sculptural group won the Staatspreis der Preuss schen Akademie der Kunste (Stale Prize of the Prussian Academy of Arts)

seen as an extension of the specific anguish and disappointment of the postwar era (figs, 25 and 24, p. 22, and cal. no. 59). In the karseb group, the figures gesticulate and rend their clothes; in the Zadkine they turn inward, seemingly overwhelmed by their grief

Perhaps the most moving of all German Expression. ist religious sculptures was the life-size wood cruciffy created by Ludwig Gies and ming in St. Marienkirelie in the northern city of Lubeck (fig. 21, p. 21).13 This sculpture was so disturbingly Expressionistic-with explicit detailing of wounds and bodily contortion that it was immediately vandalized by the townspeople. when it was installed. Subsequently the sculpture was destroyed entirely. It may seem astomshing that a contemporary religious work hing in a northern German Gothic church in the 1920s could have aroused. people's passions to such an extent. At the time, it was observed that "it would [have] be[en] hard to find a symbol that would impress posterity more powerfully and deeply with the meaning of the World War and its tallen heroes."48 By all accounts, the Gies Critificion was a masterpiece of carving, which created an acutely emotional impact.

As previously mentioned, one of the great unnovations of art in this century is to be found in the respect with which artists have considered the inherent properties of their materials. The Cubists and Constructivists in

- 15 See translation of Heise's "Der Kruzdixus von Ges im this ratalogue, pp. 57-40.
- D. Ibid., p. 39 of this catalog ic

troduced man made and found objects into their work, thus challenging illusionism, the very basis of earlier representational art. The German Expressionists exploited the natural properties of their materials and regarded their qualities as essential components of a complete aesthetic statement. Stone, clay, and—most importantly—wood particularly stuted this aim Unlike Medieval polychromed and gidded scripture, in which the variegations of the wood were smoothed over or disguised, its natural form and density are significant aspects of German Expressionist sculpture.

Although many of the sculptures in this exhibition are brouze, it is important to realize that very few of these were cast during the artists' infetimes. Although Kollwitz and Letinibrick, for example, obviously intended that their plasters be east, it is not clear whether, in all cases, artists like Bartach and Karsch wished to have this done. Often due to financial constraints and lock of patronage during their lives, work could only be east posthumously. Bartach, however, was clearly a wood sculptor first and foremost. When one sees his decager in bronze, one must keep in mind that the work was done first in clay and plaster (1914), then in wood (1923), and not insulafter 1930 in a bronze edition, cast at the urging of his dealer, Alfred Flechtlicia

The German Expressionists' particular attraction to wood coincided, in great measure, with their cuthusiasm for African and Oceame art. This interest, characteristic of most modern movements, has been ascrified to the wicespread influence of Paul Cauguin and his work and to the attraction for artists of the collections in European ethnographic museums. which had opened at the end of the innetcenth century in many European cities - among them the Völkerkunde-Museum (Ethnographic Museum) iit Dresden A keen public unterest existed in this art fueled by the Volkerkunde-Museum's elaborately illustrated portfolios and catalogues and by severalpopular publications dealing with African, Oceanic, and Eskime art. On a formal level, the German Expressionists responded to such objects as inspiration for a great number of their experiments in wood The formal characteristics of African works that attracted these artists are reflected in the frontal, feonic quality of their wood carvings as well as in the simplified forms of their pointings of the stark definition of their woodcuts

Among the German Expressionists, it was the Brucke group which had the most intense interest in "primitive" objects. As Leopold Ettlinger has pointed out, these artists were probably most familiar with Oceanic art, since in 1907 the Asian, American, and African collections of the Volkerkunde-Museum were in storage so that the extensive holdings from the South Seas could be shown ¹⁵ The decoration of the Brucke artists' studios was inspired in part by wall paintings from the Palau islands and other objects that they saw in the museum

In spite of the fact that kirchner wrote in 1915 in his Chronik der Klünstler! Glememschiell Brücke (Chronicle of the Brücke Artists' Group) that he had "discovered primitive art in 1905," he does not seem to have created sculptural works before 1909. Although only he and Heckel made sculpture during the time that the Brucke was together, and plastic work by other artists dates from the later teens, the Brucke inembers clearly shared an interest in wood, in ethnographic art, and in the rough, unpolished, or micanionflaged surface.

Mirchner was particularly articulate about the nature of wood carving and the creative process. As early as 1911 he wrote to the Hamburg collector Gustav Schiefler: "It is so good for painting and drawing, this making of figures, it lends wholeness to drawing and is such a sensual pleasure when blow by blow the figure grows more and more from the trunk. There is a figure in every trunk, one must only peel it out" (fig. 25, p. 25). If In 1925, Kirchner wrote under the pseudonym Louis de Marsalle in the journal *Der Cicerone* about the importance of working at wood, arguing passionately in favor of direct carving as opposed to bronze or plaster easting. If He also was keenly aware of the properties of various woods. In 1911 he wrote to

Schiefler: "The maple wood that you sent us lends it self well to being worked, it has such short fibers and is, as a whole, completely homogenous. One is tempted to polish it." "

Heckel, cofounder of the Britcke in Bresden, carved most of his sculptures from soft, easily manageable wood, such as limiten, birch, poplar, and acacia. His sculptures appear to have been inspired either by ethnographic works or by the Gothic. They range from contorted, crudely carved nudes to soffly modely J. tant female figures. All physiognomic articulation of these modern madonnas relates to the snigle, vertical tree trunk, the origin of the scalpture. I the lifteenthcentury church figures, they are often covered in opaque colors. Although Heckel stopped carving by 1920, he remained fascinated by ethnograp ne sculpture, collected it and used it as a motif in his later paintings and prints. His cuthusiasm for carved fig. ures (if only for slightly over a decade, seems to have encontraged other artists to explore the medium 20

Brucke member 5chmidt Rottluff's carvings were targely executed around 1917, several years after the group disbanded. Most are blocklike, swiftly hewn and more frontal and masklike than sculptures by Kirchner or Heckel (fig. 26, p. 24). These carvings and m lated woodcuts (fig. 27, p. 24) drow their subjects entirely from the artist's imagin ation, but they reflect strong inspiration from Benin and other African art (fig. 28, p. 24). Brucke member Emil Nolde actually traveled to the South Seas in 1915 and carved a small number of figures from the firewood he found on board ship. These figures possess strong resonauces. of the original shapes of the wood fragments. Although his predecessors or contemporaries had begun to make wood carvings inspired by what they saw on their artistic explorations, Nolde did no such seu p-

Of the Brücke artists with a significant sculptural ocuvre. Pechstein stands somewhat apart from the others. His output must have numbered over twenty works, although all but a few have been lost. In 1914, perhaps under the influence of Gauguin and of his fet low Brucke artists' attraction to non-Western cultures. Pechstem and his wife set off for the Palau Islands. The group of wood carvings (fig. 29, p. 24) that resulted from this trip is directly related to non-Western prototypes. They bear the mark of direct observation of Oceanic peoples and their ritual carvings; in fact. Pechstein used local carving tools, and many of his works share intes with the works which inspired them.

H LIOBLE A

One of the favored subjects of the German Expressionist sculp, or was the portrait head, which could commanifeate in a highly condensed way all the expressive and psychological attitudes he wished to convey. Even nelists who did no other plastic work, such as Otto Div (fig. 50, p. 25), Kokoschka, and Schiele, were intrigued with nortrait sculpture. Kokoschka's Self Portrait as a Harrior (fig. 31, p. 25), done early in his life, remains one of the stropgest statements of German Expressionist self partraiture in sculpture.22 It reflects Schmidt-Bonluff's belief in "...the head. .[as] the Eath ering point of the whole psyche, of all expression." A The Expressionists' approach to the portrait differed from that used by earlier artists; instead of concentrat ing on commissioned or commemorative likenesses, they chose themselves and their friends - artists, writers unties, dealers - as subjects, or selected literary figures (Lamlet, Don Quivote) whose troubles and concerns mirrored the chaotic feelings and problems if their own era. In these portraits, most of which were east in bronze, Individual characteristics were entphosized. The most compelling of these heads mostly rendered to a frontal attitude - are those which are over-life-size and in which the impact and significance of the subject and its expressive interpretation. are enhanced by the scale. Such sculptures were done by a variety of artists from the teer's through stic burties. Beckmann's Self-Portrait (fig. 32, p. 26, and catno. 29), for example, created on the eye of the artist's persecution and forced exile from his native land, conveys a idacity and power.

I ven to portraits of specific individuals, the German Expressionists were not bound by traditionally accepted notions of artistic likeness or beauty. Bather, they were more interested in capturing the ethos of

Fig. 55 Photograph of Herwarth Walden with his portrait by Wauer (cat. no. 147) their subject, be it the acute intelligence of gallery owner Herwarth Walden as depicted by William Waller (fig. 35, p. 26, and cat. no. 147), or the evocative spirituality of Kathe Kollwitz rendered by her close triend Bartach as part of his Har Memorial for the talistime Cathedral, 1927 (cat. no. 21).

Many of the German Expressionists were involved with architectural sculpture, factory and urban design. and monumental sculpture, in addition to their work on a smaller scale, Barlach's Har Memorial and The Crucifizion by Gies have already been mentioned Another important project, which can be seen today in the form of a re-creation, was Hoetger's 1927 conit 65. sion executed to ad irri the facade of the Gewerk schaftshaus-Volkshaus, Bremen, the Memorial to La bor (fig. 54, p. 27, and eat, nos. 53-58). These eight nonheroic figures represent the exploitation of laborers in capitalist society in the form of weary workers and a worker with a child. One can hardly help but re call Michelangelo's Navy evele; both artists used a series of evocative, gesturing figures to express their sympathy for the downtrodden. These works also Share formal characteristics: a strong rehance on the original blocky form and a contrasting of open gestures with the nutial shape of the block, Just as Lehmbruck's Fallen Man depacted the soldier as the victim of war, and not as a triumy haid victor, 80, 100, did Hoetger focus on the victimized laborer rather than the idealized worker champloned in the mocteenth century by Meranice, Jules Dalon, and Rodin. In this sense the Memorial to Labor is a typical German Expressionist work

A few years later, in 1930, Ernst Barlach received a large-scale commission for what certainly would have been his crowning achievement. The Community of Sands, sixteen over-ble-size figures intended for the tacade of St. Kathermenkirche in Lubeck (fig. 35, p. 27, and cat. no. 22). According to Carl Georg Jeise, then director of the Museum for Kunst und Kulturge-

semente, Lubeck, Barlach's figures were not meant to represent the community of church saints, but rather the struggle and suffering of people trying to find a link Letwien their lives of hardship and the redeeming powers of a higher world. Although this link could not always be found, humanity was always endeavoring to find it,24 Despite the fact that only there of the figures were completed before the Nazis came to power, we know from Barlach's sketches that this cycle would have been a monument to humanity's striving for spirituality.

The Expressionist Rudod Belling derived his reputation in the 1920s in great measure from his architec
turally related works. His "tectome rooms" (now lost),
a kind of Gesainthunstwerk, or total work of art, creat
ed together with architects, resembled soones from
Expressionist films. These collaborations are indicative of the spirit of the twenties, during which the
traditional boundaries between fine and applied art
and among various disciplines were abandoned. The
notion of Gesainthunstwerk became a popular one and
found adherents among artists throughout Europe—
for example, kurt Schwitters and Budolph Steiner—
who all created total art environments of which sculp
ture was an integral part

The Expressionism which flourished in painting in the twenties was characterized by often grotesque, sometimes brutal subject matter, bold coloration, and a dense picture plane it possessed a greater intensity than that of the teens, as can be seen in Felixmuller's Death of the Poet Halter Rhemer, 1925 (fig. 57, p. 28) Yet the sculpture from this same period, whether by Felixmuller himself (fig. 36, p. 28, and cat. no. 37) or by his fellow artists, rarely achieved a similar intensity

This drawing shows the general plan for the miche figures on the west facade of St. Katherinenkirche, Lubeck I make the earlier Brucke period, when the painting sculpture, and printinaking of kirchner. Heckel, and others were so strongly interrelated, an interconnection between two- and three-dimensional representation was not as evident in the twenties. Most of the later Expressionist sculptors were more concerned with examining and reconciling connections between the expressive gestures explored by their predeces sors and a formal language borrowed from other stylistic arenas at this time.

A though several artists represented in this exhibition continued — or hegan — to execute sculpture in the thirties, this was more the exception than the rule Essentially, by the late twenties, German Expressionist

Sculpture had begun to give way to the sculpture of Nene Sachlichken, to work which returned to classical themes and proportions, or to adaptations of Constructivist assemblages of materials. For twenty years the German Expressionists had maintained a total in volvement with the human figure. While sculpturs in other areas had moved away from figuration, the Expressionists examined the human form closely, frequently interpreted it through intense color and bold outlines, hacked it out of row wood, and stretched it to its limits. In so doing, they orchestrated a resonant cry against the Academic tradition in sculpture. It is this legacy which we are only now beginning to recognize and understand.

THEODOR DAUBLER "GELA FORSTER" (1919)

Gela Forster, use Angelica Bruno Schimaz (1892–1957), was a sculptor and founding member of the short lived Dresden Sezession: Gruppe 1919. In 1922, she married Alexander Archipenko and, after a year spent working in Dresden and Berlin, they emigrated to the United States. All of Forster's sculptural work from this period has disappeared, and we know it only from photographs and laudatory contemporary accounts. Among these favorable appraisals was the following article by Theodor Daubler (originally published in the ournal New Blatter for Anist and Dichtung (New Newspaper for Art and Poetry) in June of 1919 and reprinted in Theodor Daubler, Dichtungen and Schriften, Munich: Rosel-Verlag, 1956).

Datalier (1876–1954), a poet and author of the cosmogonic epic Das Nordücht (Northern Lights) (1910), wrote numerous essays on modern art and became a champion of Expressionism. He was close to Barlach and served as the subject for one of that artist's sculptures in 1929. Däubler's art criticism exhibits a spirituality and intensity of tanguage characteristic of literary Expressionism, and it shares with all poetry and writing the fate that such qualities can never be conveved completely in translation. In a collection of essays entitled Der neue Standpunkt (The New Standpoint), published in 1916, Däubler praised modern artists ranging from Van Gogh and Cézanne to Picasso and Marc. The first line of his essay on Marc confirms an essentially Expressionist view of his age; "Our times have a great purpose; a new eruption of the soul," The images reproduced here were included in the original article. Permission to translate it is courtesy of kosel-Verlag, Munich. — PM G

When Chagall allows heads to float about freely or when he sets them backwards on bodles, the sole reason for this is that the artist, in addition to having a vehement sense of color, must also perceive violent actions and give them form. When Delaunay places houses askance, this represents a discovery that has finaily been made: space confined by a frame knows only the logic which governs the boundlessness of nature. Houses which incline toward the central core of a picture, or which in a given plane take both their own and a corresponding form of crystallization - these are not artistic nonsense! On the contrary: the frame should exert its influence. We are now learning to perceive as pedantic an approach that adheres to the laws. of nature. This of course does not mean that from now on one cannot create in a traditional quantier Cubism already provides the basis for a tremendous (nonviolent) organization of the spiritual. Nevertheless: modern art is revolution, not only in an artistic sense, but even more in a political one! Beginning with Van Goglithe most sensitive minds began to foresee, in an uncanny way, the upheavals that we have been experiencing for the past five years. Everything is the prelude to something unprecedented, even if that something has been expected for a long time! Now man does not want to adapt to any conditions, he is crying out. At first always against something. Against everything that exists. Suddenly he also cries out for what he already holds to be attainable. Undergoing severe convulsions!

No modern artist has perceived the rictus of this development in as cold blooded and controlled a manner as Gela Forster in her [sculpture] Man [figs. 4 and 5, p. 35] This is revolution! Those who are passionate eager for life, dare to engage in it. Prophets are often ascetics, revolutionary human beings often have contempt for the sensual. But this is not the case with those who most fundamentally undermine rollen conditions — particularly not with revolutionary artists. They aim for a stimulating effect: they yearn for the arrival of more free and beautiful generations! They are animated by an absolute, a magnificent eros. Love, a sensuous intoxication, shall be victorious over the

conventional, the reasonable. When his vaice becomes that of a man, the young boy cries out in passion; he demands his woman. If he is a complete human being, he is possessed by a desire for erotic ideals, for a more glorious life for his children and his children's children. The rebel is always erope: when he is an artist, he is often sensuous in the extreme. Something of this kind already stands before us in the work of Gola Forster! The entire sculpture climaxes in a cry. The sculptor has reduced the head to its most primitive, the egglike shape of the skutl; it has become the bearer, we can even say the revealer, of a tragic mouth. Eyes, nose have been incorporated into the mouth. The sexual agitation and, in the behavior of the limbs, the spiritually expressed aghation of this symbolic man are pressing toward only one goal: to declare a head with such a mouth to be artistically possible now, yes, self-evident, proven by logic. Actually, a bronze! In spite of the missing legs and feet. Rodin's headless Halking Man [fig. 11, p. 18] was also cast. In this magnificent work the head is missing, so that the observer is shaken by a realization: the idea proceeds. though the head has been struck off. (Originally the sculpture represented John the Baptist.) In Gela. Forster's intense sculpture the sensation rises. powerfully: gway with the feet, the cry (once sounded) resounds through the entire world.

Rottinff Picasso [sie] has gained a deep understanding of African sculpture; Schmidt-Rottinff has also seen it. Gela Forster was able to perceive it fervently. The nativete in the sculptures of wild or semiwid peoples (I am not speaking of the Benin) has had a much stronger effect on modern artists than have the statues of those races who disappeared long ago. But for none of these artists can we establish a dependence on the creations of distant but surviving tribal cultures.

Gela Forster's female statues Conception [fig. 1, p. 51] and Awakening [figs. 2 and 5, p. 52] express [Fig. 1] [Fig. 1] [Fig. 2] [Fig. 2] [Fig. 2] [Fig. 2] [Fig. 2] [Fig. 2] [Fig. 3] [Fig. 4] [Fig. 4]

experiences with which we are quite familiar. As a consequence these sculptures appear barbarie to us, vet vigorously and spontaneously perceived - not constructed, heaped together, oppressive. The technique employed in these female forms is highly interesting. it provides a definite contrast to that seen in the aforementioned sculpture, Man. In the latter we find an almost elegant and simultaneously strong rhythm, in the geometrical sense. The clearly delineated head corresponds, in nearly measured fashion, to the two halves of the buttocks. In the case of female figures, particularly in Awakening, a greater compression is noticeable. The sense of style is less strained. The treatment of the skin is rough in al. sculptures, but pronouncedly so with the female ones. Yet Gela Forster in no way imitates Rodin's impressionistic techrique. Neither are we dealing principally with a treatment of the skin in her work, as in the work of Medardo Rosso,2 This artist wanted to sculpt simlight he was less concerned with "human beings"; for him they were at best carriers and bearers of light. Bodin had an excellent command of the interplay of shadows. He created his own mode of presenting "skin." He too began with the sculpture of Rosso and Carpeaux.3 Gela Forster again confronts us with the problem of "skin" in her three sculptures. She has already solved it for berself in an exciting and very independent way 36 NO 493 DEF 18 DECEMBED A TRACE 1940 OF OUTO 2010 OF TO C

CARL EINSTEIN: EXCERPT FROM 4FRIC IN SCULPTURE (1915)

Carl Einstein (1885–1940) was one of the most important writers and critics associated with German Expressionism. He established his reputation in 1907 with his novel *Bebuquin*, which was initially serialized in the periodical *Opale* and published in book form by Verlag Der Sturm in 1912. In addition, he translated Van Gogh's letters into German in 1914 copublished the bitter and satureal magazine *Der blutige Fenst (Bloody Seriousness)* with George Grosz; coedited the *Europa Almanach* in 1925 with Paul Westheim; and in 1926 wrote his famous volume *Kunst des 20. Jahrhunderts (Art of the Treentieth Century)* as part of the *Propylaen Kunstgeschichte (Propylaen History of Art)*, a highly important multi-volume reference work. In 1929, Einstein moved to France where he continued to be active as an editor, writer, and critic, and in 1936 he joined the Republican forces in Spain to fight against Franco. After twice being interned in France, he committed suicide in 1940 at the French-Spanish border as German troops approached.

The excerpts translated here are taken from Einstein's *Vegerplastik (Ifrican Sculpture)* (originally published in 1945 by Kurt Wolff Verlag, Munich), the first book to deal exclusively with the subject of African sculpture. Although in light of our present state of ethnological awareness many of the premises in Einstein's text necessarily appear unfounded and extremely romantic, it was nonetheless significant for its extremely positive endorsement of such work. Amphification, as opposed to a strictly logical argument, serves as the primary persuasive strategy in Einstein's text and suggests the impassioned stance be maintained toward his subject. The intensity and mimediacy of emotional impact and the powerful simplicity which he ascribes to African sculpture are among the qualities which attracted the Expressionist artists – especially the members of the Brücke – to the works of African and Oceanic peoples. – PW.G

Religion and African Art. African art is, above all. rehanous. The Africans, like any ancient people, worship their sculptures. The African sculptor treats his work as a deity or as the deity's custodian. So, from the very beginning, the sculptor maintains a distance. from his work, because the work either is or contains a god. The sculptor's labor is adoration from a distance. And thus the work is, a priori, independent. It is more powerful than its maker, who devotes his full intensity to the scutpture and thus, as the weaker being, sacrifices hunself to it. His labor must be described as rebglous worship. The resulting work, as a deity, is free and independent of everything else The work will never be involved in human events, except as some thing powerful and distanced. The transcendence of the work is both determined by and presumed in religion The effect lies not in the artwork, but in its presumed and undisputed godliness. The artist will not dare to vie with the god by striving for an effect; the effect is certainly given and predetermmed. It makes no sense to regard such an artwork as striving for an effect, especially since the idols are often worshiped to darkness

The artist produces a work that is autonomous, transcendent, and not intervoven with anything else. This transcendence is manifested in a spatial perception that excludes any act by the viewer; a completely drained, total, and unfragmentary space must be given and guaranteed. Spatial self-contamment does not signify abstraction here; it is an immediate sensation. Wholeness is guaranteed only if the cubic [i.e., solid, three-dimensional] is achieved totally, that is, if nothing can be added to it. The activity of the viewer is entirely orbited.

A characteristic feature of African sculptures is the strong autonomy of their parts. This too is determined by religion. The sculptures are oriented not toward the viewer but in terms of themselves; the parts are perceived in terms of the compact mass, not at a weaken-

ing distance. Hence, they and their limits are reinforced

We also notice that most of these works have no pedestal or similar support. This lack might come as a surprise, since the statues are, by our standards, extremely decorative. However, the god is never pictured as auxiliance but a self sufficient being, requiring no aid of any kind. He has no lack of pions, venerating bands when he is carried about by the worshiper

Such an art will seldom reify the metaphysical, since the metaphysical is taken for granted here. The metaphysical will have to be mainfested entirely in the complete form, concentrated in it with amazing intensity. That is to say, the form is treated in terms of extreme self-containment. The result is a great formal Formal realism, which is not construed as unitative naturalism, has a given transcendence; for mutation is impossible: whom could a god imitate, to whom could be subjugate himself? The result is a consistent realism of transcendental form. The artwork is viewed not as an arbitrary and artificial creation, but rather as a mythical reality, more powerful than natural reality. The artwork is real because of its closed form; since it is self-contained and extremely powerful, the sense of distance will necessarily produce an art of coormous intensity.

While the European artwork is subject to emotional and even formal interpretation, in that the viewer is required to perform an active visual function, the African artwork has a clear-cut aim, for religious reasons beyond the formal ones. The African artwork signifies nothing, it symbolizes nothing. It is the god, and he maintains his closed mythical reality, taking in the worshiper, transforming him into a mythical being, annulling his human existence.

For the artwork to have a delimited existence, every time-function must be omitted; that is, one cannot move around or touch the artwork. The god has no ge-

net,e evolution, this would contradict his valid existence. Hence, the African has to find a depiction that without the use of surface relief, shows a prous and nonindividual hand and instantly expresses it in solid material. The spatial viewing in such an artwork must totally absorb the culic space and express it as something unified; perspective or normal frontably is out of the question here, they would be impious. The art work must offer the full spatial equivalent. For it is timeless only if it excludes any time-interpretation based on ideas of movement. The artwork absorbs time by integrating into its form that which we experience as motion.

Viewing Cubic Space... African sculpture presents a clear-cut establishment of pure semptural vision. Sculpture that is meant to render the three-dimenstana, will be taken for granted by the naive viewer. since it operates with a mass that is determined as nass in three dimensions. This task appears to be diffleuit, indeed almost impossible at first, when we realize that not just any spatiality, but rather the threedimensional, must be expressed as a form. When we hink about it, we are overwhelmed with almost indescribable excitement, this three-dimensionality. which is not taken in at one glance, is to be formed not as a vagae optical suggestion, but rather as a closed, actual expression. European solutions, which seem makeshift when tested against African sculpture, are familiar to the eye, they convince us mechanically, we are accustomed to them. Frontality, multiple views, overall relief, and sou ptural silhoueth, are the most usual devices.

Frontably almost cheats us of the third dimension and intensifies all power on one side. The front parts are arranged in terms of one point of view and are given a certain plasticity. The simplest naturalistic view is chose if: the side closest to the viewer, orienting him, with the aid of habit, in terms of both the object and the psychological dynamics. The other views, the subordinate ones, with their disrupted rhythms, suggest the sensation that corresponds to the idea of three dimensional motion. The abrupt movements, tied together mainly by the object, produce a conception of spatial coherence, which is not formally just fied

The same holds true for the silhouette, which perhaps supported by perspective tricks, hints at the culic. At closer inspection, we see that the silhouette comes from drawing, which is never a sculpturaelement

In all these cases, we find the technique of painting or drawing; depth is suggested, but it is seidom given innitedlate forth. These approaches are based on the prejudice that the cubic is more or less guaranteed by the material mass and that an inner excitement circumscriping the material mass or a unitateral indication of form would suffice to produce the cubic as a form. These methods aim at suggesting and signifying the sculptural, rather than going all the way, let this is not possible along these lines, since the cubic is pre-

Fig. 6
Car. Einstein and Dr. Eichhorn.
director of the Ethnographic
Museum of Berlin, inspecting
the Flechtheim Collection

Sented as a mass here and not immediately as a form Mass, however, is not identical with form; for mass cannot be perceived as a unity; these approaches always involve psychological acts of motion, which dissolve form into something genetically evolved and entirely destroy it. Hence, the difficulty of fixing the third dimension in a single act of optical presentation and viewing it as a totality; it has to be grasped in a single integration. But what is form in the cubic?

Clearly, form must be grasped at one glance, but not as a suggestion of the objective; anything that is an act of motion must be fixed as absolute. The parts situated in three dimensions must be depicted as simultaneous, that is, the dispersed space must be integrated in the field of vision. The three-dimensional can net ther be interpreted nor simply given as a mass. In stead, it has to be concentrated as specific existence, this is achieved when that which produces a view of the three-dimensional and is felt normally and naturalistically to be movement is shaped as a formally fixed expression.

Every three-dimensional point of a mass is open to infinite interpretation. This alone makes it almost impossible to achieve an unequivocal goal, and any totably seems out of the question....

The African seems to have found a pure and valid solution to this problem. He has hit upon something that may initially strike us as paradoxical: a formal dimension.

The concept of the cubic as a form (only with this concept should sculpture be created, not with a material mass) leads directly to determining just what that form is. It is the parts that are not simultaneously visible; they have to be gathered with the visible parts into

a total form, which determines the viewer in a visual act and corresponds to a fixed three-dimensional viewing, producing the normally irrational cubic as something visibly formed. The optical naturalism of Western art is not an imitation of external nature. Nature passively copied here, is the standpoint of the viewer. This is how we understand the genetic evolution, the unusually relative quality of most of our art. European art was adjusted to the viewer (frontality, perspective); and the creation of the final optical form was left more and more to the actively participating viewer.

The task of sculpture is to form an equivalent absorbing the naturalistic sensations of movement, and thus the mass, in their entirety and transforming successive differences into a formal order. This equivalent has to be total, so that the artwork may be left, not as an equivalent of human tendencies directed elsewhere, but rather as something unconditionally self-sufficient....

We have stressed that sculpture is a matter not of naturalistic mass, but only of formal clarification. Hence, the invisible parts, in their formal function. have to be depicted as a form; the cubic, the depth quotient (as I would like to call it), has to be depicted on the visible parts as form; to be sure, only as form, never blending with the objective, the mass. Hence, the depiction of the parts cannot be material or painterly; instead, they must be presented in such a way as to become plastic, a way that is naturalistically rooted in the act of motion. Bxed as a unity and visible simultaneously. That is to say: every part must become sculpturally independent and be deformed in such a way that it absorbs depth, because the conception. appearing from the opposite side, is worked into the front, which, however, functions in three dimensions. Thus every part is a result of the formal presentation, which creates space as a totality and as a complete identity of individual optics and viewing, and also rejects a makeshift surrogate that weakens space. turning it into mass.

Such a sculpture is strongly centered on one side, since this side manifestly offers the cubic as a totality, as a result, while frontality soms up only the front plane. This integration of the sculptural is bound to create functional centers, in terms of which it is arranged. These cubic points centraux (central points) instantly produce a necessary and powerful subdivision, which may be called a strong autonomy of the parts. This is understandable. For the naturalistic mass plays no part, the famous, unbroken, compact mass of earlier artworks is meaningless, moreover, the shape is grasped not as an effect, but in its immediate spatiality. The body of the god, as dominant, cludes. the restrictive hands of the worker, the body is functionally grasped in its own terms. Europeans frequently criticize African sculpture for alleged mistakes in proportion. We must realize that the optical discontinuity of the space is translated into clarification of form, into an order of the parts, which, since the goal is plasticity, are evaluated differently, according to their plastic expression. Their size is not crucial, the decisive feature is the cubic expression assigned to them and which they must present no matter what

However, there is one thing that the African eschews, but to which the European is led by his coinpromise, the modeling interpolated in the elementary; for there is one thing this purely sculptural procedure requires definite subdivisions. The parts are virtually subordinate functions, since the form has to be concentratedly and intensely elicited in order to be form; for the cubic, as a result and as an expression, is independent of the mass. And only that is permissible. For art as a qualitative phenomenon is a matter of intensity; the cubic, in the subordination of views, must be presented as tectonic intensity...

I would like to add something about the group. The group visually confirms the previously stated opinion that the cubic is expressed not in mass but in form. Otherwise, [the group], like any broken sculpture, wound be a paradox and monstrosity. The group constitutes the extreme case of what I would like to call the remote scutptural effect; at closer inspection, two parts of a group relate no differently to one another than two remote parts of a figure. Their coherence is expressed in (their) subordination to sculptural integration, assuming that we are not dealing simply with a contrasting or additive repetition of the formal theme. Contrasting repetition has the advantage of reversing directional values and thus also the meaning of sculptural orientation. On the other hand, juxtaposition shows the variation of a sculptural system within a visual field. Both are grasped totally, since the given system is umfied

CARL GEORG HEISE: "THE CRUCIFIX BY GIES" (1921)

Carl Georg Heise (1890–1979) was cofounder with Hans Mardersteig of the important Expressionist art journal Genius (1919–21), which was published in Munich by Kurt Wolff Verlag. In 1920, he assumed the directorship of the Museum für Kunst und Kulturgeschichte, Lübeck, and soon established himself as one of the outstanding museum directors of the period. In 1930, he commissioned Barlach to sculpt a series of sixteen larger-than-life-size figures for the facade of the Gothic brick St. Katherinenkirche in Lübeck (see cal. no. 22). He also was responsible for commissioning Sintenis' Daphne (cat. no. 155), which was installed in the sculpture garden of the Behn Haus, Lübeck, Heise's support of the Expressionists and of Edvard Munch occasioned many attacks from the local press and in 1930 he found it necessary to defend himself and his acquisition policies in a special publication.

When the Nazis gamed control in 1933, Heise was dismissed from his museum directorship and placed in "retire ment" He then became an art critic for the Frankfurter Zeitung until the Nazis removed him from this post. From 1939 to 1945, he worked as a reader for Gebt. Mann Verlag in Berlin, and in 1945, following the War, he was appointed director of the Hamburger Kunsthalle and became a professor at the Universität Hamburg – positions which he held until 1955

Heise's "Der Kruzifixus von Gies" ("The Crucifix by Gies") was originally published in *Genus*, vol.3, no. 2, 1921, pp. 198 – 202. The creator of the crucifix, Ludwig Gies (b. 1867), was well known for his small sculptures and med als. He was a professor at the Berliner Hochschole für freie und angewandte Kunst from 1917 until 1937, when he was dismissed by the Nazis. In 1950, he accepted a professorship at the Werkschule in Cologne. – P.W.G.

Lugwig Gies' erneiby was created as an entry for the war-memorial competition of St. Maneukirche in Lubeck. As was to be expected, the jury and the church board did not give the work serious consideration. For a moment it seeined as if the upper hand would be gained by the artistically educated members of the congregation's progressive governing body; they stuod up for Gies' work with great warmth and energy. The crucifix temporarity found an ideal place in the ambulatory of the cathedral. At the same tone, however, a controversy about art ensued that excited people to the boiling point; its conclusion was made memorable by the wanton mutilation of the work. The Lead was knocked off and dumped into the milly ond

Thank God, it was found and successfully restored Then the eruciny adorned the hall of the Baunaus at the Deutsche Gewerbeschau in Munich, Taken from its very dignified location, where it stood in the midst of life as the practical fulfillment of an artistic task of an important kind, uprooted by a referendum and returned to the art trade of the day as a wandering exhibition piece. It is hard to determine what is more significant, the work itself or its fate, its existence is a testament to the infiltration of Expressionist form by a strong and particular religious emotion, and to the competent craftsmanship of a modern sculptor to the service of a noble and timeless purpose. Its destruction, however, testifies to the increasing discrepancy between popular feeling and artistic culture in our time - to the dangerously increasing gravity of the situation we are in. Both aspects ment serious consideration

The work was created for a spacious church have of the north German Gothic brick style. It respects this fact in structure, rhythm, and mood. The specificity of this task has dictated the fundamentals of form and craft. The austere artistic language of the energelieally drawn contours and violent contemposto is not fashionable deviousness, rather it adapts to the picturial adornment of the Gothic period in conscious, voluntary affinity. The exacting simplification of all motifs is never stammering primitivity, but is intentionally directed toward achieving particular aesthetic effects. The acute triangular form of the pulled up knees, the pointed chin, the straight, upward pointing fingers of the right hand are all new elements of an expressive feeling for beauty which is very much personally determined. And the spiritual values are also of such deep and individual quality - particularly striking in such a frequently treated subject - that they alone would make the work one of the most valuable documents of contemporary religious experience. The artist did not shy away from rendering the agonies of death in a moving, drastic manner. Everything seems to show pain and torment. Let in the compassionate

bowed head, in the right arm's subdued gesture of blessing, the idea of sacrifice has gained such an urgent form in so touching and conciliatory a manner that sorrow and the conquest of sorrow are united in a majestic image of redemption. It would be hard to find a symbo, that would impress posterity more powerfully and deeply with the meaning of the World War and its fallen heroes.

The material, too, adapts to its surroundings; it is wood, which we have long been unaccustomed to using for works of such monumental dimensions Thus the crucifix of 1921 becomes closely akin to the lifteenth-century cross of triumph. In collaboration with the sculptor Hitzberger,1 the forms have been hewn out of a few huge oak planks, and in each individual form one feels the spirit of the material. The coloring is reserved, nowhere has the character of the wood been destroyed; the body has been stained a green-blue, the planks of the cross and the drops of blood, red; only the rays and the nimbus have been gilded. Ghostlike, the polished plate of the nimbus reflects the green co.oration of the head. This excellence in craftsmanship has symptomatic meaning: the more readily it is accepted that the time of the individual creator, the great master, is over, the more we welcome a renewal of the principles of craftsmanship. They alone can slowly prepare the ground for a new blossoming of the highest personal achievement.

The work was hung in the ambulatory of the Lübeck cathedral – against a plain white wall, the right hand s blessing a phantasmal silhouette before the tall thurch window. The effect was astonishing. An

and and spirit proved to be equal to the architectural power of the Middle Ages. For in comparison, the work did not disappoint; it formed a harmonious sound with window, pillar, and cross vault. The seeming arbitrariness of intensely personal creativity derived [its] laws and proportions from the surrounding architecture. Anyone familiar with the tasks of practical art administration knows what this placement means. It marks the moment in which desire and effort turn into fulfillment and masters. In this seems to lie the ultimate significance of Gres' crucifix, which extends for beyond its artistic value as such. He has made visible hts long desired, finally achieved stage of development.

Let visible for whom? Can we speak of fulfillment and of having achieved a goal when only a few people. share in it; when the masses not only remain blind, but reject, condemn, rage, stone? The newspapers started the controversy; the defenders remained in the minority, the adversaries spoke of biasphemy, of folly, of a public disgrace that demanded expiation. They are the ones who are responsible for the mutilation. Not the tanaticism of an individual, but the indignation of the crowd passed sentence. As when in the case of political murder, the perpetrator is the instrument of blind mass hatred, in this instance the head of the Christ fig. are fell as the blatant expression of the people's rage. The masses revolt against art. The long-suppressed indignation reached its height at the moment when, in the opinion of art lovers, a truly popular, practical task had been completed in a surprisingly satisfying manner. It is easy and customary to shrug off this hate. filled discord between art and life by compassionately referring to the artistic parrow-mindedness of the masses. But this attitude only betrays a narrow minded view of the world itself. To feel no urge to change this fatal condition is to lose every right to intervene as a supporter of art in the relationship between art and people

Many a mitigating argument will be advanced against anyone who emphasizes this conflict which, increasing from decade to decade, reduces the fundamental effectiveness of the best of our new generation of artists. It will be argued that good new art has never been popular at the time of its origination; that the master has always been ahead of the crowd, that prophets have always been stoned. That is certainly true. But is art prophecy? Certainly the Greek art of the Periclean age did not find such resounding resonance in every contemporary as in our textbooks today, two thousand years later, but a wait-and-see attitude is far from hate and the rage of destruction. And who could possibly believe that an Atheman of the Golden Age might have desecrated the image of a god out of artistic fanaticism? A Raphael or a Rubens creat ed in the lunelight of his fame, during his own lifetime - not in great popularity, but enthusiastically supported by the most powerful on earth. A Michelangelo, a Rembrandt became lonelier the higher he rose, but the favor of the people followed closely behind him. The people did not always understand in depth, but

Fig. 3

their understanding nevertheless was so fertile that the unmatched achievement of individual artists was able to define popular artistic conceptions of future. epochs. This is no longer the case. After the slow decline of the Biedermeier spirit,2 no uniform style could affirm the existence of a common culture. Culture and art have declined to such an extent that even in the nineteenth century the illusion of a congenial taste only served to maintain the pretense of a uniform. popular culture. The renaissance of the arts that then ensued took place for masters and connoisseurs only. in isolation from decisive world events. Since that time, the gap between people and art has widered Considering conflict of the belligerence that was displayed in the Gies affair, this gap appears to have become unbridgeable. For a long time it was thought that what might be interpreted as necessary martyrdom would prove in the course of time to be an unavoidable absence of broad influence. Today such false pride in suffering must appear untimely to every intelligent person. However, the fact that Manet's and Cézanne's, Leibl's and even Liebermann's art is beginning to be canonized on the art market and by the critics, should not mislead us into assuming that this art has ever been truly popular —or that it ever will be it remains the concern of a small group of initiated connoisseurs. The separation of art and people is becoming greater, rather than diminishing

more convincing. The art of our time supposedly has not reached its full zenith - so say the obliging intermediaries – it is a transitional product with all its weaknesses, but also with all the fascination of being ahead of its time. The artwork of the future, existing within it in embryo, should be venerated. For what could be more blissful than the first days? Archaic. works of art of all styles and all cultures are being rediscovered as relatives, proving a point - only the coming decades of posterity will disclose the deepest meaning of the present. This may be true But prophecy and desire are poor consolation for insulficient visible evidence. And does the enthusiasm of the artists and their chorus not all too often exhaust itself, even in relation to historic art, in admiration of something that is not mature, something that is not the goal. but only a groping toward the goal? Do not misunderstand me: this argument, which the best succumb to and which has become the leacher of us all, can bring 2. Biedermeier. Term for a brief artistic period occurring fround the middle of the mineteenth century, primarily in Germany and Austria, which might be characterized as diminished Classicism. The term derives from two honesolent but provincial types created by Victor von Scheffel in the caricature journal Flugende Rigiter in 1848. While in general works on art history, the Bococo is considered to be the last

A second argument, however, appears to be almost

5. Withelm Leibi (1844–1900): A teading late intrepentitiventury German Realist painter intenately associated with the Munich School Max Liebermann (1847–1955): German Impressionist painter who founded the Berlin Secession and was its president from 1898 to 1911. Ed.

true European style, in Central European art historics, the

Bredermeier plays the same role - Fd

about the blood transfusion necessary to an aging culture. But would it not be wrong to demand that during this severe crisis the untrained person who enjoys not with his intellect, but with his pure instinct, be raised to lofty heights and deeply moved by such works of art? There exists no intellectual excuse sufficient to obscure the distance of the arts from the living participation of the people.

It would certainly be wrong if, frightened by this msight, one attempted to change art by force. On the one hand, a thoughtful feeling of responsibility prevents us from joining in the praises of present conditions, which open up ever more grotesquely the conflict between art and the judgment of the layman. On the other hand, a deeper insight into the developmental context prevents us from engaging in a foolish fight against symptoms which are not the cause but the effect. It keeps us from condeniuing the artists who, in greatest personal honesty, are under the spell of their declining century. They are not the girlly ones, but we are, not their art is responsible, but our world view. To he more precise, our lack of ideological creativity. Only our changed heart can change art. No sculptor will be able to creatively bring about a new vision of the world, to demand this would be to place too high a value on the importance of the fine arts. The artist's obligation of leadership does not extend beyond making visible the best and deepest aspects of the dominating spirit. This makes us fully aware of how little. we are served today by the increasing participation of the general public in artistic problems; it shows us to how small an extent the overrating of art can initiate a transformation of the spirit. The determination of the existence of errors that does not point to any means for their correction may appear to be useless arrogance. But reflection on art should not lead to philosophical dileitantism. That has caused us enough harm. Our task can only be to define the value and the place of a work of art to the best of our knowledge. In the case of Gres' crucifix an attempt of this kind necessarily leads. to evidence of a great achievement and its necessity, as conditioned by its time. Nobody will be able to overstep with impointly this stage of artistic development. Every advancement has to take this road. Communines cannot be too strongly impressed with the fact. that their active support of such attempts is essential to progress beyond the hanal and imitative religious. art of the past decades. When understood correctly, the attainment of such progress may be seen to be in the church's own best interest. But it is ultimately unportant for us totally to accept the fact that so far no goal has been reached. The heart blood of the noblest is flowing, but up to now it has been shed without guilt, and in vain

P.R. HENNING:

"CLAY - A MANIFESTO" (1917)

While living in Switzerland, Paul Rudolf Henning (b. 1886) wrote "Ton – Ein Aufruf" ("Clay – A Manifesto") as part of a larger work on modern art published by the Kunsthaus Zürich in 1917. It was reprinted both as the second pamphlet produced by the Arbeitsrat für Kunst in 1919 and in the journal *Vittedungen des Deutschen Herkbundes*, no. 5, 1919–20. In 1980, it was again reprinted by the Akademie der Künste, Berhn, in the catalogue for its exhibition entitled trbeitsrat für Kunst 1918–1921.

The overwhelming majority of sculptures produced in the period prior to the emergence of the Expressionist movement had been executed in stone, especially marble, or in bronze. Only with the Expressionists did wood again come into widespread use as a sculptural medium, in this article, Henning argues forcefully for a wider use of clay in sculpture — especially in the form of terracotta. He himself made terracotta sculptures (see cal. no. 51), as well as a number of very large rehefs for various buildings in Archen, Cologne, and Berlin, but his advoracy of clay as a sculptural medium had only a slight effect beyond his own endeavors. This article is typical of the fervor and the vision of the future which dominated artists' writings of the period, For additional information on Henning, see this catalogue pp. 98–99, Permission to translate this essay is courtesy of Paul Rudolf Henning and the Akademie der Minste, Berlin, — P.W.G.

Earth that can be molded and fired presents inexhaustible possibilities for creating plastic values of the strongest effect. In spite of this, "works of clay" are extremely rare, in fact almost nonexistent, among modern sculptures. Stone, bronze, or wood - the "nobler" materials - are given preference, although clay is likely to be found in the workshop of every sculptor. The reason for the rarity of cerainte sculpture is ner ther the anavailability of the material nor the technical difficulty of the firing process, but rather the fact that today's artists, in spite of their doily handling of 'clay, are completely removed from actually working. with its specific qualities. They have lost all feeling for modeling clay according to its nature; they have become blind to clay. Its greatest advantage - namely its plastic possibilities – has forced it into subordina tion in relation to other materials. Taken out of the clay box, molded on a skeleton of wood, iron, or wire, treated with all kinds of tools, it becomes the shape, the model, for an "original" work of art. This model, though made from clay, is anything but earthen, having been knowingly used by the artist as a model for another material, as a means of experiencing a dilferent kind of material altogether - stone, bronze or wood. In other words, the clay model's only purpose is to create and facilitate flexibility of creative composi-Lon within a different medium. After the plaster cast, the negative, has been taken from the clay model, it is worthless. It is cut to pieces, destroyed to the point of unrecognizability, thrown back into the clay box to belater resurrected in another model for another "origirial." The plaster mold is the only durable bearer of the work - from it the real original anses directly or indirectly Even the few sculptors who present us with figures or other ceramic works make use of the plaster. cast without much ado.1 It is therefore no wonder that in the course of time sculptors have lost all understanding of clay's inherent properties and, no longer. able to disclose its possibilities of artistic expression, do not use clay anymore. Although no technical arguments can be advanced against the use of negatives DU DRUM DEDUGO AR DER ODGESO RUDER DER URGER DO I. The mindless adoption of the convenient and amiable plasor form is the cause of the decane, of the low level of today's art of sculpture - P.R. II.

in the making of ceramic works, as long as the end result possesses the absolute quality of clay, such use provides no basis for creating or even promoting the understanding of clay's specific qualities. But as soon as we remember that clay, directly shaped by hand, formed into hollow bodies of a thousandfold variety. can be fired as a true original, then the greatness of its specific qualities will stimulate us to take advantage of the unprecedented freedom that the use of clay gives us - a freedom that can be increased to reach incredible proportions. The experience of this freedom overwhelms anyone who has been in a position to witness the emergence of such original works of art, and weneed not be materialists to want to free a kind of mate. rial from its worst servitude and to lead it back to its original wealth of creative possibilities. Only then will the sculptor speak a powerful, free, and above all immediate language of form; he will experience, as in a new dimension, things he never dreams of

If we want to create compositions that stand independently, that is, in a more or less upright position,
then we have to begin from the base, molding the phable, shapable clay into hollow or solid forms from the
hottom upward. We thus literally realize the idea of the
construction and experience static forces with our
senses. By considering the weight of clay itself and
how it can be built up or extended in individual or
combined forms, forms originate which correspond to
the laws of static forces and which are specific to the
nature of clay - works of art are born, communicating
the rhythm of their inner construction. Herein lies the
main element of the "completely formed" terracotta

Another aspect is the *plastic* interpretation of clay. This quality is increased many times as so in as we abandon our idea of pure statics, as soon as we completely neglect the laws of gravity, beginning with any kind of form and developing the creation of this form in all directions, adding on in the process. Because as long as one maintains the connections between the inner hollow spaces, one is able to "pot together" any plastic idea. An entire network of pipes or discs of clay, or whatever one may call them, may appear before our eyes, les, eyen separately shaped, individually fixed pieces may be connected by seams — a language of

sculpture which has no equal! And in addition, there is our basic ability to enliven the physical surface of the clay original by way of contrast, the subtractive function, the cuiting out of the clay wall, this piercing, this true clay-quality, this making "the hollow" visible, the shard audible! The expression of a work of art can be increased to vehement heights by means of this chythrme piereing and by the inclusion of something so far ammentioned: color. The fired piece of clay will have different colors depending on the kind of earth used. on the nuxture of different kinds of earth, on the admixture of chemicals, etc. Apart from this color of its own, terracolta can be given color in a number of different ways. In addition to the simple technique of painting the work with color, there are, of course, transparent and opaque, shiny and dull glazes that may be applied - glazes that in the firing process combine with the clay and become permanent. The spectrum of color has been steadily extended through the untiring efforts of chemistry and now affords our art-1sts a choice of countless combinations. In addition to the painted terracotta, monochrome glazed sculpture has been preferred by the past era of artistic mutation.

Equally, let us realize how much our means of expression is enriched as soon as we break the bonds of the merely "imitative." For then we may take up a linear, spatial, or multicolored approach to ceramics. either emphasizing or denying the plastic form itself. Thus clay, in boundless freedom, opens the road to the alistract, the purely spiritual. Manifestations which are yearning for life find in clay incomparably fertile. ground for form, color, and architectoric structure. The immediate unification of feetonics and color with the plastic cannot be valued too highly when we speak of clay. Our ability to produce weatherproof ceramics. has suddenly made architectural applications possible. In addition to glass as a colorful building material. (see Taut's glass house), clay will bring joy to those architects who want to redeem manking from the deadly gray-on-gray of our emes.

2 Brinto Taut (1880–1958) One of the few Expressionist architects. For the Ausstellung des Deutschen Herkbundes of 1914 in Cologne, Taut bodt a "glass house" for the Luxfer-Prismen-Syndical that inflacenced many younger architects. It was built of steel, cement, and colored glass and had glass mosaics as floors. Taut attributed his love for glass partly to the poems of Paul Scheerbarth, which were published under the title of Grasgrahitektur (Glass Architecture) in 1914. Scheerbarth believed that glass walls would improve humanity since people would be usable to one another most of the time. —Ed

L. DE MARSALLE:

"CONCERNING THE SCULPTURE OF E. L. KIRCHNER" (1925)

Loms de Marsalle was the pseudonym adopted by Ernst Ludwig kirchner for several essays and articles he wrote on the subject of his own work. In 1920, the highly sensitive kirchner first employed this noin de phinne in an article entitled "Zeichnungen von E. L. Kirchner" ("The Drawings of F. L. Kirchner"), which appears d in the important art journal *Genus*. This article was illustrated with twenty-one of kirchner's drawings. Other "de Marsalle" publications included. "Under kirchner's Graphic Work"), Genus, 1921, "Under the Schweizer Arbeiten von E. L. Kirchner' ("Concerning Kirchner's Swiss Period"), the foreword to the catalogue of an exhibition of his works held at the Galerie Ludwig Schames in Frankfurt in 1922 (reprinted in Europa Almanach in 1925); and "Über die plastischen Arheiten F. L. Kirchner's "Concerning the Sculpture of E. L. Kirchner"), Der Licerone, vol. 17, no. 14, 1925, pp. 695–701, which is translated here. The images reproduced as figures 1—3 and 5 – 7 were included in the original article. Kirchner wrote two additional catalogue introductions under this pseudonym, one for an exhibition of his work held at the Galerie Aktuaryns, Zurich, in 1927 and one for an exhibition held at the Kunsthalle Bern in 1955 – at the time, the largest exhibition of Kirchner's work ever held,

In choosing his pseudonym, kirchner created a French critic who openly admired his German style. Although he never revealed his reasons for adopting this disguise, it is generally agreed by scholars that the choice was made as a conscious attempt on Kirchner's part to counter the widely held opinion that modern art both originated and experienced its zenith in France Permission to translate this essay is courtesy of Dr. Wolfgang Henze. Campione of Halia -- P.W.G.

When one frequents the workshops of creative art ists, one often experiences surprises. When it visited the studio of E. L. Kirchner one day, I found there a number of sculptures of all sizes and of different kinds of material – sculptures kirchner was using to explain his idea of sculptural form to a young artist.

Although some museums and private collectors own a few of his pieces, Airchner's piastic work is almost unknown, and I believe It is finally time to publish something in relation to it. kirchner's sciipture is not only of great importance in regard to bis own work but during the past years has also had a stimulating effect on a number of young artists. Thus it seems to be in a position to initiate a new movement in the very back. ward sculpture of our time. As far as I know, Kirchner is in our day the only sculptor whose forms cannot be traced back to classical antiquity. Just as in his paint ings, he gives his experiences direct form in characters taken from contemporary lite. His sculpting began simultaneously with his painting, thus going back to the year 1900.4 Both modes of artistic expresston ran so clusely parallel to one another and so completed each other that, in many cases, the same problein is addressed in the paintings as in the sculptures. Atrebuer's still lifes and interiors often contain figures. that he has sculpted earlier. Thus he transposed a form from one mode of artistic expression to another, until he found the solution offering the strongest expression. In this manner, Earthner gamed the insight that the intensive study of nature and the assistance of the imagination could create a new form farstronger and of more intense effect than a naturalistic rendition. He discovered the hieroglyph and euriched our modern period with an important means of expression, just as in their own time Seural invented the touche, the breaking up of color, and Gézanne the system of the cylinder, cone, and sphere.

Airchner's sculptura, efforts, which extend over a period of twenty-five years, very clearly show his

Lift offit, it [1] the 1-1 fit [1] by the 1-1 fit [

development in this respect. Already the early, wooden Grouching Homan, taken as a total composition, is an absolute hieroglyph of the term Grouching. The composition of the body, which has been condensed into the cube, could not have been rendered more in tensely or innequivocally. At the same time the figure possesses great hydriness. However, these works of Kirchaer have bardly anything in common with what one nowadays refers to as sculpture. They are as far removed from the Greek as from the African, for they are born from the immediate perception of today's life Certainly, it is a long way from this early Grouching Homan to the Friends [fig. 5, p. 40] or the Lovers [fig. 5, p. 55]. But the thread of development is nowhere interrupted.

It is most significant that from the very beginning hirchner rejected as inartistic a working method generally practiced by sculptors today, namely, proceed ing from a clay model by way of a plaster impression to the actual material. He creates his figures directly out of the material. One has to realize that in the case of the old working method, only the clay model is actually created by the artist, whereas the end result and all work toward it is done by other hands. In light of this, the disinal uniformity of our sculpture exhibitions becomes readily comprehensible, and in viewing the sculptures one often asks oneself what in these works of art the artist is actually still responsible for. In the case of sculpture the material is far more decisive. than in painting; and the sculptor leaves it to other hands to fashion this material. How different that sculpture appears when the actist himself has formed it with his hands out of the genuine material, each curvature and cavity formed by the sensitivity of the creator's hand, each sharp blow or lender carving expressing the immediate feelings of the artist. One must keep this in mind when viewing the Female Dancer with Extended Leg which he carved out of oak [fig. 1, p. 45, and cat. no. 66], or the Head of Erna [fig. 5] p. 44, and cat no. 67], or the Friends

What would one have to say concerning paintings for which the painter provided only outlines, specify-

Fig. 1

ing which colors were to be applied within them, but leaving the execution to an assistant? For in painting, this would be analogous to what is today standard practice in substare

In sculpture Kirchner discovered very important laws amove all, the overriding importance of the large, total form and its creation from the proportions of the main idual forms. He sculpts the wood block according to its nature, forming the small form out of the large. He finds a method by which the changed proportions may remain subservient to the overall composition. So the *briends* give the impression of being as big as giants, although they are only 175 centimeters high, because they have larger-than-life heads. Airchner's striving for monumental simplicity induces him to press the human body into ever simpler form. For example, in the Lovers he reduces the female nude to a pointed oval shape and thereby strongly and intensely expresses the soft sensuality of the female body

He finds new solutions for the equilibrium of moving bodies. Firefuer's Rearing Horseman maintains his equilibrium because the horse's legs have been made stronger. In a much more primitive manner, the Baroque sculptor balanced the equestrian statue of Augustus the Strong in Dresden-Neustadt by making the tail larger.

In my essay on kirchner's graphic art which appeared in Genus, I attempted to demonstrate, using the Melancholy Homan as an example, that kirchner has found a novel way to solve the problem of rendering the expression of the soul in sculpture. There, in order to create this expression, he shaped the eye into a speaking hieroglyph. In Homan and Gurl [fig. 6, p. 46], illustrated here, kirchner put the expression of maternal concern into the shaping of the month. All these things have been rendered in a purely sculptural

manner, No matter what kirchner (reates, he will never become unsculptural,

With complete freedom and nonobjectivity, it is employed to heighten and accentuate the sculptural idea. There are figures from earlier times, such as the Crouching Homan, in which coloring creates form directly There are heads on which the eyes and mouth have been painted in order not to interrupt the larger form. Often this results in very special effects. The richness of color of Viedieval sculptures seems about to rise again, except that the modern period applies color very differently than did the old masters.

kirchner's sculpture works mainly with simple basic shapes: cylinder, cone, egg shape, and sphere. Gube and oblong occur more indirectly as forms of composition. These simple forms do not originate from mathematical speculation, but rather from a drive toward monumentality. Airchner desires and forms men and beings, not soulless artistic shapes. This alone distinguishes his works from the rest of modern sculpture which, with a few exceptions, is oriented more or less toward arts and crafts.

who is gifted enough to create new forms and a new style. But his works also have a spiritual message. That is their specifically German quality. They mean something, one may think of something when viewing them, yet they are not literary. A work such as Friends would be wonderful in a modern meeting room of modern men, because of its external shape as well as its spiritual meaning. The material that Kirchner most prefers is wood. He also likes to work in stone, and a few figures from his hand are cast as well. The works reproduced in this article constitute a selection from his entire sculptural ocuvre between 1900 and 1924—25.

MAX OSBORN:

EXCERPT FROM MAX PECHSTELN (1922)

May Osborn (1890–1946) was the editor of the *Inssische Zeitung*, one of the oldest and most widely circulated Berlin newspapers. In addition to being an influential journalist and sensitive observer, he was one of the best-known theater and art critics of his day. His 1922 monograph *Vax Pechstein* – originally published by Propylaen Verlag and excerpted here—was the first comprehensive work on the famous Brucke artist. Other works by Osborn include *Der Holzschnell (The Boodeut)*, published in Bieleteld in 1905, and his memous, *Der bunte Spiegel Ertunet ungen aus dem Kunst-, Kultur- und Geistesleben der Jahre 1890 bis 1933 (The Colored Micror: Memours of the Artistic, Gultural, and Intellectual Life of the Years 1890 to 1933)*, which were published in New York in 1905 and contain important observations on the Expressionist period. The images reproduced here as figures were included in the original text. For additional information on Max Pechstein, see this catalogue, pp. 168–69. – P.V.G.

The strong sense of form which led the painter Pechstem to the graphic arts also initiated his experiments with sculpture, impressionism had rarely sent its disciples to the neighboring country, let the movement of those who aspired to a decorative-monunental style of painting – that movement which had once accompanied the triumphal procession of the pleinair painters – was characterized by its development of a secret love of sculpture. The German Romans heeded this call until the time of klinger. Expression ism, separated from them by oceans but nevertheless connected by the secret channels of a subternment stream – Marées² – in accord with its nature had to feel itself drawn back to sculpture.

Looking at Pechstem's paintings, at Pechstem's head and body, one would think that he would have worked even more as a sculptor on the side. But time and again it becomes obvious that by nature his sensual world view is so specifically focused with such intensity on the enjoyment of color that he could never be litted too far away by the abstraction of pure form At any rate, his delight in craft at times moved him to also be active in the latter arena.

Here, too, one can trace a logical and clear stylistic development running parallel to that of his pointing. In 1000, Pechstein carved several sculptures that did not deny their origin in the final phase of Impressionism Rodm's art seems to have acted as godfather Pechstein created a male bust that he bunself cast, using a plaster model. He utilized the bit of discarded paint tubes. The bust is completely oriented toward capturing the momentary impression, toward movement. Just as Rodin had before, Pechstein made an at tempt to capture the liveliness of natural appearances. to grasp the elements of a motion, the transition of a motion, detached as autonomous parts from the picture of reality. This manner is represented even more pronouncedly in a bronze, the subject of which is a mother breast-feeding her child. The movement is tremendously bold. The mother's body is bent forward beyond all natural posture, coiled, almost distorted Obviously, Pechstein's intention is not simply to model. the two figures, but rather the mystery of motherly

murtinging. He wanted to express the essence of motherhood. The exaggeration was intended to serve this purpose. But within those parameters his presentation. is completely in the manner of Rodin or of the younger. Belgians who followed the Erench master. As in the tinbust, muscles and tendons, particularities of bone structure and skin, continue to speak. Later on such works can no longer be found. For in Pechstem's later sculptures, even when he allows his imagination to roam freely he now seeks to concentrate the message. of form; he is attempting a definite structure of authoritative planes, which are defined by clear, unambiguous contours. Once in a while he found a piece of marl on the North Sea island of Helgoland, and was unable to resist the temptation to carve a few small figures with his knife out of the soft and artistic material - mermaids [figs. 4 and 5, p. 49], small squatting figures, haif-animal, half human, as if a wave had washed ashore a few petrified creatures from the bottom of the sea. They are odd sisters of the round, nude women who crouch on the beach in Pechstein's coastal paintings. They are miniature versions of the massive women with whom we are familiar, whose animalistic physicality is here turned, in a funny and secretive way, into that of fairy-tale creatures

But the true joy of sculpting took full possession of Pechstein only when he discovered the material that perfectly corresponded to his character; wood. A carved bust of 1915 reveals the complete transformation. The material was problematic; it offered stronger resistance; therefore the depiction of nature was reduced to what constitutes its critical surface com-

plexes. The stricter style of Pechstein the painter is unirrored here. And just as the South Sea journey brings this style to fruition in Pechstein's painting. here too, Pechstem's sculptural activity culminates in the decorative simpulication of his carved figures of 1919. This simplification constitutes a stripping away, consciously and fundamentally, of everything that might be considered unitative of nature. The Nun [fig. 8, p. 50], the Moon [fig. 9, p. 50], the Quarter Moon [fig. 6, p. 49] - these are carvings which to a large extent refleet the primitive artistry with which Pechstein had become familiar on the Palan Islands; small (do.s. freed from the tree trank, whose shapes shunner through the enchantment; dreamlike appearances, the head and limbs of which are beginning to move in what seems to be the twilight of half-consciousness. They have a motionless, strictly bound posture, with extreme concentration on the structure of form, Just as in Pechstein's woodcuts, color is often added to these woodcarvings as an onlivening element. The figares are painted in dark, full, and expressive colors, the strong contrasts of which adapt to the crude spatial cuts of the knule. The tones correspond to the material and become one with it. Thus these fruits of leisure. hours filled with rich imagination have become impressive and enigmatic symbols of Peclistein's idea. of art.

MAX SAUERLANDT:

"WOOD SCULPTURES BY KIRCHNER, HECKEL, AND SCHMIDT-ROTTLUFF IN THE MUSEUM FÜR KUNST UND GEWERBE, HAMBURG" (1930–31)

In 1919, [Friedrich August] Max Sauerlandt (1880–1954) was appointed director of the Museum for Kunst und Gewerbe, Hamburg. In this position, he became the first German museum director to acquire and exhibit Brucke sculpture systematically in a public museum. As early as 1926, he began planning an exhibition of brucke sculpture and crafts, and the 1929 reinstallation of the modern collection enabled him to exhibit Brücke works throughout the Museum for Kunst and Gewerbe. Sauerlandt also served as the acting director of the Landeskunstschule Hamburg starting in 1930 and was a professor at the Universität Hamburg, where in 1933 he taught a course – remarkable in its time – entitled "German Art of the Last Thirty hears"

Several of Satisfland's many publications were devoted to the introduction and defense of the German Expressionists. In 1952, aware of the political threat posed by the Right, he wrote to a Danish friend describing the Expressionists as "the pillars of the bridge", which is built across the abyss threatening us." Sauerlandt was frequently criticized for his acquisition of Expressionist art and was removed from his university and museum positions by the Nazis shortly before his death in 1954. The essay translated here was originally published as "Holzbiddwerke von Kirchner, Heckel and Schmidt Rottligh im Hamburgischen Museum für Kunst und Gewerbe", in the journal Museum der Gegenwart. Zeitschrift der Deutschen Museen für Neuere Kunst, no. 1, 1930–31. The images reproduced here as figures 1 and 3 – 7 were included in the original essay. Perimission to translate this essay is courte sy of the Museum für Kunst und Gewerbe, Hamburg, and Fran Charlotte Specht, Hamburg, – P.W.G.

These fictions, these hieroglyphs that every art needs, are understood so poorly by those who want all truths to be natural, and who thereby tear art out of its sphere. — Goethe, Plato as a Companion of Uhristian Revelation, 1826

In 1910, the decisive year for the contemporary period of German art, Max Liebermann, in lus last term as president of the Berlin Secession, declared the following before Manet's Execution of the Emperor Maximilian: "In the face of this painting we find the confirmation of the truth that yesterday's revolutionaries have become today's classics."

Since then the wheel has continued to turn, and the revolutionaries of 1910, who had been rejected by that exhibition, have become the recognized leaders of 1930. We are hidebted to them for the most beautiful gift that a work of art can provide a powerful heightening and expanding of our perspective on life, a complete renewal of our world view.

Perhaps it is possible to find within a period's final style, with all its apparent contradictions, the beginnings of the new – transitional forms that are, as they say, atent. Let the common opinion of current historians – who would like to believe in an even flow of development and who hold that a violent break with tradition is impossible – is wrong. Even in the stream of artistic events there are cataracts – revolutions that bring forth an entirely new picture.

We have witnessed such a spiritual revolution. It took place during the fertile five years prior to the year 1910. With infallible instinctual certainty the artists who at that time created the foundations of a new form

1 The jury of the Berlin Secession rejected twenty-seven

Expressionist artists who thereupon founded their own exist bition group – the Neue Sezession Among the rejected were the members of the Brucke (Kirchner Pechstein, Schmidt Rittluff, and Vineller), as well as Moriz Metzer, Caesar Klein, Walter Helbig, Georg Tappert, Jakob Steinhardt, and others. The Neue Sezession exhibited fifty-six paintings at the Galerie M. Macht in Berlin in 1940. Ed

sensed that the ring of the developmental chain was closing. In their own time they sensed what Pinbpp Oito Runge² felt a bondred years earlier when he wrote; "loday once again something is coming to an end" Now what was coming to an end was the period of Impressionism, the last sigh of reitef of a long life of art, which in its best representatives had certainly shown greatness.

It was a rich time for painting, which was then experiencing its first blossoming. Never before had so many great names and works appeared – and yet it was only the beginning

The works of art created during that period have made us aware of needs that we never experienced before, and in this awareness lies the path of our rejuvenation: a need for form and color that are neither a rendition of reality nor an intensification of the forms and colors of reality but on the contrary, something entirely different that must autonomously stand in opposition to the appearance of reality, for the work of art bears within itself the law of its own form

Will the art of our times have far-reaching effect? One cannot measure with a yardstick effects upon the soul. Not breadth, but intensity of effect is decisive. And this intensity of the immediate effect is there, it guar antees a breadth of effect as well. Spiritual change has always come about in this way, from the few to the many – but only if the few are conscious of their obligation. The generation growing up today is already changed deep inside; it has, consciously or unconsciously taken on the character of the new form. And this art has already proven to have the strength that brings torth life.

We can without doubt say this in regard to painting. But it does not yet apply, at least not yet in the same degree, to the plastic form of sculpture. *Nostra culpa*

Who, after all, knows anything about the fact that sculpture, too, as is only natural, has experienced the Lipid thill hib, the lipid lipi

In the background of this por trait of museum director Max Sauer and its Kirchner's Vade with a Bath-lowel Bathing Homan (1kt mit Tich Badende) 1909-10, [1905] Fig. 1-p. 52 same decisive new beginning during the same decisive years? If one runs through the old exhibition cata agues of the Berlin Secession from the first decade of our century, it becomes frighteningly clear to what extent the feeling for the true artistic value of plastic form had died off in Germany at that time. That the boundary between nature and art had been obscured by a "monstrous skillfulness" holds true even more for the sculpture of that time than for its painting.

And yet these years may be seen to have been of equally fundamental importance for sculpture when we look at the first plastic works of the same artists who initiated the new era of painting. But these first sculptures remained at that time, and even today, imseen in the studios. Or they remained accessible only to the few, in the rooms of individual confidants.

This achievement cannot be recognized completely, and will remain without effect, if these works do not also find their long-overdue place in public collections, as is now the case in Hamburg

The Nude with a Bath Towel / Bathing Homan [fig. 1, p. 52] drying herself off, sculpted by Kirchner in 1905, is the first and perfect example of the meaning of the "chythm of the closed form" and "closed composition" in plastic art. In one uniform motion of articulated limbs, the human form, its height towering diagonally to the left, has been projected into the full alder block it has been cut out of the full block, carved out in the powerful and lively rhythm of the constructed masses of head, trunk, legs, and feet with heavy blocks underneath. The rhythm of color is equally grand, the strong and uniform yellow of the body being structured by the black, whereas the white of the bath towel height cuts the intensity of the black and yellow, binding the mass of the block together.

The pure, full colors of the painted wood nowhere cover up the structure of the wood or the traces of the work. Every blow of the axe and every cut of the knife remain directly, sensually perceptible, touchable to the eye. This is a genuine, unconcealed art of wood sculpture, quite different from the colorful wooden sculptures of the Middle Ages in which the back ground of chalk and layers of paint and gilding make the wooden core completely disappear in contrast, the particular artistic charm of this sculpture has in the extremely fresh and fively treatment of the wood surface.

This is a figure that has been created by virtue of a truly admirable free spirit and inner independence, and its early year of creation initiates an era. Its spirit may be seen in all other wooden figures of this artistic circle, up to the present day: in the works of Erich Heckel, who uses color more sparingly most of the time; and in those of Schmidt Rottligh, whose plastic forms themselves are so sharply and deeply structured so markedly chiseled, that color is no longer required for the intensification of the rhythm of forms. On the contrary, color serves to hind the forms together into one unit

This may be seen, for example, in the two birch Heads in the Hamburg Museum. They originated dur-

ing the War, in the year 1917. One of them is uniformly painted a dark red [Red Head, fig. 7, p. 54]; the other one, Young Lithuanian Human (fig. 6, p. 54], a brilliant green. The colors hold their own beautifully next to the refracted, dense glass colors of Schmidt Rottliff's first mosaic from the year 1924. The mosaic and sculp tures are both in Hamburg, they are exhibited in the same staircase setting, which was remodeled in 1930.

The forms of drawing, painting, and sculpture grow out of one and the same root. Kirchner still has his drawings of the same madel who served as the basis for the yellow Nude with a Both Towel / Bathing Homan.

The idea for the Lovers [fig. 5, p. 53] of 1923 goes back even further. The woodcut Before the People (Schieffer, 65, ill. [Dube 1, 45]) originated in 1900, as the fifth page of the cycle Man and Homan. [In the woodcut[in front of a light background the couple, embracing and walking on the crest of a hill, to the right, in the foreground, a sardonically laughing and finger pointing crowd; on the left block margin, white ornamental lines repeat in abstract form the contents of the picture. Fully twenty four years later, the finalpainted version of this motif followed, in the great pointing of Airchner's mature style [fig. 4, p. 55]. One year previously, he had carved the Lavers from a huge block of Swiss stone pine, the "wonderful high mountain tree," as he writes. In the entire alpine area, all the way down to Salzburg, its resinous wood is used for carving, particularly for the big masks.4

The composition of the painting, with its large are as of color, has been anticipated by the wooden sculpture with its contrasting orange-colored other of the female and the redd sh brown other of the male body, as in the painting of classical antiquity where the sexes are differentiated through a stark contrast in color. Again, as in the case of the Nude with a Bath Towel / Bathing Homan, in this instance of a couple speaking in subdued gestures, color serves not only to sexually differentiate but also to interpret the clear structure of the masses and to give a lively rhythm to the plastic-spatial form

Schmidt-Rottluff's archetypal artistic method and Hecke,'s tender form contrast with Kirchnee's ingenious mode, in spite of the identical pictorial material and the basically Identical technique. This is exemplified for Schmidt-Rottluff by the aforementioned *Heads* of 1917, in which grim seriousness and heated passion are restrained, for eleckel, by a large *Standing Homan* (fig. 5, p. 54] of 1912, a Mary under the Cross, or even better, a Madonna of the Annunciation. It is a sculpture of maple wood which shyly covers its nakedness, so to speak, in itself.

4 The "ing masks" referred to here are an important southern German and Austrian form of folk art. These masks are worn at Fasching (the season prior to Lent) in parades and processions—Ed.

Acquired in 1950 by Max Sauerland, for the Museum for Norst and Gewerbe, Hamburg this was one of Heckel's largest Ogures. Confiscated by the Nazis in 1937, it was illustrated in the Entactete Kanst catalogue (p. 19), where it was described as a work "which truly bears a greater I keness to goriflas than to haman beings." Also exhibated at the Frete Sezession exhibition, Bet lin, summer, 1920 (see fig. 1, p. 112)

one, the specific form is unequivocally defined in it self, as is also the case in the painting styles of the same artists, who thus once more prove their inner freedom and their independence,

Certainly, this is a kind of form we are unaccustomed to. Even today, all of this has a strange effect on us. But it is a kind of form that is speaking to us clearly, in the primeval sounds of plastic creativity and spiritual expression. These heavy and serious sculptures of our time emphatically declare that art is no child's play, that works of art are not being created for entertainment, and that the often misused word beautiful has lost all meaning in relation to the work of art, because its creation has a different starting point and a different goal than the starting point and goal of so-called classical art. Certainly, it is an art that grew out of our time, not in spite of it or against it. It reveals the deep spiritual problems of our present day. But by presenting them, it already contains their solution.

Such a form of art could be found only on individual paths, and he who before these works of art—he it in a laudatory or a shoulder-shrugging manner—speaks of "Negro art," only proves that he does not possess a sense for the decisive differences of artistically related phenomena, which it is all-important to see and to perceive, in order to become a work of art, every new perception demands its own techne, so as to unite the content and craft-method of the sculpture. If a new interpretation of the world were expressed in the usual form, by the usual means, it would have a hierary originality at best. The new work of art can only find its inception in the fusion of new perception with new form, as we find in these modern sculptures.

0.00

Alexander Archipenko is regarded as one of the most experimental sculptors of the first third of our century. His numerous innovations in form, technique, and materials exerted an extraordinary influence on the course of

development of modern sculpture.

In 1902, he entered the art school in Niev, but, after a period spent studying the fundamentals of painting and sculpture, he developed a definite aversion to academic instruction. He moved to Paris in 1908 and began studying Egyptian, Assyrian, Archaic Greek, and early Gothic works on his own. Archaec Greek, and early Gothic works on his own. Archaec works or marked of this time: "My real school was the Louvre and Lattended it daily."

While the earliest bronze sculptures that Archipenko created in Paris were influenced by the decorative lines of Jugendstil, or Art Nouveau (e.g., Adam and Eve, 1908), the works of the following year reveal a turn toward the primitive. His Suzanne of 1909 (stone, Norton Simon Museum, Pasadena, California), a voluminous torso with heavy lups, large hands, and reduced forms, would be minnaginable without the precedent of the blocklike sculptures of Andre Derain, Derain's Crouching Figure (1907, stone, Museum des 20, Jahrhunderts, Vienna) is immediately called to mind

In 1910, Archipenko joined the Cubists and exhibited his works in the Salon des Indépendants. He began to engage in the geometric subdividing of the human body into the fragmented forms typical of Cubism. The figure became merely a vehicle to be transformed into a chythmic interplay of volume and concave form, of light and shadow.

In this connection, the previously unpublished sculpture Anceling Couple in Embrace (cat. no. 2) is exemplary, it combines the pronounced blocklike character of the sculptures of 1909-10 with a stylized interfacing of figures engaged in coordinated processes of motion. This latter motif is also apparent in the two sculptures entitled The Kiss (1910 and 1911, plaster [Gips], 1911 version destroyed), in which the bond of the figures to the block is further strengthened. by a strong base. The special weight and expressive deformity assumed by the forms in the kneeling Couple are not solely due to the choice of wood as a medium. In fact, as opposed to the sculptures of the Brucke artists, the effect of the wood as material basbeen considerably reduced. Archipenko was conor ned with the extreme abstraction of the physical form and its transformation into a rhythmically animated configuration. In this particular sculpture, the Jiffering degrees of abstraction evidenced in the various forms reflect a stage of the artist's development the fusion of objective form and autonomous structure. feels slightly forced.

The bronze Draped Homan (cat no. 1) is even more dominated by contrasting forms, which in this case comprise a traditional motif of figural sculpture — bit dy and garment. The contrast of the softly rounded, stylized body and the hard, angular folds of the material is diminished by abstraction — notably the culting off of the left arm. Apart from these characteristics, the figure owes its Expressionist effect to the tension of its proportions and to the dynamic equilibrium of the body. As in the *kneeling Couple*, the shape of the base emphasizes the three-dimensionality of the sculpture

In 1912, Archipenko sent his work to the Folkwang Museum in Hagen, where his first German one-man exhibition was held. In Germany, sculptors reacted slowly to Archipenko's innovations, due in part to the adverse conditions which existed during the Earst World War In their ready mades, the Dadaists were influenced by his novel creative techniques and combinations of materials, while the late Expressionists of the Berlin Novembergruppe (Belling, Emy Roeder, Garbe, and Herzog) took up his less provocative sculp tural forms, concentrating on the Cubist reduction of form and on the activation of voids.

During the early teens, developments in Archipenko's work were various and complex. He errived at an equal treatment of void and mass, as seen in his Striding Man (1912, brouze) and Homan Combing Her Hair (c. 1914, brouze). This dissolving of form was followed by constructions related to Synthetic Cubism. The Haiking Homan (1912, brouze) consists of a combination of heterogeneous parts which no longer initiate organic forms but merely invite objective associations through struct trail context.

Apart from these proneering works, a second group developed, which at first glance appears more conventional. It replaced the montage principle with the dynamic arabesque of motion. Like the first group, however, volume was reduced and composition lightened. In Red Dance (fig. 2, p. 58), the figure reaches out into or embraces space, animating the spatial environment. The figure's communication of specific sculptural values is more important than its objective motif of motion. The free proportioning of the body emphasizes the chythm of movement, and the parallel and symmetrical relations of the individual parts of the body reveal the contrast of mass and space. Blue Dancer (1915, bronze) is a comparatively more balanced version of this dance motif.

A third group of works, even more important for the development of modern sculpture, also originated around 1912. The "sculpto-paintings" display rhythmic contrasts through new combinations of materials – wood, glass, wire, found objects – as well as novel techniques – for example the combination of collage and painting (e.g., Medrano I, 1912, figural construction of wood, glass, metal, metal wire; probably destroyed during World War I). In his selection of new materials on the basis of their aggressive modernity. Archipenko fulfilled Boccioni's demand as stated in

1 Oxoted in Wiesi 19,7

his Manifesto teemeo della scultura futurista.⁴
Archipenko's technique of assemblage furthered the development of the collage into three dimensions

Arch.penko's Carrousel Pierrot (1915, painted plaster [Gips], The Solomon R. Guggenbeim Museum. New York) synthesized some of his unnovations; the robotl ke sculpture demonstrates mechanization of the figure by the introduction of abstract geometric elements. The thin, flat planes and the mechanical formal connections of Archipenko's 1913 bronze head constructions and his sculpture Boxers (c. 1915, branze) (the latter was described by art historian Carola Giedion-Welcker as a "plastic play of fugues") correspond to the principles of Synthetic Cubism found in Duchamp-Villon's Horse (1914, bronze) and Jacob Epstein's Rock Drill (1915–15, bronze).

By the beginning of the twenties, critical awareness of Archipenko's lustorical ments had lessened, at part due to the altered orientation toward Neue Sachlichkert. The ceitic Carl Einstein attempted a pole inical devaluation of Archipenko as an imitator of Picasso's Cubist painting. At times it appeared as if Archipcuko. was himself in comphance with such polemics, for di ring the twenties he was largely content with creat ing variations on his previous inventions, although some new figure types were added. An exhibition four of Europe in 1919-21 made Archipenko's work widely. known, and in 1921 be had his first American one man exhibition at The Aluseum of Modern Art in New York. In 1921—25, Archipenko hved in Berlin, where he met his wife, the sculptor Geia Forster (née Angelica Brimo Schmitz), who was a member of the Sezession. Gruppe 1919, (See pp. 50-55 of this catalogue for a contemporary account of Ferster's work.) During this period, Archipenko's reputation in Germany was at its peak, but the artist's one man exhibition at the Kittisthalle Manufie in in 1922 was to be his last German exhibition for many years

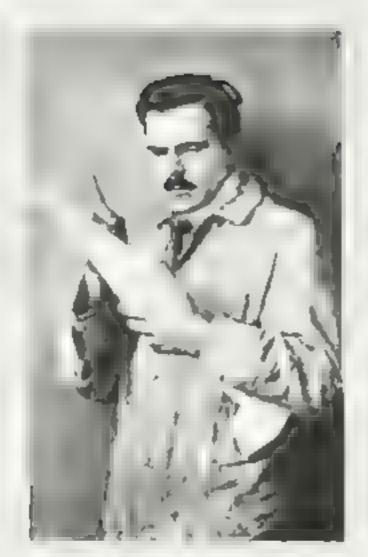

When Archipenko moved to the United States in 1925, his work was already well known from his participation in the 1915. Irmory Show Upon his arrival in New York, he founded an art school and in 1924 invented the "Archipentura" – a variable image system or "movable painting" which presented that medium in temporal as well as spatial terms.

Statuted European connections are reflected in the artist's portraits of the twenties and thirties. From the very beginning of his career as a scriptor, Archipenko had created portraits, his stylistic range extending from naturalism to the extreme *Head Construction with Crossed Planes* (1915, bronze). Archipenko's por trait of Wilhelm Furtwängler (cat. no. 5) was based on its impressions of the conductor's performance at a concert in New York in 1927. The vivid modeling of the scripture's surface, the impressive play of light and

2 Umberto Baction. Manifesto tecuto della scultura futarista, published as a leaflet in Milan by Poesia, April 11, 1912; repri ited as Technical Manifesto of Futurist Sculpture 1912 trans. Robert Brain, in Futurist Manifestos, ed. Umbro Apolonio, London Thames & Hadson 1975, pp. 51–65 shadow, and the extension of gestures into space create a baroque realism that recalls the work of Rodin, whom Archipenko had so strongly opposed in his early work

In 1957, Archipenko's works were removed from German museums as "degenerate" But his productivity in America was unabated. In 1928, he had become an American citizen, American museums were cager to acquire his work, and he was also in demand as a teacher, hivitations included one from Laszló Moholy-Nagy to teach at the New Bauhans in Chicago Archipenko created an extensive neutre in America and continued to develop the themes of his cather work. An Archipenko retrospective was organized by the UCLA Art Galleries in 1967. — J. H. v. W

Frost Bar och

Born 1870 Wede

died 1938 Rosinck

CHARLE

Frost Barlach was born in the northwest of Germany, the eldest son of a playsician who died when he was only fourteen. From 1888 to 1891, he studied at the Hamburg Kunstgewerbeschule. He continned has education at the

Dresden Kunstakademic, studying under the sculptor Robert Diez from 1891 to 1895, and additionally spent two short periods at the Academie Julian in Paris

I pon finishing his studies Barlach, although technically profesent and certainly aware of the semiclassical style preferred at the time, had not experienced any significant actistic development. He was hired by his friend Karl Gaber to assist in the execution of architectural sculptures for the city halfs of Hamburg and Altona, but somehow fell dissatisfied. He stayed in Berlin for two years and then returned in frustration to Wedel, his hometown, where he began to make small ceramic sculptures. In 1904, he taught for a year at the Eachschule für Keramik in Hohr but returned to Berlin in 1905.

The year 1906, however, witnessed two important events, the birth of Bariach's illegitimate son Nikolans, whom he adopted after a legal battle, and Bariach's emergence as a scriptor, bor two months during this year, he traveled – to Warsow, kiev, and then to kharkov to visit his brother. On this trip, he suddenly began to see the world and the human form in a new way No single event effected this change, it was rather as if a vague but long-standing idea had finally made its importance fett. Bar ach now fully realized that there was a way to fuse the depiction of man's inner emotions, hopes, dreams, disapportance. The simplicity of the people Bariach encountered in the context of the vast Russian landscape proved to be a reveiation.

In his Russian diaries, Bar ach described this new vision, and, shortly after his return to Berlin, be translated it into small sculptures. The garment of the Bund Beggar (cat. no. 4) already shows his characteristic avoidance of the particular and accidental. The Russian Beggarwoman with Bowl (cat. no. 5) was the art ist's second attempt to represent his Bussian experience. Paul Cassiver, the famous gallery owner, offered Bariach a contract with a yearly sidary in 1907, and the artist, now thirty-seven, began to work intensely, it most as if to make up for lost time (see Russian Beggarwoman II (cat. no. 7)).

Barlach's first wooden sculpture was the bearded Russian Shepherd (1907; Schult, 77). In a dairy entry of January 1908, he noted that his lask of experience in working with wood had resulted in his cutting limited while creating this sculpture. Despite this mishap.

I Bartach 1958 pp. 259ft

2 In a letter to Arthur Eloessek October 1 1952; see Lenst Barbach, Lehen und Herk in somen Briefen, ed. Fr. 161 (10) ss. Ahmach: R. Piper & Co. Verlag, 1952, pp. 171 Barlach came to prefer wood as a sculptural material and maintained this preference throughout his life. His second work in this medium, the heavy Scated Homan of 1968 (cat. no. 8), resembles an archaic feetility figure. A human mountain with large hands resting on her spread knees, the Haman's generalized forms emphasize her essential humanity. In the same year, Barlach made his first large wood sculpture. Shepherd in the Storm (kunstnalle Bremen, Schult, 93).

In 1909 Barlach won the Villa Romana Prize which provided a supend for a ten-month stay in Florence, but Balian art failed to influence him. While in Ha y, I e. continued to work on pieces which he had brought with him from Germany, as well as spending time with the poet Theodor Daubier and the writer Moeller van den Bruck. Soon after returning to Germany, Ba Jach. moved to the small northern town of Gustrow, where he remained for the rest of his life. He not only continued working untiringly in sculpture and graphics, but also began a serious writing career. In 1912, his first drama, Der tote Tag (The Dead Day), illustrated with twenty-seven of his own lithographs, was published by Paul Cassifer His work could now be divided it to three parallel pursuits: sculpture, graphic art, and winning.

The First World War occasioned a turee-mon in he terruption of Bartach's work, duting which he served in a nearby camp. Along with other German Expresstonists, including birchner and Beckmann, Barlach initially welcomed the War as a vehicle for social change. Within two years, however, the artist, and most of the Expressionists with hun, had come to recagainze its inhumanity. The Avenger (cat nos 9 and 10). with its Cubist and Enturist elements, is one of are most dramatic and powerful of Barlach's works. It belongs to that group of sculptures designated Berserker (Schust, 105 and 118) by the artist. In 1914, Barlach could comment enthusiastically: "To me this Berserker is the crystallized essence of War, the assault of each and every obstacle rendered credible."5 The same figure used in the deenger appears in the lithograph The Holy Har (eat, no. 11). Another wartune work, The Eestatic One. The Desperate One (Cat. 1.0) 12), was modeled after a Gustrow bricklayer. It is one of Barlach's most dramatic figures and one in which gesture is all important. Wearing a long, heavy overcoat, the figure takes a great stride forward, his face is raised, his mouth is agape, his elhows are sharply angled upward with his hands locked behind his head. The torso is one solid block and only a single large fold of the coat - reaching from the right hip to the left call. - defines the figure

The first large exhibition of Barlach's work was held in 1917 in Paul Cassirer's gallery in Berlin. About two dozen wood sculptures, as well as numerous drawings, lithographs, and plaster models were shown. As important as the exhibition was, it did not prove to be a commercial specess. Nevertheless, the critics became

1 1 71 11

5 Bi rtach, 1959, p. 45

aware of the "new" sculptor, Cassirer was pleased and later Barlach gratefully wrote in his autobiography, "He [Cassirer] took my lambs out to pasture, he cared for the freezing first born."

Barlach's second play, Devarme Letter (The Poor Cousins, was published in 1918. In the same year, he created Man in the Stocks in wood (cf. cat. no. 14), a sculpture which communicates man's "imprison ment" in this world, as well as indicating the perception of a power that can release him. The position of the figure's head and hands in this scupture is closely related to that depicted in the later lithograph k | zprofundis (1924). Barlach also began to make his first woodents in 1918, these established a new standard of expressiveness and strength in his work. The woodcut The Transformations of God. The First Day (ca) no. 17) was based on drawings made in 1919-20 and was cut in wood in 1920-21. It is the first print from the portfolio The Transformations of God and inspired the sculpture God the Father Hovering (cat. no. 18)

The year 1919 saw Barrach made a member of the Prenssische Akademie der kunste in Berlin and the creation of his sculpiure Hooded Beggarwoman Charac (cat. no. 15). This work is a three-dimensional enlargement of the woman seen in the center of the rebef Death and Lafe (cat. no. 15); this same figure reappears on the lower left of the Magdeburg Har Memortal (1929; see below)

Throughout the twenties, Barlach's reputation grew. In 1924, he received the prestigious kleist-Preis (Kleist Prize) for his aramatic and written works, and in 1925, he was made an horiorary member of the Minichner Akademie der Künste. In rebruary 1926, Cassirer's gallery presented thirty-seven wood scuiptures in an exhibition which established Barlach's faine; he was then fifty-six years old. Cassirer himself, however, was imable to share in this "victory," having committed sincide shortly before.

Official commissions followed this success, including some for war memorials. The Har Memorial for the Güstrote Cathedral (fig. 2, p. 68) was a life-size human figure suspended horizontally from two strong. chains. The raised head and the garment, which becomes wider toward the naked feet, indicate less a flying than a hovering motion. Aside from the Singing. Man of 1928 (Schult, 543), this memorial is probably Barlach's best-known work. The artist made a present of the work to the Gustrow Dom (cathedral), the congregation paid only for the bronze. The sculpture was dismantled in 1937 by the Nazis and melted down for scrap metal. A second bronze was made from the original form in 1942, and it survived the War. It is now installed in the Antoniterkirche in Cologne. An additional brot ze was east from this second one and has been installed in the Gustrow Dem. Barlach stated that he had the face of Kathe Kollwitz in mind when he sculpted the head.

Other sculptural commissions executed by Barlach include those for the Universitätskirche in Kiel (1928,

cut in three parts 1957 - 58, reassembled and currently in front of the Nikolai-Kirche, Kief), for the Mag deburg Dom (1929; in 1954 moved into the basement of the Nationalgaleme, Berlin, due to the profests of right wing members of the congressation), and for Hamburg (the first proposal was rejected, a second commission was completed in 1952, it was removed in 1937). Some commissions were rejected upon submission, the city council of Mak hin and right-wing groups protested Barlach's designs, and the same fate. beleft his Picta intended as a war mensitial for Straighted. The nonheron forms with which Barlack conveyed the sufferings of widows, orphans, and of the soldiers themselves, as well as his expression of resagnation in the face of man's inhiminably to man, were clearly unacceptable to the increasingly nationalistic right wing

In 1930, Barlach had been approached by Cath Georg Heise, director of the Museum for Kunst and Kulturgeschichte, Laibeck, to sculpt at group of sixteen. figures which were to fill the niches of the Gothic brick west facade of St. Katharmenkirche in Lubeck, The plan allowed for the creation of two versions of each figure; one version was to be sold to cover expenses for each Linbeck figure. Between 1950 and 1952 Barlach made three figures, which he referred to as: Community of Saints: The Beggar (cat. no. 22); The Singer (1951; Schult, 589); and The Homan in the Wind-(1952, Schult, 411). But the sale of the duplicate versions was disappointing, protests in Lubeck were loud, and the project was discontinued. In 1952, Barlach suggested that Gerhard Marcks be asked to complete. the group. Only after the Second World War did-Marcks finish five figures, the eyele having been reduced to eight.

From among Barlach's sculptures of these years, The Fluteplayer (1956) is included in the exhibition in three versions: a plaster (cat. no. 24), a bronze (cat. no. 25), and a teakwood sculpture (cat. no. 26). These works were executed nearly styleen years after the preparatory drawing of (949 - 20 (cat. no. 16) and indicate Barlach's thematic continuity. They also permit a study of the way he worked in different media. The little shepherd, leaning backward and playing his shawm, is nearly covered by his large cloak. Only his sharply angled legs, his hands, and his face are articulated. Thus enveloped, he appears to be transported by his music

Barlach's works give form to the most fundamental level of human hie and suffering, frequently touching upon hunger and misery, death and grief. No accordental or nervous gesture breaks the closed forms; the heavy got ments prevent detail from disturbing formal unity. The faces, too, avoid specifics, summarizing in stead a state of existence. There are, however, no abstract forms in the works of Ernst Barlach. For this artist, only the human form was capable of corrying meaning for man. If the term *Expressionism* indicates an act which manifests in visible forms the inner life of mankind, then of all Expressionists Barlach must be considered the greatest.

defore the thirties. Barlach had refrained from entering into political discussions. Looking back at the First World War, however, he reproached himself for not speaking out against it. When the Nazis came to power in 1955, the shy and withdrawn Barlach gave a radio address in which he protested against the exput sion of Hesorich Mann and Kathe Kollwitz from the Akademie der Kunste-

Both are degrading, silence and compulsion to sitence. For example, when an artist may not create. art because the realization of his most burning wish. is prohibited everywhere by the ideological catechism of those in authority, this must be regarded as degrading, since it denies validation of his madness. (from the outside) to equal his achievement of selfanderstanding

Although in February of 1955, Barlach was honored with the prestigious Orden Pour le Mérite (Order of Merit), the highest peacetime honor which Germany had to bestow, one month later when the church conncil of Magdeburg began to demand the removal of his war memorial, he became aware of the bitter times , head. Friends still bought or commissioned works, and the collector Hermann F. Reemisspa made it possible for him to complete Frieze of the Listeners (Schult 517 - 51), which was originally begun as the base for a memorial to Beethoven (fig. 1, p. 62).

In 1935, however, the Nazi attack on Barlach's art to came even more obvious. After a successful opening performance of his drama Die echten Sedemunds (The Genuine Sedemunds) in Altona, subsequent performances were probibited. A sculpture, Das Wiederschen (sometimes called the Doubling Thomas, Schult, 507), was removed from view at the museum in Schwetin.

L Barlach, 1959, p. 421.

Barlach's works were taken out of the 1956 exhibation of the Preussische Akademie der Kunste, together with those of Kollwitz and Lehmbruck, and a volume. of Barlach's drawings, ready for distribution to the bookstores, was confiscated By July - August 1957, 381 of Barlach's works had been seized from various museums and removed from public view. In December, he was informed that he would go longer be permitted to exhibit. One year later, Bariach died in a cante in Bostock and was buried on October 28, 1938, in Ratzeburg with Georg Kolbe, Kathe Kollwitz, Gerhard Marcks, Karl Schmidt Bottluff, and Hermann C. Reemtsma in attendance. – PW G.

Beckmann

Max Beckmann

Born 1884 Leipzig

died 1950 New York, U.S.A.

The painter Max Beckmann was already fifty years old when he produced his first sculpture, Man in the Dark (cat. no 27), in 1954. It was the second year of Hitler's rule over Germany. To Beck maon, an avowed liberal

and a passionate individualist, it seemed that deep darkness had fallen on his homeland

The Man in the Dark interacts forcefully with the space surrounding him. His three-dimensionality is such that only the plastic medium could express and contain it. The arms, bent forward, sideways, and upward, define the three dimensions. It has face is averted from the direction of the man's cautious steps, as if he were afraid of bumping into an obstacle. The feet seem enjarged and flattened by the will to cling to tactile, solid ground. The hands are fearful question marks: Where am I going? The folds of the garment. are swept sideways by unseen forces. The psychologic cal paradox of progressing against unknown odds leads to an almost baroque contrapposto. The idea of the hidryidual menaced from all sides demanded to be rendered in the round. It remained doubtful as to whether the forlorn figure – like the artist himself – would find his way out

Beckmann had become accustomed to recognition early in his career, Born in Leipzig in 1884, he entered the Weimar Academy in 1900 and received the coveled. Villa Romana Prize in 1906. His works were acquired by many public and private collections. In 1925, he took over the master class at the Stadelsches Kunstinstitut in Frankfurt. He had anincroits exhibitions. His biting social criticism, his almost magical skill with colors and forms - these were the subjects of eager discussions in contemporary articles and monographs about him. Therefore, he was deeply hurt when, in 1955, the Nazis distinssed hun from his teaching post in Frankfort and forbade an exhibition already assembled in Erfort. From then on, one Terbot. followed another. Many of Beckmann's dealers and collectors emigrated from Germany. Together with all the other Expressionist, abstract, and Surrealist art ists, he was designated as "degenerate." In 1936. the Berlin Nationalgalerie - where formerly he had enjoyed his own exhibition room - threw out the last Beckmann painting. In the cultural life of Germany, he was now a "nonperson".

The need to assert himself may have been the motive behind Beckmann's creation of his massive Self Portrait (cat. no. 29). This 1956 bronze almost bursts with existence – it proclaimed to the fates that May fleckmann was a presence to be reckoned with Beckmann had painted and etched numerous self-portraits; their expressions range from sareasm to philosophical introspection, from sociable amusement to pride. The bronze self-portrait is calm. It shows hardly any bitterness; it is animated with a searching earnest ness. The wide, expressive mouth, turned down at the corners, seems on the verge of procauming son e important truth. The eyes, in contrast, are coolly fixed on distant things, they show the reticeat glance of a habitual observer, not a doer. The piece itself emhodies a vital, weighty force, difficult to subdue

Beckmann's reasons for trying sculpture were probably different in each case. The spiral movement of Man in the Dark would have been less effective on the that surface of a stretched canvas. The Self-Portrait. uses sheer mass as an artistic mo. J. Adam and Ere (cat. no. 28), like the Self Portrait sculpted in 1936, realizes a pixtaposition of large and small. The very immuteness of Eve cross bing on Adam's band demanded delimition in three dimensions. The proportion of this miniature female body would have been much less surprising if it were drawn or painted and could thus possibly suggest illusionary perspective. Cast in brouze, the intention of the artist is clear; he wanted Eve tiny, Adam large, The snake, symbol of hist, has already entwined Adam as he stares into the distance, trying to imagine what the fut ire might hold.

In addition to the three sculptures in this exhibition, Beckmann created five more bronzes. The Dancer and Crouching Homan were made in 1955. On the opening day of the Entartete Kunst exhibition in 1957. Beckmann emigrated to Holland, and len years later. he moved to the United States. In 1950, the last year of the artist's life, when he was working contentedly in America, he executed his three last sculptures: Back Bend, Snake Charmer, and Head of a Man 'These 8. sculptures, in comparison to his 835 oil paintings and more than 500 graphic works, may seem only a sideline of his vast ocuvre. But he took his excursions into the plastic realm seriously, including painted statues in some of his triptychs. The Sclf-Partrait sculpture, for example, appears in the Still Lafe with Bust (fig. 2, p. 75), providing a dark, looming presence between the pale green and pink flowers and cuctains. His deep feeling for the sculptor's particularly sensuous activity was expressed in a fascinating oil painting. The Sculptor's Dream, of 1947 (Göpel, 737). The sculptor hes asleep on his bed; from behind him, two gaganite. hands grip his shoulder and stomach, squeezing and molding his living body

Beckmann knew all about the problems of being a sculptor. Let we cannot consider him a born one. When Michelangelo, on orders from the Pope, painted the fantastically varied figures in the Sistme Chapel, he could not invent significant landscapes to set off the homan bodies. When they use brish and ink or oil paint, most carvers and shapers of stone or clay ne gleet trees. Howers, houses, clouds, and other at mospheric phenomena. Beckmann, on the other hand, was an inspired painter of landscapes and on occasion brought this quality of inspiration to the medium of sculpture as well. S.1

Belling

Rodalf Belling

Born 1886 Berlin,

died 1972 Krailling, near Manich

Rudolf Belling's posthumous fame in Germany as a pioneer of abstract sculpture is based primarity on two works, Triad (fig. 2, p. 77) and the robothke head sculpture 23 (1925, bronze). These sculptures originated during the

period following World War I, when Belling - one of the cofounders of the Novembergruppe and the Arbeitsrat für Kunst - adapted the ideas of Bussiau revolutionary art and attempted a synthesis of previous modernist inventions. A symbolic representation of three art forms - painting, sculpture, and architecture - Traad combines tendencies of Cubism. Futurism, and Expressionism. Its contrapoutal com-Emation of mass and space, which is in some respects indebted to the work of Archipenko, anticipated Belling's later concept of space. The latter was clearly formulated in the artist's theoretical work and realized on a large scale in his "Cubist" design for the ceiling of the Scala Casino (1920, architect Walter Würzbach, Berlin; destroyed in World Wor II). Billing, a brilliant self-propagandist who understood his era soon found limiself celebrated as the spokesman of a new 4rchitekturusillen (architectural will) in plastic ort.1 During the early twenties Belling created a numher of remarkable works in conjunction with architects. These collaborations signal his transition from Expressionism to Neue Sachlichkeit and testily to his ability to integrate sculpture within architecturn) settings. In this respect, the fountain in front of the Berlin villa of the lawyer and notary Goldstein (1925, concrete with metal spirals; destroyed 1926) was noteworthy in its combination of Constructivism and the machine aesthetic that characterized this period. Yet during the late twenties. Belling disappointed many observers by moving in the direction of stylized, Art-Deco-like figural sculpture. After his 1957 emigration to Turkey, where he became chairman of the sculpture department at the Academy of Fine Arts in Islanbul and then joined the architecture faculty at the Istanbul Technical University, the artist attempted to remcorporate elements of his progres sive early ocuvre, but the late abstract works mainfest his metamorphosis from a genumely experimental artist ugo a conforming modernist

helling began his career as a sculptor after serving an apprenticeship from 1905 to 1907 as a Modelleur , modeler), Alemplustiker (maker of small sculptures) and sculptor. With his colleague F mit Nasedow, he established an independent studio for decoration, Alemplustik, and arts and crafts in Berlin. In 1909, he began receiving commissions for set designs, including work for the important theater director Max Berlin hardt. In 1912, he entered the Kunstakademie in Berlin Charlottenburg, where he worked in the studio of

1. Pr. a Westkenn, "Anlieks des Architekturwohens. Das Kuresthiatt, vol. 4. no. 12, December 1920, p. 366 Peter Breuer, a sculpture professor at the kunst akademie, until 1922.

Belling's earliest independent works in three dimensions, Hounded Soldiers (1915, bronze), Combat (1916, bronze), and Female Dancer (1916, gilded wood, three versions: Saarland-Museum, Moderne Galerie, Saarbrücken, Georg Kaibe Museum, Berlin, kunstnauseum, Dusseldorf) justify art historian Alfred kuhn's classification of lum as a "sculptor of rhythmic motion." Belling later characterized this first phase of creativity himself, "Masses are broken and pierced," consciously turning away from the blocklike mass. At the beginning the figures are shit realistic; then they become freer."3 In its contrast between body and garment, Female Dancer is remanscent of the Jugendshi character of such works as Hoetger's figure for the Fountain of Justice in Elberfeld (1910, bronze, destroyed), its serpentine turning and the symmetrical posture of the arms may be compared to Georg Kolbe's Dancer Aymsky (1914, bronze). But with respect to formal abstraction, Belling's figure surpasses these other sculptures. The starkly angled limbs create an expressive spatial dynamic of motion, foreshadowing later sculptures which share the dance monf, such as Group Dance (1917; destroyed). While neither the later work nor Female Dancer attained the level of the prewar works of Archipenko (e.g., Bed Dance, 1912 - 45, fig. 2, p. 55), Belling did achieve this in his Expressionist groups of 1918, The Man (limestone, Museum Folkwang, Essen) and Squatting Man and Standing Homan (plaster [Gips], destroyed).

Belling continued to simplify physical forms, reducing the human figure to a cipher With Triad, his second phase of creativity began. This sculpture was entered in the *kunstausstelling Berlin* of 1920 in the true spirit of the Gesamthunstweek, and the artist supposedly intended to recreate it in another version "six meters high, built of brick and colorinly plastered." The abstraction of the dancers' forms cannot be regarded as a singular phenomenon. Other Berlin sculptors such as Karl Herrmann and Garbe were pursuing a similar goal by this time. Herzog had attained completely abstract works in 1918-19, and Wauer was working even earlier, in 1916, with pierced masses (e.g., Living Iron, bronze). What distinguished Belling was the methodical nature of his ideas. Triad is a sculpture in the round, meant to be seen from multiple viewpoints. The formation of three-dimension ally effective Raumkörper (spatial bodies, Beiling's term) through use of clear cubic forms was the consciously articulated, progressive element in Belong's sculpture. This element was cited by him as characteristic of his plastic art in intentional opposition to the "picturelike" compactness of the sculptures of the Mumeh classicisi Adolf von il.ldebrand

Belling's concept of "tectonic form" was expanded

^{2.} Gallery Weybe, New York, Belling, exh. cat., 1955.

^{3.} This piece appears as number 1096 in the catalogue for the *kunstausstething Berlin*, 1920

in his construction of entire rooms as Raumkunst (spatial art). These projects, as previously mentioned, originated in collaboration with Novembergruppe architects Walter Würzbach, Max and Bruno Taut, Alfred Gelthorn, and Wassili Luckhardt, and were followed by designs for advertising. The latter included a sculpture for an automobile company at the Berlin Avia Speedway (1920, painted cement; destroyed), designed in collaboration with Luckhardt, and papier maché mannequins for the windows of department stores in Berlin and Paris. While these works were created primatily as a means of financial support, they reflected the eelectic styles and influences that are seen in Belling's sculptures of 1921

In this same year, Alfred Kuhn declared, "Possibly after so much deceptive Expressionism, so much mendacious eestasy, the exclusively intellectual, which without a doubt is more in time with today's mentality than righteous screams and gestures of embracing mankind, must again be stressed."4 Inmaking this statement, kubn was referring to Archipenko's development, but he could have been describing that of Belling, whose Gesture of Freedom (1920, mixed media: wire, cloth, and plaster; destroyed) had already parodied Expressionist-revolutionary pathos. The Mahogany Head of the following: year (cat, no. 30) presents a mixture of Expressionist. characteristics and the Neue Sachlichkeit's smooth ness of form. The head depicts a character typical of the revolutionary postwar era, the fanatic agitator (cf. Feliymuller's painting, Otto Ruhle Makes a Speech [1920, Nationalgalerie, Berlin, DDR], and George Grosz's caricatures). The strong emotion and tight Cubist and Expressionist formal language of Gesture of Freedom are combined in Mahogany Head with the "spatial body" concept. The face is trohowed out so that the nose appears to be freestanding, as if stretched on a frame between forehead and upper lip. and the cylinders of the eyes protrude. A dynamic structure of individual forms has been developed out of alternating positive and negative volumes. At the same time, elements of abstract African sculpture have been combined with those of mimetic natural. ism: the mouth is opened in a scream, the eyes in an excited glance. In such hybrid forms, the final stage of Expressionism, or rather its transition into other stylistic forms, is documented. The hollowness within the head, the abstraction of parts of the face (nose, lips) anticipate Belling's later head constructions (e.g., Sculpture 23), whereas the base combined with the shape of the neck anticipate characteristics of the portrait mask of the director Joseph von Sternberg (1930. bronze),

Organic Forms. Striding Man (cat, no. 31), of the same year as Mahogany Head, demonstrates how closely combined objective and expressive forms were in Belling's work at the beginning of the twenties. Of course, here the influence of Italian Futurism was stronger, as can be seen in the dynamic, spirallike.

turning motion of the figure, the opening up of volume, the simultaneity of man and machine, technical power and organic form (cf. Umberto Boccioni's Unique Forms of Continuity in Space, 1913/cast 1931, bronze)

In the course of the twenties, Belling's popularity increased, primarily as a result of his architectome works, in 1924, a one-man exhibition was arranged for him in the Nationalgalerie, Berlin, and the wood version of Triad was purchased by that museum. Beiling demonstrated his skill as a craftsman in large commisstoned works for German and Dutch labor unions (1925-32), which be executed primarily in metal. One of the most original portrait masks of this time is that of the well known Berlin collector and dealer Alfred Flechtheim (cat. no. 52), Here Belling has reduced the portrait to the most characteristic facial features, the fashioning of which is similar to a carreature (see fig. 5, p. 77). This sculpture, which appears to be without mass or weight, originated as a wire construction. In its inflization of negative form as a plastic means, it follows Archipenko's works of the early twenties.

When, at the beginning of the thirties, Belling's style changed to one of naturalistic classicism, this only increased his public recognition, as was evidenced by his election to the Akademie der Kunste to 1951. In 1957, however, his artwork banned in Germany—*Triad* was shown at the *Entariete Kunst* exhibition—Belling emigrated to Turkey. After 1945, his final phase of creativity began, including abstract-symbolic and some neo-Jugendstil works. Not until 1966 did Belling return to Germany, settling in Krailing near Munich J. H. v. W.

Conrad Feliamuller worked in three dimen sions for only a single year of his long artistic career. Five of an original group of either seven or nine wood reliefs and sculptures are preserved, all of them were inade in 1923. These

figures, as singular as they are when compared with his paintings and graphic works, are significant because they were made during a period in which the artist abandoned his earlier hypressionist convictions for the more naturalistic approach which he main tained for the rest of his life. Although they are not typical of either his earlier or later works, these sculptures are significant as examples of the stybsuc search undertoken by many other artists of Feltymulier's generation at this time.

Felixmuller was a wunderkind - at age tourteen he began drawing lessons at the knustgewerbeschule in Dresden, From 1912 to 1915 he studied painting at the hunstakademie, Dresden, His first exhibition was held. in 1914 at the then famous J.B. Neumann Galerie in Berlin. A year earlier he had completed a portfolio of thirteen woodents, Songs of Pierrot Lunaire, Which was published in 1915 by Euril Richter's gallery in Dresden, In October of 1912, Felix muller had attended a performance of Arnold Schönberg's melodrama Pierrot Lunaire, op. 21, based on poems by Albert Giraud, It featured Albertine Zehme, who spoke and sang dressed in a Pierrot costume, while the orchestra played behind a screen. This new music and its exciting performance moved Februardier deeply. prompting the woodcuts which, although obviously related to work by Munch and the Brucke artists, made free and individual use of the Expressionist idiom. Schonberg, impressed by the portfono which Felixmüller had sent to him, invited the young artist to the first performance of his Gurreheder in Leipzig. This meeting resulted in an astoundingly sure etched portrait of the composer, which swelled the graphic ocuvre of the seventeen year-old artist to forty-four works. Perhaps the youngest accomplished artist in Dresden, Conrad Fehrmuller was also undoubtedly one of the most talented. Furturately, he was not drafted until almost the end of the War in 1917. He abhorred the fighting and refused to serve actively. deciding instead to work for a short period as a nurse. in a psychiatric hospital in Arnsdorf.(

In 1916, Felixmatter had begun to attract likeminded men and women to the Expressionist soirces which he held in his Dresden studio to encourage young poets, writers, political activists, and artists to exchange their views of the times and of their art. During this period Felixmatter became acquainted with Herwarth Walden and his journal *Dec Sturm*, and in 1915—16 contributed graphic works to that publica tion, as well as exhibiting in the Galerie Der Sturm. In the politically aggressive journal Die Aktion, and subsequently began to publish graphic works and articles there. This friendship lasted until 1928. Felixmüller's activities in Dresden multiplied. Be published work in many of the Expressionist (onroals such as Die Sichel (The Sichle), Die Schöne Rarität (The Beautiful Curlo), and others. He became cofounder of the influential journal Menschen (Mankind) and when the War was over became the leader of the Sezession: Gruppe 1919, which was composed of the most gifted young artists in Dresden, including Otto Dix, Lasar Segail, Otto Schubert, Otto Lange, Forster, and Voll.

titer having organized the Sezession's first two exhibitions, Felixmüller became disappointed in his colleagues since they did not share his strong political commitments, and he left the group. In the meantime, he had married Londa Frenn von Berg, and after a short period spent in Wiesbaden visiting an early patron, the collector Reharich Kirchhoff, he settled with his young family outside Dresiten in the small town of Motzsche and tried to earn a living. In 1920, Fehamüller received the Grosser Staatspreis für Malerel (Great State Prize for Painting), a prize which granted its winner one year of study in Bonne. Instead. of going to that inflation-ridden city, however, Fehamulter obtained permission to spend the allotted time in the Rahr district, where his brother was a mining engineer. While there, he discovered the barsh and poverty-stricken world of the nuners which he depicted so convincingly that the famous comedy writer and dramatist Carl Sternbenn credited himwith having painted the first true proletarious?

A slowly developing disappointment with the Weimar Republic and the necessity of supporting his fainrly led Felixmuller to a change in style. This began with slight modifications in the coloration of his paintings, greater naturalism in his graphic works, and increased classicism in his portraits. Fellymüller's great woodcuts of the welr-known German painters Lovis Corinth (1935) and Max Liebermann (1926) and dramatist Carl Sterniteim (1925) are high points of this new stylistic direction. Felixmuller never joined the Neue Sachlichkeit movement. He remained an "engaged" artist, but his work shifted from an agitated, political stance to a more balanced view of life. His concern with the didactic potential of his art is demonstrated by a number of graphic portfolios which he produced at this time.

In 1937, the Nazis confiscated 151 of Feliamuller's works from various public collections. Prior to this time, they had exhibited 40 of them in an exhibition of "degenerate" art called *spiegelbilder des l'erfulls (Mirror lmages of Decay)* held in April 1933 in Dresden; now 7 works were included in the *Entartete Kunst* exhibition in Minnich

During the Nazi period, Ferixmuller continued to work with no chance of exhibiting, and at the very end

USee his autobiography entitled "Der Prolet (Ponecke)," Die Aktion, vol. 10. no. 25 - 24. June 12, 1920, cols. 555 - 56.

Carl Sternheim, "Felixmutter," Der Geerone, vol. 15, no. 19, October 1925, pp. 881–87.

of the Second World War he was drafted. His house and studio in Berlin were bombed. He was taken prisoner on the Russian front and only returned to Germany in the fall of 1945, bi 1949, he was appointed a profess ir of painting and drawing at the Mortin-Luther Universität, Halle. He retired in 1962, again moving to Berlin, where he died in 1977. Prior to his death, however, he had the satisfaction of seeing himself "rediscovered" in a number of exhibitions in presti gious museums in both East and West Germany. While his later, more realistic paintings and graphics received due recognition and praise, the public was especially surprised by his earlier, powerful Expressionist works, which had not been seen for many years. Feltymuller was none too pleased by this emphasis on works which he regarded as youthful aberrations; as early as 1926, he had attempted to "reearl" such works, trying to exchange them for more recent productions.3

In the few sculptures that Fehrmuller created, one can detect forms that are had used in graphics and jaintings, in combination with hints of his new stylistic direction. All of the sculptures represent erota female nudes, let while some of the sculptures are related in their reference to primitive fertility fetishes, the variety of the forms is remarkable.

The Nude in Coat (cat. no. 35) is the most Expressionly of these sculptures. The effect of the erotically distorted breasts and hip is strengthened by the triangular form of the face. Neither the feet nor hands are sculpted in detail and the elongated neck emphasizes the difference between the turn of the head and the focus of the eyes. An earlier color hthograph of 1918, Loring Homan (Solin, 140) as well as the woodcut Flouing Hair of the same year (Solin, 156) reveal the artist's preoccupation with hair as a dominant decorative month. The similarity with the engraving emitted Beloved II (fe (cat. no. 35) is obvious, although the relief is more provocative and forthright.

Standing Yude with Flowing Hair (cat. no. 5b) again displays the hair motif and exaggerated Expressionist concerns. The torso of a nude woman is framed by an undutating mass of hair; her left hand supports her left breast. Her head is lifted to the right and slightly downward. The facial structure is simplified but natural enough to be interpreted easily as a thoughtful, meditative expression. The distance between chin and breasts is unnaturally extended and accentuated by the long, flowing hair

While all of Februauller's reliefs and sculptures are erotic, their expression ranges from the bluntly provocative to the dreamy and contemplative. When one compares the earlier woodcuts and hthographs of 1918, for instance, with some of the etchings in the 1925 portfolio entitled *Homan*, the position of the sculptural works at the threshold of a changing style.

becomes clear. The Expressionist Felixmuller had begun to see life differently, as had so many other Expressionists of the "second generation" PW G

Freundlich

Otto Freundlich

Born 1878, Ste.p (Pemarania)

thert 1942 or 1943, arob this at the

Mardanek concentration camp

near bold in Poland

Otto Freundisch, one of the pioneers of abstract painting, left behind a small last incomparably original plastic ocuvre. Its importance for the development of modern sculpture, however, has only been recognized during the last few

years. From 1902 to 1904, Freundlich studied art history with the famous scholar Heinrich Wolfflin. He did not begin his artistic career, however, until age twenty-time, following a stay in Florence. Freundlich himself felt that his real talent was painting and not sculpture, in which he engaged only sporadically and in coupinction with his work as a painter. Paralleling the importance of his late pictures, his sculptures attained greatest significance after 1925. Expressionist character istics imbue his entire ocuvre, which is indebted for its more Constructivist attributes to the Parisian avant garde (Beginning in 1908, Freundlich resided primarily in Paris)

The artist's first creative period, from 1907 to 1921 had its roots in Jugendshi and turn-of the century ideas of Gesamtkunsticerk. His plastic art followed his growing painterly abstraction but with a certain lag this is explained by the special problems inherent in sculptural realization.

Freundlich began a series of sculpted heads in +900 = 07 with a mask, described by the artist himself as a Medusalike, highly stylized self-portrait" (plaster Hips), lost). In the Standing Mask (cat. no. 39) and Wale Mask (cat. no. 58), architectoric construction prevailed even more distinctly over the objective undivicinal form. The absence of the neck in the Standing Mask emphasizes the plastic structure; chin, nose, mostli, and forchead are elementary building elements of the head. Yet the anumated surface and undulating contours still display Rodin's influence. In his premotes, Eccumble hundreated that "from 1907, independent of any school. I began in my painting to utilize colorful, clear, and purely constructive spaces, lacking in either naturalistic or impressionist elements, and from 1908 on I have been faithful to this technique "! Such tendencies in Freundlich's sculpture were first. suggested by the 1910 Bust of a Homan (plaster [Gips].) Wahraf Richartz Museum, Cologne), in which the surface of the face is tightly stretched and rhythmically or trasted to the incised eyes and mouth. The series of wads reached its mitial high point in the larger than life sculpture of 1912, The New Man. This work was Bustrated by the Nazis on the cover of the 1957. Entartete Kunst exhibition catalogue and thus gaine a an unfortunate notoriety (fig. 1, p. 85). Here the headhas been transformed into an architecture of basic pastic masses. Its surface is animated not in an Impressionistic manner, but by the hudding up of bits. of clay, giving the sculpture the quality of masoury The angular heaviness of this upturned head, the pro-

L Otto Freumatich, "Autobiographische Notiz," 1944, in Nehrften, ed. U. Bonnen. Colegne. DuMont, 1982, p. 252 ff. nounced facial features, compressed contours, and emphasized (aw are reminiscent of Easter Island) heads. In the few paintings extant from this period (e.g., Abstract Composition, 1911, private endection, Hamburg), a comparable abstraction is noticeable optical impressions were transformed into a system of rhythmically acranged, sharply delimited spaces, testorically fitted together. Freundlich denied the influence of Cubist painting, although he was a friend of Picasso and well informed in regard to Cubist developments (in 1909 be had a one-man show at Clovis Sagot's gailery).2 Yet a stylistic comparison of his paintings from 1911 to 1912 with those of Francis Picabia, for example, from the same period (e.g., Procession in Secille, 1912, Rothschild Collection, New York) reveals distinct parallels which are hardly concervable withont a knowledge of Cubism

By the beginning of World War I, Otto Freundlich had created an important early ocuvre that had received recognition at a number of international exhibitions, such as the *New Secession Berlin* (1911–12), the Cologne bonderband exhibition (1912), the *Moderne bianst Kring* in Amsterdam (1912), Herwarth Walden's first *Herbstsalon* (1913), and the Cologne *Herkbund* exhibition (1914). The prewar years had provided him with new sources for the development of his ideas concerning *Gesanitianswerk*. This acquaintance with Jean Arp and Arp's circle, the tapestries he designed for the two Van Rees, and his study of Mediseval standed glass were particularly influential in this regard.

Shortly before the beginning of World War I, I reundlich returned to Germany and served as a medic in Cologne, yet even these adverse conditions did not discourage fam the a letter of November 15, 1916, he wrote, "The more unspiritual, the more brutal the present, the more spiritual, the finer things one must do. That is strength" Through the politically active writer Ludwig Buliner, he established closer contacts with the antiwar movement surrounding the periodicals *Die*. Iktion and Zeit Echo (Echo of the Time), for which he wrote articles and produced graphics.

Freundlich's first experiments with abstract sculpture began about 1916 and resulted in rhythine configurations emphasizing the horizontal dimension, their homorphic shapes were evocative of Arp Freundlich's modeling in accordance with the principles of rhythinic planes was probably advanced considerably by his work in stained glass and mosa ics.4 The large mosaic Birth of Man (1918–19, Grosses Haus, Stadtische Buhnen, Cologne) was commis-

- 2. The Parisian art deaters Clovis N. got and Damel Kahaweiler were two of the most apportant Lubist deaters

- I In his text of 1934 "Die Wige der abstrasten kunst." Freundlich himself eited the techniques of stanted glass and the saw is examples of the free organization of two-dimensional areas. See Aust. Otto Freundlich 1878—1943. Aus Briefin and Aufsätzen, 1960.

Feinhals, who supported Freundlich as early as 1915 and financed his Cologne studio. During the period of 1919–20, a time of new beginnings and ideas of community. Freundlich created another large architectural mossic, a memorial to the Wissinger family in the Stahnsdorf cemetery near Berlin. This work was a collaboration with two Novembergruppe colleagues the architect Viax Taut and the sculptor Rudoif Belling Freundlich's contribution to this joint venture was the sculpture for the tombstone.

Frequency's development during the twenties was characterized by increasing abstraction and the complete remineration of objective detail. It can be traced particularly well by considering his stained glass windows from the first half of the di cade. Work in this medium directed Freund is h's attention increasingly toward problems of light in painting, where his contrasts of the it and dark communicate a polarity of meaning. Light is not a means of creating illusions of space, but rather a substance that constitutes forms. Freundlich's augular breaking up of two-dimensional planes came about when he became acquainted with what he termed

"The infiniate combination of all pictorial process each one of which, like a cell in an organism, is transferring power to another cell, resulting in an unitabilitied circulation of power throughout the whole organism. I had to eliminate the egocentric element, so closely associated with the depiction of man, plant, and object, I had to arrive at a kind of dialoctic language of the colors themselves.

Such insights had consequences for Freundheh's sculptural modeling With regard to its degree of abstraction, the *Hend* of 1925 (plaster, destroyed). inight be considered a nonlightative architecture of plastic masses, let the sculpture derived its blocklike expression specifically from this objective ambivalence. As in the case of the earlier beads, the composition is expressive but has become more compact and dynamic. The Head's structure of restrained upward movement was developed through the contrast of towering and hanging volumes, as well as the consequent activation of the spaces between them. It is only a small step to the two mountmental sculptures. Isrension (1929, bronze) and Architectural Sculpture (1934, bronze), with which Freundlich, now a member of the Constructivist group Abstraction Création (Abstraction Creation), attracted attention in Paris-These two sculptures display an ambiguous verti cality; they are not modeled out of one mass but are built up from individual, independent forms - a process of accumulation comparable to the construction of prehistoric dolmens. These two pieces are the most significant in Freundlich's sculptural ocuvre

Freundlich des eloped his late work with an amazing consistency and under the most difficult material conditions. During the thirties the constant theoretical reflection that characterized his career reached a philosophical penetration of the highest level, as is: evidenced in his writings. Whereas in Germany his works were removed from museums and displayed at the Entartete Kunst exhibition of 1957, they continued to draw attention at important international exhibitions, such as the Base) Konstruktwisten show (1957), the Amsterdam Abstrakte Kunst exhibition (1958), and the London Modern German Art exhibition (1958) M. the beginning of 1939, Freundlich, who was Jewish. was interned. He was released the following year as the result of Picasso's intervention. Soon after, he succeeded in fleeing to the eastern Pyrences, where he went into hiding until 1912, la December of that year he was perested at St. Martin, de Lenouillet and tiltimately deported to Poland. He either died en route or in the concentration camp of Majdanek near Lubbit

In the fifties, Freundlich's Paris studio in the ruc be not harbusse was opened to the public. The influence of his painting is recognizable in the vivid work of the Foole de Paris (among others that of Serge Pohakoff and Maurice Esteve). Since the sextices considerable and growing interest has developed in Freundlich's late projects such as the *Lighthouse of the Seren, Irts* (c. 1956, plaster *[taps]* model, Estate of Otto Freundlich, Pontoise, France), a construction which was plantied to accommodate the sculptures of a number of artists, — J. Garbe

Harbert Garbe

Born 1888 Berlin

dred 1945 as French prisoner of war

Herbert Garbe studied sculpture at the Kunstgewerbeschule in Munich and at the Kunstakadenne in Berlin (1910–12). After completing his training, he mantained a studio at the latter institution. His early sculp-

Surfaceful Rococu art," were figural, decorative, and characterized by rhythmic motifs depicting motion. Due to Garbe's military service during World War I, his early ocuvre is not extensive, yet it is important insofar as such works as the *Tragic Group* (1912, plaster (6498), destroyed) reveal the beginnings of his later two-figure, dancelike sculptures of 1919 ~ 20. This later group represents the sculptor's brief Expression ist interfinde, which would be minningmable without the influence of the group motifs of Archipeoko and Belling

Even Garlie's striding mide of 1948, Halking Homan (plaster /Gips/, destroyed), with its head leaning back and its hands groping and outstretched, is still so conventional in its static composition, geared loward a single view, that one could never have predicted Garbe's work of the following year - couples engaged an complicated, intertwined motions. The sculptures of 1949 - 20 are the work of an average artist who temporarily assumed progressive traits due to his association with the inspirational Novembergruppe, Garbe's most important encounter in this circle was with the sculptor Emy Roeder, whom he married in 1920, Shared characteristics may be seen in the work of these two artists, particularly around 1920, including the use of common motifs - for example, in Sleep. Lovers of 1019 (cat. no. 40) and Roeder's Steeping Couple (1920, stucco, destroyed). During this period, both artists were intensely preoccupied with the fashioning of rehel's (cf. Garbe's rehel Three Homen, 1919-20) wood, Nationalgalerie, Berlin), an interest which for Garbe served as pictorial clarification of his sculptural motion-motifs. Garbe's and Boeder's choice of wood as a preferred material allowed their plastic forms new concision and angalastity

There were, of course, significant differences in their work as well, whereas Fmy Roeder was concerned with depicting her own spiritual experience by means of a closed, outwardly calm form, Garbe sought to convey the same feelings in extroverted depictions. of motion. His sculptural groups of 1919 - Erox (wood) lost), Bine Group (terracotta, destroyed), Sleep Lovers, and Group of Death (two versions; both lost) now origanated in quick succession. The themes of these works are those of Expressionism - croticism conflict. custasy. As in expressive dance, the motion-motifs are composed of rhythmic parallels and contrasts. The afterweaving of the bodies, angular positioning of arms and legs, and inclusion of negative space are close to Betting's 1917 19 formulations. For example, the horizonial extension of the sculpture Sleep may be compared to that of Belling's Group Dance (1917,

destroyed); Eros is similar to Belling's Standing Man with His II (fc (1918, plaster [Gips], destroyed). With respect to the contrast of movement involved in a standing figure bending toward a reclining one, both Eros and Sleep/Lovers are modeled on Archipenko's Dance Duo (1912, bronze), Archipenko's sculptures were shown in a large one-man exhibition in Herwarth Walden's Galerie Der Sturm in 1918.

Of course, these comparisons can only go so far; Garbe's dancelike groups appear more conventional when viewed in relation to Belling's Triad (fig. 2, p. 77) - an abstract sculpture which nevertheless depicts dancers. Belling was much more commit ed to structural problems of *Raumplastik* (space sculpture) and the equal treatment and interdependence of positive and negative volumes. Garbe's work is closer to the sculptures of Novembergruppe artists Georg Leseluntzer or Max Krause that are characterized by simple reductions of physical forms. The contrast between compressed and extended shapes seen in Sleep / Lances is likewise limited in its relationship to Belling's Group Dance, for Belling has presented almost mechanical dynamics of motion with no mimetic quality, whereas Garbe in his motion-motifs has depicted elementary feelings of mit that affection and commitment. His fashioning of the surface similarly serves as an expression of life processes. The cubic strengthening and binding of the plastic form in Sleep/Locres resembles armor, corresponding to the protective, closed quality of sleep, the angular, broken surface of the lost Group of Death sculptures corresponded to ideas of growth and transformation.

Garbe and Roeder collaborated closely into the late twenties, but the differences between their sculptural ideas became more and more obvious. Garbe's in chiration toward monumental individual figures was already noticeable in their joint exhibition at the Galerie Ferdinand Moller, Berlin, in 1927. At the beginning of the thirties, such a style was in complete agreement with their prevalent neoclassicism and brought Garbe numerous public commissions for nudes, religious figures, and portraits. In 1956, the National-galerie in Berlin bought the bemale Harcester (1956, stone), an idealized depiction of a worker. At the same time, Garbe created genrelike studies of motion such as Goul keeper (1950, plaster [Gips], destroyed).

In 1936, Garbe was appointed as sculptor Richard Scheibe's successor to teach sculpture at the Stadel sche Kunstschule in Frankfurt am Main. He held this post until he was fired in 1941, when the SS newspaper Schwarze Korps located some of his early Expression ist work, and he was declared a "cultural B-dshevik".

During the years prior to World War I, Cubism creat ed no greater reverberations outside France than in Frague, where its interpretations were often wholly independent of French models, Art histori ans, collectors, and local

artists' groups appeared as mediators between Paris and Prague. Between 1910 and 1915, the collector and theoretician of Cubism Vincenc Kramář acquired important works by Picasso, Braque, and Derain. Using Expressionism as a point of departure, the Czech painters Emil Filla, Bohumil Kubista, Vincene Beneš, and Antonin Prochazka, the sculptor Oto-Gutfreund, and a few architects formed the Skupina vegtaruých umelců (Group of Fine Artists). Between 1911 and 1915, they propagated Cubism as the program of their generation both in exhibitions and in the periodical Umělecky městěník (4) tostie Monthly). This popularization of Cubism was advanced by the application of its principles beyond the realms of painting and sculpture - in architecture and in decorative arts, such as furniture, ceramics, and glass

Ideas concerning the picture or sculpture as oigamsm, the logic of composition, the liberation of color from its unitative function, the use of planes. clear rhythm, and geometric forms - these were taken from French Cubisin. But whereas the French one sidedly stressed aesthetic categories, the Prague foltowers strove for a balancing of rational and emotional aspects, a harmony of geometric, constructive, and expressive orders. With reference to sculpture, this had the following amplication. Gutfreund replaced the analytical brench approach to sculpture, as seen, for example, in Picasso's early Cubist Head of a Homan (fig. 10, p. 18), with the idea of sculpture as materialization of feeling: "The sculpture is a materialization of the motif's effect... The sculptor directly material: izes the vision reflected in his soul , \mathbb{S}^1 Guttreund sscutpture is a fusion, characteristic for the Prague Cubists, of "Gothic" expressive invsticism. Baroque. dynamics, and French Cubist rationality

the intention to introduce a rational aspect into the treatment of emotion was already evident in Gui freund's selection of the Frenchman Emile Antoine Bourdelle as his teacher Bourdelle's tectoric concept of plastic art impressed Gutfreund when in 1909 he attended the artist's one man exhibition in Prague; Gutfreund consequently studied with Bourdelle in Paris from 1909 to 1910. A certain proximity to the French sculptor's emotional stance may be seen in the firm, simplified form of one of Gutfreund's first independent works—a portrait of art critic and historian Antonin Matejoek (1910, bronze), a close friend of the artist during his stay in Paris and his traveling companion during a 1910 study four of England, Bel-

E Oin Guifreund, probably written in 1911 first published 1912. Quoted from Museum des 20. Librhunderts, Vienna, 1969 p. 13 gium, Holland, and Germany. Yet with respect to the tectoric structuring of the portrait, Gutfreund set his own course. "For a sculptor," he wrote in his Paris diary, "it is not enough to be skuled in mode ing. A sculptor must, above all, be a mathematician who tashions the mass according to a previously considered plan, that is, he must also be an architect."

In 1911, Gutfreund executed a number of sculptures with literary subject matter that typify the aforementioned may of elements from Expressionism, Cubism. and the Baroque. The latter term applies in the sense that the animated masses of these works function as a means of psychic dramatization. However, Gulfreund distinguished himself from Baroque sculpture and those who continued its tradition, such as Rodan, and in this difference has bus modernity. Instead of the dramatic fervour of the Baroque, he strove for an equalization of plastic energies; instead of stricturing mass, he utilized organized planes: "The new sculpture does not know weight, since volume is replaced by plane. Consequently it does not know a center of gravity. This is the basic formal difference between Baroque and contemporary plastic art.25 In addition to the deformation of natural forms, the Gothic lengthening and literary subject matter may be considered to be Expressionist characteristics. Gutfreund chose troub ed protagonists from world literature: Job, Hamlet, Don-Quivote - sceptics, ponderers, visionaries. Angst (ca). no. 42) recalls figures encountered in the writing of Dostoevski and in Edvard Minich's paintings (in 1907 there was a large Munch exhibition in Prague). Augst combines a formal system of rhythraic planes with expressive content, it embodies the welling up of fear This impression is suggested more by the angular, broken surface than by numetic expression. All lines direct the viewer's eye up the tapered form toward the licad, which remains uptouched by the system of lines. In comparison, the figure's zesture – the arms crossed over the chest and the head sunker into the garnient. is formally less productive of this effect. Sin 1 air formaprinciples are noticeable in the figures Hamlet (1911, bronze) and Don Quazote (cat. no. 45), which originated during the same year. But whereas the surface. of lugst was made dynamic through the faceting of planes, in Humlet the surface is torn open and drama tized by differently accented concentrations of form. The alternation of hollowed-cut and expressively protruding shapes, together with the faretea, lengthening of proportions, creates a bizarre intensification of expressive meaning. With regard to the combination of Gothic verticality and Cubist dynamics, the figare has been compared to Lehmbruck's Rising Youth (fig. 5 p. 147).

The surfaces of the 1911 figures are deformed and geometric, but these qualities appear merely to bave been imposed upon the sculptures as a transposition of the formal principles of Cubist painting. This treatment changed in works created from 1912 to 1915.

² Minzeum Sztukew Lodzi, 1971, p. 16

^{3.} Maseum des 26. Jahrhunderts, Vie. n. i. 1969, p. 19.

where the surface was mereasingly form up and ruptures of form occurred. The organic flexibility of the figures and literary subject matter were given up to favor of complex structures. The sculptures gained new spatial qualities, they were now dramatized from the inside out. In the Fiolonicellist (1912-15, brouze), a new systematic alternation of positive and negative volumes occurred, almost concurrently with Archipenko's experiments with concave plastic art Gutfreund's portrait Fiki (cat. no. 44) demonstrates the sovereign application of this newly acquired tech mque. Built up from an invisible core toward the out side, the forms may be read in a dynamic, hirming nor tion, Leginning at the neck through the rising checks, up to the curls of the nam (the individual forms of the face - month, nose, eyes - are included in a continuum of positive and negative volumes. Contours appear as lines of power, illustrative of the energies emanating from the center. Deep breaks in the mass and protrusions of form reveal an alternating play with space. Rhythmically structured, the composition of the head unites content and form, endowing the work with a particular kind of charm and at the same time markng its distance from the de-psychologized, systematically organized Cubist head constructions of Picasso. and Archipenko, Viewing Picasso's Head of a Human if a May 1913 exhibition in Prague, Gutfreund stated "Pleasso dissects the surface of the object, destroys its specific organism in order to build something new The unity of organism and object must be preserved."4

The closeness of Gutfreund's sculpture to Cubist problems of form is probably greatest in Cubist Bust (1912-15, bronze). This development was interrupted Ly World War I, at the outbreak of which Guifreund volunteered for the Foreign Legion and was consequently interned numerous times in a camp in southern France. There he created the abstract stulp ture Sitting Homan (1916, Nationalgalerie, Prague). which, nailed together from old boards, may be regarded as an incunabulum of Constructivist sculpture. In line with the neoclassicist tendencies of the twenties, around the begianing of the decade Gutfreund's oeuvre took a turn toward objective, realistic sculpture with social subject matter his group. sculptures Industry and Commerce (1925) painted wood, Nationalgalerie, Prague) have appropriately been termed "industry genre" by Eduard Trier.

In 1926, Guifreund was appointed professor of architectural sculpture at the Konstgewerbeschule. Prague. The next year, before reaching the age of thirty eight, Guifreund drowned in the river Moldau His most important sculptures are in the National-galerie, Prague. Whereas his realistic work was favored for a long time, Guifreund's significance as an important experimental creator of Cubist sculpture went unrecognized until barely two decades ago.

Heckel

In one of her earliest let. ters to the Hamburg collector Gustav Schiefter, Errit Nolde's wife, Ada, wrote: "Here in Dresden l'man contact with the young, active members of the Brucke, and it's very interesting and stimulating to

Recently Heckel has produced beautiful raw wood sculptures, and he made me happy by placing two of Born 1993 Dobela (Saxony) them in my room. He as a fine human being, so lyrical, so much of a feeling for poetry and desire for died 1970 Realmont of enbeauty...." This undated letter, probably written in March 1907, is an important document of the early Brücke years,2 It confirms that Nolde and his wife century - were able to recognize the future signifi-

Ench Becket

both considerably older than the members of the Dresden group and stylistically rooted in the nineteenth cance of a kind of art which only shocked most mentbers of their generation. Nolde acknowledged his debt. to the Brücke, his albitation with this group was important not only for his own painting, but also because it brought about the subsequent contact of the

other Brucke artists with Gustay Schiefler

Ada Nobie's letter also indicates how important Erich Heckel's initiative and unifying influence were at this time for the artists' group that he had cofounded. What is perhaps most surprising is the willinguess Nolde's wife expressed to have woodsculptures by Heckel, an artist who, in contrast to her husband, bad never received any training in wood carving, in her home. I mortunately it is impossible to ascertain exactly which figures she was referring to: Paul Vogt, who compiled a work index for Heckel during the artist's lifetime, identified the earliest works as: a terracotta figure of a gnomelike old woman executed. m 1904 (Yogt, 1) and two heads of 1905 (Yogt, 2 and 5). carved from alder. The natural, mythical qualities of the head of a bearded man suggest associations with the heads of mountain giants, which Nolde drew in t895-96 and published as printed postcards.3 in any event, unitual influences must be assumed, and they ultimately led to Noide's resumption of his carving.4.

Approximately twenty sculptures by Heckel can be identified from the period prior to World War I, six Innestone reliefs were created after World War II. This count excludes clay reliefs and handicrafts, several of which are known. Aside from the terrarolta of 190 k. the early sculptures are exclusively wood figures. carved from various softwoods such as alder, finden, maple, barch, acacia, and poplar. Real hardwoods such as oak – do not seem to have been used, perhaps

because it was not in Heckel's nature to willfully work against his material. The desired form had to grow out of the organic wood. Heckel sought a meeting of idea. and material more intensely and certainly earlier than his Brucke coheagues. He researched and experimented with a variety of possibinities and freely shared his results. Any kind of purism, as far as materials were concerned, was as foreign to him as formal. virtuosity. His expression was intended to reveal his unner disposition, the sculpted figure represented its creator. Those fortunate enough to have met fleckel know what this meant and can easily understand why Nolde felt so close to Heckel's wooden figures and why he was inspired by Heckel and other Bricke artists to create woodcuts. Interestingly, Nolde had not previously used this graphic technique, which may be thought of as the negative form of carving 5

Of the four Heckel sculptures in this exhibition, Carvatta of 1906 (cat. no. 45) was created first. Although an early work, it displays qualities which had already become characteristic of the artist's wood sculptures, such as a unique symbiosis of barbaric strength and sensitive tenderness. Here we also see Heckel's economical use of color, which appears to seep out of the wood, accentuating its primitive qualmy When Heckel used color in his plastic art, he did so sparingly, predominantly in the area of the head, Black dominates, and more than two colors are rarely employed

Like his colleagues, Heckel frequently depicted his wood figures on postcards which he sent to close acquaintances.9 Of particular interest is one dated December 1, 1910 (fig. 5, p. 95), which was drawn in color and sent to the art historian Rosa Schapire.7 On it. Heckel indicated that he had sent her three of his wood scriptures as well as a pewier cast by hirchner. Of the two figures impulsively drawn on the image. side, the left one can also be recognized in a still life of 1920 (Yogt, 16). Like several other Heckel sculptures, it fell vicum to the Second World War

From other such postcards and letters it is evident that after paying visits to the Britege artists in Dresden, Gustav Schieffer was so unpressed with their sculpture that at the beginning of 1911 he sent them. trunks of maple trees from Hamburg (see p. 114). Heckel "chopped" two lemale figures out of this dense. wood.8 One of these, Talt Standing Human, was acquired in 1950 by director Max Sauerlandt for the Hamburg Museum für Kunst und Gewerbe and was published in an essay by Sauerlandt (included in this catalogue in translation, see pp. 51 - 55; fig. 5, p. 54) the Discort of Doctor

See Heckel's letter to Schiefler of February 1911.

The second figure carved from Schiefler's maple, Standing Girl (fig. 1, p. 94), remained in the artist's possession and was acquired by the Hamburg museum in 1966.9 (The largest of Heckel's extant wood scriptures, this figure is unfortunately in fragile condition and could no be included in this exhibition.) The smaller Crouching Homan (cat. no. 46), carved out of soft linder, dates from the same year, it too, is riddled with cracks and shows considerable touching up of the surface by the artist. This sculpture can be identified in one of Heckel's paintings of the same period (Vogt, 1912/46) and in a woodent as well (cat. no, 50), in Heckel's paintings, sculptures appear frequently (see Vogt, 1906/8), perhaps for the first time in a self-portrait of 1906 and certainly not for the last in a still life of 1960 (Yogt, 6) that most likely shows an early figure which no longer can be identified. Other paintings and drawings circa 1912 also depict sculptures; old studio photographs (figs. 2 and 5, pp. 94-95). provide an add nonal indication of Hecket's sculptural product on at this time, which has been largely lost 10 During this same period, Hecke) began sending many of his works to exhibitions 11

In the essay mentioned above, Sanerlandt compared the Tall Standing Heman of 1912 to "a Madonna of Annunciation...which shyly covers its nakedness, so to speak, in itself." Thus he acknowledged the religious element in Heckel's art, which achieved particularly strong expression in his sculpture. In the same year, feckel created the life-size figure of a naked praying man with arms uplifted (fig. 2, p. 94) and the clothed Draped Homan (fig. 6, p. 95), which has been at the Brücke-Museum since 1966. The latter work seems to have its models in Gothic sculptures of Mary under the Gross. Perhaps these works by Heckel also suggest that foreboding of the First World War with which the German Expressionists are often credited.

The erotic Bathing Homan with Towel of 1913 (cat no. 47) is certainly one of Heckel's most powerful figures. It has been privately owned by the family of Max Saverlandt since 1920. Saverlandt was acquainted with Heckel from before World War I, and be was the first German museum director to regularly include the sculpture of the Brucke in the exhibition and acquisition activities of a public museum.

Heckel served as a medic in Flanders during the First World War, which determined a more significant

break in his sculpture than in his painting. The last wood figure to have been preserved is the Standing Figure of 1920 (cot. no. 48). The slender girl's figure, which has been peeled out of soft poplar wood and remains enveloped by it, surpasses the earlier figures in the flowing compactness of its rhythmic contours and smooth surface. The sculpture derives front a time when many of the nudes in Heckel's paintings, most of which he created at Osterholz on the Baltic Sea, looked like animated wood figures which had found their way out of the studio and back into nature. On the occasion of a visit to the Breslau studio of his former Brucke colleague Otto Mueller, Heckel expressed great interest in Mueller's carved, jointed, marionettelike figures.

Although we know from his letters that other figures originated in Osterholz during the summers between the two world wars, ¹⁵ it may be said that Heckel ended his activity as a wood sculptor and an Expressionist graphic artist with *Standing Figure*. In its wholeness and graceful dignity it may be interpreted as the expression of his own philosophy of life, From 1920 until his death, he devoted himself to exhausting the possibilities inherent in painting and graphics. — G W

After studying architecture and sculpture at the Kunstgewerbeschule in Dresden, Paul Rudolf Henning opened his own studio in Berhn in 1907 Shortly thereafter he had his first exhibition at the famous Galerie Gurlitt,

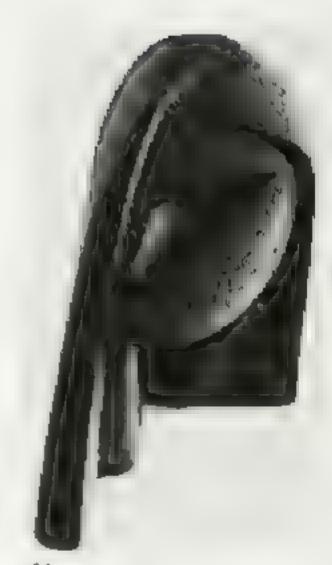

and from 1912 on he exhibited at the *Freie Secession* in Berlin. In 1914, he moved to Paris, exchanging his studio with Wilhelm Lehmbruck

Having served as a volunteer at the outbreak of World Was I he moved in 1916 to Zurich, where he quickly met Dadaist comrades such as Jean Arp. Viking Eggeling, and Marcel Janeo. On April 11, 1919, these artists formed a group, calling themselves Artistes Badicaux (Revolutionary Artists). Heriung signed the manifesto originated by this group, but it was never formally issued.

In 1919, prompted by his friend the architect Erich Mendelsohn, Henning returned to Berlin, where he became active in the Arbeitsrat für kunst. His work at this time was primarily sculptural. He executed large terracutta reliefs for the facade of the Mossebans, where the newspaper Berliner Zeitung was published. and for the Haus Grunfeld and the Haus Bahls in Berfm, including a work which employed quotations from Nietzsche's Also sprach Zarathustra as motifs Hem ang also executed significant bronze portrait busts of the Italian composer Ferriccio Busoni, Mondelsohn's wife, Louise, the artist Max Peclistem. (cat. no. 514), and others, as well as creating large sculptural works for buildings in Aachen, Berlin, Co. logne, and other cities. In the mid twenties, however, he began to concentrate on architecture, designing a number of large apartment houses and planning building programs for a section of Berlin, as well as for Nuremberg and Troppau

Henring's sculpture The Dance of Charlotte Bara (cat no. 51) was created during a stay in Ascona Switzerland, where he had redesigned the Castello San Materno for Paul Bacharach, Charlotte Bara's for their Bara was a famous dancer whose "Cathedral dance was the inspiration for the sculpture. Its three nearly abstract terracotta forms are evocative of Bara's highly stylized performances and often hieratic costinues. In the new spapers of the time, her dances were compared to lage-old priestly rituals," and Bara herself was likened to sculptures from the cathedrals of Naumburg and Strasbourg or heures in the paint of so (Homenico Chirlandaio or even Mathus Grunewald. The Dutch publication Het Folk wrote:

Her dance is the realization of faith in God. It is as if in the quietude of a cathedral the figure of a saint steps from its niche and...personifies the spirit of the but ding, and our hearts thirst for the fountain of ife. How does such a young child gain such depth and soulfulness? This is genius pure and simple, this is maturity born without the need for experience. PAV.

Oswald Herzog

Born 1881 Maynau (Silesta)

date and place of death unknown

Oswald Herzog's training as a scriptor began at an early age in Liegantz, where he was engaged in the trade of Stackhand work, or ornamental staccowork. He came to Bertin in 1900 and communed to work as a craftsman

While at the same time attending various art schools. Herzog was an established Berlin artist by the time he became associated with the famous Sturm circle led by publisher and gallery owner Herwarth Walden, who sponsored an exhibition of the artist's work at the Galerie Der Sturm in 1919. In a publication of the previous year, Der Sturm: Eine Finfahrung, Walden had introduced Herzog as an artist who was enlivening the European sculptural tradition much in the same manner as Archipenko, Herzog in turn contributed woodcut illustrations to Walden's periodical Der Sturm in 1917 and 1919, as well as an essay entitled "Der abstrakte Expressionismus in der bildenden kunst," which delineated some of his sculptural leitmotifs."

As early as 1919, Herzog was included in the membership of the Novembergrappe, whose political and artistic activities were the focal point of postwar cultural life in Berlin. A series of act exhibitions was arranged by the group in 1919—20, and Herzog was frequently a participant, in later Novembergrappe exhibitions, he served as a pary member (1922), and in the Ausstellung 10. Julie Novembergrappe (1929), he was on the exhibition committee as director of the sculpture section.

Although Herzog had achieved objectless sculpture. by 1918 49, his contribution to the history of abstract sculpture has thus far been overshadowed by that of Budolf Beiling. While the latter's pieces were lauded as more formally vigorous and tectonic, Herzog s ocuvre was valued for its flexibility and lyricism. His contribution to abstract Expressionist sculpture was recognized by art critic Alfred Nobri in his article "Die absolute Plastik Oswald Herzogs?19 Kubii described Herzog's work of 1914, a time when his sculpted subjects could still be identified as human forms, although the rhythm in these forms was the essential quality he sought. As articulated by Herzog in his Der-Rhythmus in Kunst and Natur (Rhythm in Art and Na ture) (1914), the task of Expressionist sculpture was to render the spiritual life of organic matter, External forms were seen to be expressions of inner processes of motion - "tectonics of nature" - which could be sculpturally translated through rhythm of line and plane. Herzog stressed that Futurism and Expression. tsm were to be succeeded by a Neue Sachlichkeit in which the artist would no longer allow his will to speak through the depiction of objects but would

"The forms originate individually in rhythmic impulse and fluctuate in the timely expiration of an experience," wrote Bruno Reimann in his preface to

longer be comprehended intellectually . 15

Oswald Herzog's Surfome des Lebens (1921),6 and accordingly Herzog's works were often entitled using musical terms such as Adagro, Furioso, and Harmony. His sculptural demonstrations of the energies of movement, emotion, and music evolved further into complex compositions of planes, cubes, straight lines, and volute curves. Works such as Lestasy (1919) (fig. 1, p. 101), Symphony, Strength, Joy; Sorrote (1921), and Scherzo (1927) represented the transformation of

architectural elements into sculptural entities convey-

ing cle it and emotional meaning

"Art is world, is all encompassing, is totality, is GOD.

The artist is the purification vessel for the most beautiful and most awful experiences, a frightening aestheticist, a dancer on the fields of the dead, a filter, a detoxifier. Art creates

the ethical mind, becomes since trigith. Sculpture as art is mornimental. Prashcart is rhythinical it is open passion..."

Written by Bernhard Hoetger in 1919, this passage testifies to the influence on him of Nietzsche's aes thetic and to the synthesis of ethos and eros in the art of the years immediately preceding and following World War I. It also emphasizes the significant distinction fluetger made between "sculpture," which is antitransitory, bound to the large, blocklike form, and plastic art," which is subject to the laws of painting and allows for the transitory and the momentary. This latter notion recalls Rodin, whose influence was dominant at the turn of the century.

As Lehmbruck was to do later, Horiger studied at the Kunstakadenne to Dusseldorf in 1900, he visited Paris on the occasion of the Exposition Universelle (International Exposition) and Rodin retrospective, and his enthusiasm for the city and for Rodin prompted him to remain there? Between 1901 and 1904, working under the poorest conditions, Hoctger created a number of masterful sculptures, including The Bund (c. 1901, two versions: bronze and terra cotta) and Fertility (fig. 1, p. 104). Although stylistically influenced by Rodin, Hoetger's themes were close to the realism of Constantin Meumer, and his sculptures of workers became well known in Paris.

Together with the sculptor Carl Milles, Hoeiger founded the Societe des Artistes Bealistes Internationals (Society of International Bealist Artists), and the artist Theophile Steinlen arranged for him to work for the magazine L'Assiette au Bearre (Butter Ptate). In October 1903, this periodical devoted a special issue, entitled Dur Labeur (Hard Labor), to Hoetger, Karl Erust Osthaus, who had previously commissioned Minne to create The Fountain of Anecting Jouths for the Folkwang Museum in Hagen (see fig. 1, p. 157), met Hoetger at this time and arranged for the artist's first one-man exhibition

In 1904, Hoelger created Lovers (plaster, probably destroyed), which was influenced by Picasso's rose period, and the next year, after marrying Helene

(Lee) Haken, he executed two important sculptures. Portrait of Lee Hoetger, rigidly chiseled from marble (Museum Folkwang, Essen) and the beautifu. Liberfeld Torso (bronze) Hoetger exhibited both works at the Salon d'Automne, where they were placed. next to Madlol's Homan (1904-bronze), Seeing these works, Rodin commented: "Inortger found the way I was looking for, and if I were not an old man, I would go this way, the way to the monumental, which is the only right one "6 In 1906, Hoetger created two sculptures of women - Smile and Flight of Thoughts (each of which was executed twice, o ice in gaded bronze. and once in cast stone) - works which further transcended the style of Radin's bronzes in their dense and terse forms. Hoeiger's works of this period a so display his assimilation of ethnographic art and of Paul Gaugmin's painting and sculpture. Thus, as early as 1905, Hoetger anticipated both Picasso's turn toward. the "promative" (cf. Picasso's Head of a Homan Fig. 10, [p. 18], Nelf Partrait of 1906, and Demoiselles d'Aeignon of 1907) and Brancusi's departure from Rodin's stylein about 1907 (The Prayer, bronze).

The Elberfeld Torso, Smile, Flight of Thoughts, and the Darmstadt Torso (1909, bronze; continussioned Ly the art patron E, von det Heydt) established Hoetger's reputation. In 1907, the sculptor left caris to return to Germany, where he began to concentrate primarily on crafts and furniture. He also built the Wor iswede. monument (still in existence) to his friend the painter Paula Modersohg-Becker, who had died in the same. year. In 1910, he was commissioned by You der Heydt to create the Fountain of Justice in Elberfeld (bronze, destroyed). In September of the same year, he exhibited with Wassily Kandinsky and Franz Marc at the secand exhibition of the Neite k instlervereinigung Munchen, in 1911, he was invited to join the Darmstadt artists' colony, and in the course of the next three vears, he created four large rehefs with figural friezes for the sycamore grove there (fig. 2, p. 104),7 These. works delineate a lycical Expressionism that drew increasingly upon exotic and primitive art. At this time: Hoelger was engaged in studying Bomanesque and Gothic sculpture, as well as the art of Africa and the fiar Flast.

I nike that of Lehmbruck, Hoetger's sculpture was not decisively influenced by the outbreak of the War. His art reached a highpoint in the Egyptian-style bust of the dancer Sent W Ahesa (1917, gilded bronze). The works of this period, along with those of other leading Expressionists, deformed the human figure without ceasing to embody it.

Hoeiger dedicated his *Pictā* (fig. 4, p. 105) to the workers who lost their lives in the November Revolution in Brenien and erected it at the Bremen-Walle

- 6 Interview with Roder by Lamis Vauxcelles in *Git Blas*, 1905, as quoted in Werner, 1977
- 7 Hans Hildebrandt Der Plutanenhum ein Monumentalwerk Bernhard Hoctgers, Berlin Cassiret, 1915

Cemetery* An Expressionist monument like few others, it depicts a mourning mother with her dead son, a young worker. As in Lehmbruck's drawings, the Uhrishan motif of the Pielà was adapted to an expression of ecintemporary sorrow? In 1975, the National Socialist bureaucracy destroyed this work. Hoefger's membership in the Novembergruppe and devotion to the so cialist goals of the revolution were the cause of this attack. He created another Expressionist monument to the men killed in action, particularly those of Worpswede – the Peace Memorial: Lower Sazon; Monument (fig. 3, p. 105), which fortunately was not destroyed. Constructed of brick and resembting a huge bird rising above the landscape, this work is an Expressionist phoenty. 10

Hoetger's social involvement is recognizable in other projects as well. Around 1956–17 he collaborated with Martel Schwichtenberg on plans for the Bahlsen cookie factory (the TET-cny). In 1927, Hoetger was commissioned to decorate the facade of the Gewerkschoftshaus Volkshaus, Bremen (a labor union building; fig. 5, p. 106). This became the Memorial to Labor. In 1928, he completed the eight figures making up this composition, six of which are included in this exhibition, old and young people (cal nos. 55, 54, 57, and 58), a weary worker (cat. no. 55), and a worker with a child (cat. no. 56). In the following year, Georg Biermann published an open letter to the artist, in which he described these works.

The gesture of your figures is unnerving, You are revealing the sense of becoming and of passing away, of birth and of death—yet in this instance it is a sense which does not open the gale to the last freed in but orings eternal sleep, sinking into the finite

Nungesset, "Ich bin-leh war—lich werde sein, drei Denkmillet der deutschen Arbeiterbewegung in den 20er Jahren," in Hem gehort die Belt, exh. cat., Berlin. 1977, pp. 291-92, Grusse Kunstschau, Worpswede, 1982, p. 48.

9. The Pieta is predominantly employed in those war memorials which instead of celebrating beroes, bemoun the dead. Such memorials include those by F. Bohn (I tersen). Lichnbruck (drawings, 19-8), and Hoetger (cf. Schubert, 1981, op. cd., pp. 206–12 and pp. 357ff.)

Of Hortger himself wrote a short statement about the Prace Memorial, Laurer Saxony Monument (see Gallwitz, 1922, opent, pp. 48–50; Roselius and Drost, 1974, pp. 75ft.), the text is in the Worpswede Archive, Haus in Schfuh. (I would like to think Mr Itans II. Rief, Worpswede, for his kind assistance.) On May 10, 1951, Hortger described the monument in a letter as fo lows: "... it did not turn out to be a war memorial, but a memorial of mourning, with a view toward peace."

11. Kunstverein Hannover. Die neue T.E. T.—Fabrik, exh. cal., 917. Roselius and Drost, 1974. W. Pelant, Die Archäcktur des Expressionismus, Smitgart. 1974. ATI T is a type of Egyptian anichet in the shape of a knot that is usually placed in a grave to protect the dead. L is a symbol of eternal afe.

and resting from the miscrable burden of everyday life. Almost cruel in this respect is the symbol of the old woman who, exhausted from the burden of labor, is barely able to stand on her feet any longer.¹²

In contrast to the idealized workers' memorials that were produced in the late nineteenth century (by Jules Dalou, Meumer, and Rodin), Hoetger, like Kathe hollwitz, chose as his subject matter the exploitation of the worker by capitalist industry.15 In the figures for the Bremen Volkshaus, all Mrican and Egyptian influences were overcome in favor of a new kind of real isin. Only the fact that the figures appeared nude and therefore timeless connects them with Expressionism. In 1955, the original figures were destroyed by the National Socialists, Hoetger was declared "degenerate" and in 1958 was barshly attacked in the SS pub-In ation Schwarzes Korps. For years only small bronzes. of the Volkshaus figures were kept and exhibited in the Bottcherstrasse in Bremen, But in 1974, on the occasion of Hoctger's hundredth birthday, the senate of Bremen decided to reconstruct the sculptures, and in-1979 this cycle of "life under the stigma of labor" was again affixed to the former home of the labor union. 14

A statement by Carl Uphoff in his 1919 evaluation of floetger remains significant

A new mankind will rise, a new spirit will come Because to be human means to be spiritual....By means of the spirit man is able to produce and to form new things, things that never before existed. The new spirit of man is eager for community ¹²

Joachub Karsch's early
Expressionist sculptures
primarily heads and individual figures—bear a critical relationship to the years 1917—20, during which they were created. Karsch had studied at the Kunstgewerbeschule in

Bri slau from 1911 to 1914 and from 1915 to 1917 at the knustakademic in Berlin, along with Garbe and Belling During this period, he had already developed an interest in literary characters as sculptural subjects. In the inner conflicts of protagonists created by Dostoevski, Leo Tolstoy, Franz Werfel, and Bainer Marin Bilke, he perceived correspondences to the confusions prevailing in his own time. These same characters had previously attracted the attention of the "first generation" of Expressionists. In Karsch's work, however, they received a typically late Expressionist treatment, they were given a refined psychological characterization, which is conveyed through a mannered virtuosity of technique.

The use of the head as a subject provided the sculptor with an opportunity to combine naturalism and a heightened psychological symbolism. Thus, karsch's mask of a prisoner of war, II ikulow (fig. 2, p. 112), created while he was fulfilling a civil service obligation in Silesta, is as much a psychological study as are the portraits he drew in 1917–18 for Dosloevski's Brothers Karamuzov and Rilke's novel Die Tufzelchnungen des Malte Laurads Brigge!

The head included in this exhibition, 4 Friend of Job. (cat. no. 59), may also be understood as a psychological study. This bronze is a detail from a larger than life-size group of four kneeling figures, Job and His Friends (fig. 1, p. 112), barseh created this group in 1919, the same year he moved to Berlin. It won him the Staatspreis (State Prize) - a Rome prize - given by the Preussische Akademie der Künste to enable vonng artists to study in Italy Karsch, however, was unable to make use of his stipend, as the studios of the Villa. Massimo had been confiscated by the Italian government at the end of World War I. Soon after Job and Hisbrights was exhibited in Berlin at the Freie Secession. exhibition of 1920, Narsch destroyed the group (exceptfor the head-detail) because he was unable to store. the sculpture in his small Berhn studio

Closely following the Bible (Job 2-15), the original scusptural arrangement presented Job with his three triends, Eliphaz the Temainte, Bildad the Shuhite, and Zophar the Naamathite, who came to console and lament with him. They tore their clothes in grief: "So they sat down with him upon the ground seven days and seven nights, and none spake a word unto him for they saw that his grief was very great." This theme and its formulation were clearly Expressionist, as may be seen in the close ation of the Friend's head and its

USome of these drawings from 1917, 1918 were published in Workfadt, 1918 emphatically realistic detail. Flegant and decorative lines of predominantly autonomous formal value are combined with realistically modeled, individual facial forms. The manneristically modeled, individual facial forms. The manneristically modeled, individual facial forms. The manneristically modeled, is undergably related to German late Gothje sculpture (cf. the work of Tilman Riemensehneider). The refinement of the modeling reveals a distinct, final stage of Expressionism Significantly, karschilater condemned this phase as a "mistaken direction" but, nonetheless, the motits and spiritual context of such sculptures continue in different forms in his later work.

Melancholy, a bronze male head created in 1927, translates the expressive emotion of A Friend of Job into the classic formal language of the later decade, bet the rough surface of Melancholy was intended to deny the calimness of the form. At this time, Karsch felt spiritually close to Lehmbrick and to the contemporary painter Carl Hofer, whose "clarity of soul and greatness of maturity" attracted him. The simplification of form and the sincerity of its human message became more and more important to Karsch as the mendacious herotsin and idealism of Nazi art challenged him to clarify his view. In 1957, the year of the Entartiete Kunst exhibition, he articulated his goal?

to ferret life out of its most hidden corners, where it silently reveals itself in the awkward, unbeautiful movements of the children, the dreamy state of girls in self-absorption, ugly in this thoughtlessness of which they themselves are not conscious.¹

harsch's individual and group sculptures and figural retiefs of the early thirties represent the mature phase of his work. Reading Couple (1951, wood, Nationalgalerie, Berlin) may be interpreted as a paraphrase of Barlach's Reading Manks, III (1952, wood, Nationalgalerie, Berlin). During this period harsch was concerned with the depiction of figures who shared spiritual bonds and had become one in their tonchness. His bronze sculpture of 1940 is a resigned commentary on the unrealized possibilities of his generation. On February 27, 1941, depressed and worn out, he wrote

We are, as it turns out, a generation that simply has been used up by history. The waste that has fallen out in the Great Change. After this War we will be old people and we have not yet reatly lived *

When in February of 1945 Karsch witnessed the Russian occupation and the destruction of his studio in Grossgandern near Frankfurt an der Oder, he committed suicide together with his wife. J. H. V. W.

Kirchner

Ernst Ladwig Kirchner

Switzorland

Born 1889 Aschaffenburg

dred 1938 Frauenkarch, near Davos.

On April 17, 1925, E. L.

Kurchner wrote to art his
toman Will Grotunann
"My friend de M. (Louis de
Viarsalle, Kirchner's
pseudonym) reminds me
that the time has come to
publish my sculpture. This
agrees with your decision

to publish, for historical reasons, my figures prior to those of the Swiss sculptors whom I mypred." Airchner suggested that Grohmann base his essay on de Marsalle's which, however, appeared the same year. Since the publication of that essay (which is included in translation in this catalogue, pp. 45–46), no comprehensive study has been made of Airchner's sculpture. A brief survey of his entire neutre and the state of research on it is necessary, however, prior to any discussion of the sculpture.

Kirchner was a draftsman, graphic artist, pariter, sculptor, and photographer. Additionally, numerous textiles and rugs were produced according to his designs. He has left us an important body of theoretical work concerning art in general and his own art in particular; if includes essays, his diary, and one of the most voluminous correspondences known to act history. These writings complement Erika Billeter's portrait of Airchner as an artist who sought to express hunselt in virtually all media. They complete the "environment" which Kirchner created around himself, an environment which, by virtue of the intenseinterrelationships of media it proposed, continuously provided the artist with a rich source of inspiration Kirchner's theories relating to sculpture in particular have been considered by Eduard Trier, although he refers exclusively to kirchiter's aforementioned essay.1

Kirchner's paintings have been published by Donald Gordon and his graphic work by Annemarie and Wolf-Dieter Dube in centre catalogues, Lothar Griselisch has already published much of kirchner's written work, and his correspondence with the Hamburg. collector Gustay Schieffer will soon be edited by Annemarie Dube, Nachheinz Gabler has made a special effort to produce a scholarly commentary on the drawings, sculptures, and photographs, and Hans-Bothger's secondary bibliography on Kirchner goes farbeyond the usual. Ocuvre catalogues for the drawings, pastels, and watercolors, as well as for the sculptures. must still be published. This exhibition brings us closer to a serious consideration of the sculpture, the fact that one of the exhibited works, Female Dancer with Necklace (cat. no. 60) previously was known only through a studio photograph of 1910 (fig. 1, p. 120). raises hopes that other kirchner sculptures may even tually be found

A large part of Kirchner's sculptural ocuvre has disappeared and is known only through photographs and

 See Balleter, "Kunst als Lebensentwurf," in Nationalgmerie, Berlin, 1979

2. Trien 1971 *

written references. These losses were due primarily to three catastrophes. Kirchner sculptures were among the 659 works confiscated from German museums if 1937, as part of the Nazi campaign against "degen erate art." Nude with a Bath Towel. Bathing Homan (1909–10; fig. 14, p. 429) and Couple (1923–24) (fig. 5, p. 55), which were taken from the Museum far Kullst and Gewerbe in Hamburg, for example, were lost or destroyed in this manner. Kirchner scholar Eberbard Kornfeld has described the second cause contributing to losses as follows.

When on March 13 [1958] the news of Austria's annexation sends shock waves throughout the world, [kirchner] begins to fix more and more on the idea that some day German soldiers will also stand before his "Haus auf dem Wildboden." The sculptures decorating the exterior of the home are removed and destroyed 4

Available information suggests that many of the house's interior carvings were also destroyed Kornfeld further affirms; "Undisputed... is the fact that Nuchmer destroyed and burnt all his wood blocks, and, above all, his Adam and Eve chair." A third loss most likely occurred when the Whitbodea household inventory was publicly auctioned after Erna Kirchner's death in October 1945. Whatever was not sold was burned in front of the house. Presumably son e of kirchner's decorative works and smaller sculptures perished at this time. The Kitostmuseum Basel catalogued twenty three sculptures in the estate.

in comparison to the regrettable state of preservation of the actual works, our knowledge of the mary sculptures Kirchner created is very good. Aside from the theoretical statements already mentioned and his references to his sculptural works in correspondence, Kirchner began to depict his sculpt ires in paintings. and graphics in 1909, and in 1910, he began to photograph them 5 Although Kirchner was often a hesitant participant in negotiations concerning publications. about himself, many books and articles discussing his works appeared during the twenties, and these often included reproductions of his sculptures. Beginning in 1912, kirchner sent his sculptures to various exhibitions and always made sure that good catalogues were prepared to document them. On the basis of these varted sources, today we can establish a sculptural ocuvre. of over one hundred works. Nearly all pieces were inwood, the exceptions consisted of early cast, modeled, or stone sculptures and a few embossed and ham-

mered items executed in a small format. Considering the size of this body of work and the importance of kirchner's sculptural theories, the artist's plastic work goes far beyond that of a peintee sculpture (painter-sculptor). Nirchner produced sculpture throughout his entire creative life, not only is it an integral part of his whole occure because of its theoretical and practical interrelationships with other techniques, but qualitatively it is also extraordinarily important. Nirchner was a sculptor, and, as was the case with his work in other media, he was a sculptor possessed of the highest degree of individuality.

From late 1901 through 1905 forchner received architectural training at the Technische Hochschule. at Dresden, although this period was interrupted by studies of pactorial art in Munich from 1903 to 1904. By his own account, he began to both paint and sculpt before the summer of 1905. The plastic work known to us, however, cannot be dated earlier than 1909, at though it is possible that his small modeled clay figares could have originated before then. Based on a photograph diostrating vix of Kirchner's clay figures, it seems that these works were closer in style to his post Impressionism of 1906–08. Only a single clay relief of 1909 survives from this period. The pewter figures. one of which Kirchner photographed (see fig. 5, p. 120), represent a transition to the Brucke style of [1109]~[0]

The discrepancy between the dates which kirchner. assigned to his sculptures and those we have estabhished may be explained by the fact that, after the 1915 dissolution of the Brucke, he tended to predate especially his works created in Berlin and Dresden, fearing that people might claim he had imitated other artists. As the years went on, this tendency increased and was compounded by Kirchner's failing memory. I his latter. development sometimes resulted in errors involving. postdating as well. The dating of one of the early surviving pewter sculptures illustrates this problem. che work is a standing female nude, flurteen inches inheight, illustrated by Grohmann in 1926 and dated 1915 by the artist. Let this figure was, without a doubt, created by 1911 in Dresden, during kirchner's preaccupation with Begin sculpture. (At this time the collection of the Volkerkunde-Museum in Dresden strongly inspired kirchner and the other Brucke artists). While in Dresden, kirchner also created sandstone sculptures, three of these survive

In 1904, kirchner had begun to draw on numerous European sources, which initially influenced his painting. Beginning in March 1910 when he encountered Palau and Cameroon sculpture, his plastic art was greatly affected as well. As Donald Gordon has observed, burchner's art attained liberation and independence by adopting the swelling physicality and mature plasticity of the figural frescoes of Ajanta, India, which he observed from photographs in the Dresden library.

in 1905 and copied from in 1910–11.2 Gordon reported only their influence on Kirchner's painting, but the obvious impact on his sculpture must also be noted, for after the Ajanta contact his human figures are full and spatial in both two- and three-dimensional media. This is clearly demonstrated in the sculptures of 1910–11 (fig. 14, p. 129) and to the volumes and basic postton of Dancing Doman (cat. no. 61). However, in the latter sculpture the cleance of Ajanta was surrendered in favor of the more angular and compact forms of African plastic art.

Apart from the aforementioned early works, kirchner's sculptures from 1910 on were carved or "hewn" exclusively from wood. As was the case for his works in other media, they were conceived with a definite sense of immediacy, following a few sketches. On June 27, 1914, kirchner wrote to bustay Schiefle."

The maple wood that you sent us lends itself well to being worked, it has such short fibers and is, as a whole, completely homogenous. One is tempted to polish it. I've made a sitting figure with a bowl on her fiead, and now am working on a standing one fit dancing position. It is so good for painting and drawing, thus making of figures, it lends wholeness to drawing and is such a sensual pleasure when blow by blow the figure grows more and more from the trunk. There is a figure in every trunk, one must only peel it out.

In October-November of the same year, the artist maved from Dresden to Berlin, From there he continued his periodic visits to the Baltic island of Fehrmarn, where in 1912 he drew Sketch for Sculpture (fig. 4, p. 121). The sketch shows a tree trunk which, although healthy, is rendered with attention to its deformities and spronting branches. Incorporated in the trunk is a sketch of a female dancer with a raised arm. On the back of the drawing the artist wrote

The figure on the verso remains incomplete. It is probably still lying on the Fehmarn beach today in 1912 I wanted to create a dancer, and in Fehmarn I accidentally found a piece of wood suitable for her I just drew the form of the trunk and composed and drew the figure within it. This is the drawing E. L. Kirchner 1912

From a piece of wood either found by chance or received from Gustav Schieffer, the latent figure was composed and peeled out. By avoiding any potishing, the power of the material was reinforced, the roughly carved surface usually remained visible, although from their inception kirchner always imagined adding

⁷ Begarding the extra European influences on Kirchner's art. if Schleswig-Hotsteinisches Landesmuseum and Museum für Kunst und Gewerbe, Hamburg, 1960; Senneckenburger 1972; Hentzen, 1959; and others, who refer primarily to Cameroon and Palau Begarding the assimulations from Vanta, see Donald E. Gorden, "Kirchner in Dresden." Art Bulletin, vol. 48, 1966, pp. 355–36.

color to these works. He only pulished his sculptures under special circumstances, this occurred later while he stilt was tiving in Berlin and then in Davos, where he moved in 1918

kirchner's sculpture *Head of a Homan, Head of Erna* (cat no. 67, and fig. 3, p. 44) may now be dated with certainty to the summer of 1913, on the basis of a postcard (fig. 10, p. 125) and letter to Schiefter. On the postcard, a pnoto of the head, Kirchner wrote, "Here is a wood sculpture which Eve carved from oak wood that deffed ashore" And in the letter of August 12 which followed he added

The head which I sent you is a wood carving (oak), I've made a few figures of this kind here. They give, in addition to the freedom of drawing, the cogenitry thin of the form enclosed in the block. And these two elements provide the composition of the picture.

The Head of a Homan had been initiated in many drawings, paintings, and graphies of 1912 and 1913. It constitutes a high point in Kirchner's preoccupation with portraying his wife. Erna, which, however is evidenced only two more times in his plastic art: in the "abstract" double portrait of 1928–30, Self Portrait and Erna (Swiss stone pine, Galerie Boman Norbert Ketterer, 44), and in the subdued Erna Kirchner of 1935 (Swiss stone pine, Galerie Roman Norbert Ketterer, 42). In Davos, Kirchner had discovered the type of wood frequently employed there for carving a Swiss stone pine (1990) that grows at altitudes between five and eight thousand feet. On November 2, 1918, he wrote about it to Nele van de Velde:

Now I have a wonderful kind of wood for carving, the Swiss stone pine. Eve never seen any other wood which lends itself so well to enting. These pines grow high up, close to the snow line. The wood, despite its softness, is very resistant.

In the firm, full forms of *beingle Dancer with Acchloce* (cat. no. 60) Kirchner transcended his Ajanta models, and his Brucke friends as well, for whom scutpture remained a less autonomous discipline that was more dependent on its "primitive" models. After his move to Berlin, kirchner kept a large African sculpture in his studio, and most likely used it in direct unitations. As of 1912 and later it was depicted many times; a tall, relatively stender figure with a rigid

8. Karchuer's letter of November 2, 1918, to Nete van de Velde in Ernst Ludwig Karchuez, *Briefe an Nete und Henry van de Lelde*, Munich: B. Piper & Co. Verlag, 1961, pp. 10–11

9 Airch der fiest mentioned the title Erna with Idol (Erna mit Götze) to Schiefler as the title for a woodent (Dube, 205). Wher Schiefler inquired about as meaning, kirchner changed the title (in his letter of Iuly or August 1918) to Homan with 45 vican Sculpture (Fron mit Vegerplastik). In Nationalgalerie, Berlin, 1979, Grisebach describes drawing no. 156 as an "imitation of an African sculpture, created for the AIL IM-Institut, outly four ded by Kirchner and Max Pechstein in 1914. ...(ora) communication by Narthernz Gablet, Frankfurt)."

form and smooth surface, it displays characteristics which we also find in kirchner's own sculptures of 1912 Female Dancer (fig. 5, p. 121, right) is typical in this regard, and both Nude Girl (cat. no. 54) and Nude Homan, Sitting with Her Legs Crossed Under Her (cat no. 65) were also created using these stender but find forms. The harsher and more extended forms typical of the summer of 1913 find expression in Head of a Homan, Female Dancer with Extended Leg (cat. no. 66, and fig. 1, p. 45)), Harning Nude (cat. no. 68), and Standing Female Nude (cat. no. 69). kirchner's sculp. tural activity in Berlin came to an end with inditary service and an illness which began in 1915-16. The projects of this period remained plans. These included the memorial Blacksmith of Hagen, Symbol of Har; a relief for a private residence, entitled Soldier's Death, and a type of cast from cooking pot which was designed for use during warling in order to conserve. the copper traditionally used for this purpose

After the confusing years of war and sickness, Kirchner settled down in September 1918 in the "Hans in den Lärchen" in Franenkirch neur Davos, completely furnishing if with carved Swiss stone pine. As early as October of that year Helene Spengler reported to F berhard Grisebach. "What are aged me, was a tray which kirchner has carved for his own use. incredibly exact and prefty." Letters and diary entries detail his activities further: in February 1919, he was working on two reliefs for the studio door, a painted chest with figural supports had already been completed, the first carved chairs were finished in March. in April the first bed. The first freestanding Davos sculpture, Boy with Hatchet (private collection, Frankfurt), appeared in October, and in the same month work began on a carved bed for Erna (Collection) Eberhard Kornfeld, Bern). Several sculptures with tarm life as their subject were done, among them Con-(fig. 7, p. 46), Farmer with Cow, Proucing Horse, and Female Ancestors, bureliner was inspired not only by his new home and environment, but also by the plans of Belgian architect Henry van de Velde to build. "Homes on the Lake" in Uttwil, which would have included large commissioned sculptural projects executed by Kirchner. These plans, along with all larger. commissions, remained unrealized.10 In furnishing his own home. Kirchner created what he had always desired - a total work of art. Even the pillowcases and table: Joths were embroidered by Erna and other.

HO worth lid gives an exact description of the correspondence with Henry van de Veide from the end of April 1917 to the year 1924, when I tiwil had already ceased to be a topic of discussion, yielding to plans for Airchner's sculptural decoration of the new building for the Krolier Muller-Museum. The failure of these two plans seems to have had the same cause as the faiture of Airchner's other large commissions, e.g., the painting of the interior half in the Folkwang Museum in Essen 1927—57). If one analyzes the manner of working and thinking of the persons responsible for the commissioning of these large projects, one must conclude that they lacked under standing of Airchner's art, in the Van de Velde projects, despite complete mutual respect, an all-two-divergent concept of design obtained

women according to his designs. He decorated both the interior and exterior of the home affectionately and exactly. In 1927, after giving a detailed description of all the furnishings he had created for the living room, he wrote in his diary; "Everything is Kirchner's work. And all these figures have dreamlike large faces. and they are filled with heavy inner movement": Only within the context of this larger environment can harchner's sculptures of 1919 25 be judged fairly. In crowded teliefs and compact forms. Airchner related parables drawn from his own life and the lives of the peasants around hun. The timeless Dance Between the Homen and the continually recurring March to the Meadours were depicted framing each side of the studto door, bude women supported the seats of the chairs, and time and again he employed the theme of Main and Eve. Yet only a few sculptures per se originated during these years

This changed when the faiture of Van de Velde's plans become clear and when, during 1925-26. Kirchner received new impetus from his young disci ples, the Swiss artists Hermann Scherer and Albert Muller To be sure, during the summer of 1924 he did keep working with Scherer on the furnishings for the new Wildhoden home, to which he had moved in October 1925. As Kirchner expressly remarked in a letter to Schießer of December 10, 1923, he and Scherer together created the sculpted posts for the patio. Their collaboration had already begun in August of the pre-Violis Year, when Scherer visited Eurebner for the first mic. Whereas Kirchner's sculptures of 1919 - 25 were th most cases not oded to be viewed from one side only, now he recommended creating sculptures meant to be seen in the round. Mother and Child Boman and Girl (fig. 6, p. 121) of 1925 combines the sculptural experiences of Dresden, Berlin, and the "Hans in dencar chemine the swelling physicality power of serious Apression, and representation of the simple life

During the years 1924 26, Scherer created - often together with Kirchner at Wildboden - his own limited but intense sculptural oenvre, kirchner summarized the results of his collaboration with Scherer in a photograph (fig. 15, p. 128) taken in the fall of 1924, which shows three 5cherer sculptures next to the house. Scherer's Mother Nursing Child (cat no. 117) is elevaled, and on the right is kirchner's Reo Friends, a portrait of Scherer and Muller (see also cat no. 72, and fig. 12, p. 128). During this same period, Muller also created sculptures in this "early Wildhoden style" that ixtrebater photographed in front of the house or underthe trees, observing irregular lighting. Muller presented him with a self-portrait carved from wood. A tew of hurchner's sculptures from these years have been transmitted to us by his photographs, infortunately, hardly anything has been preserved

Kirchner had high expectations that Muller and Scherer would be able to pass on his ideas about art to the next generation. When both died, one shortly after the other in December 1926 and May 1927, Kirchner

4 → Jach (1968), p. 156

lost hope, and in Miller, he lost a true friend as well. The disappointment kirchner fell may help to explain why he primarily destroyed sculptures which originated at this time. In contrast, we know of twenty-one sculptures by Hermann Scherer which originated during these three years, most of which have been preserved. They give a more comprehensive picture of the endeavors undertaken by the three artists than do the few kirchner sculptures from the period which have survived.

Thus around the mid-twenties kirchner's Expressionist period as a sculptur came to an end. During the following years his sculpture, pannings, and graphies became more abstract, reaching their most reduced forms in the early thirties, for example, in the Self-Portrutt with Frua (1952, Gordon, 946) and in the Rechning Homan (1953, Galerie Roman Norbert Ketterer, 45).

Airchner atways defended inuself ylgorously when the influence of other artists on his work was mentioned, but he did not extend this practice to earlier German or extra-European art.13 These are the influences which were most important in his plastic art; the former may be seen in the direct relationship. hetween Nude Girl (cat. no. 64) and portrayals of the Iemale body by the German artist Lateas Granach.15 In December 1919, while working on the carvings for the bedframe he created for Frna, Kirchner wrole in his drary: "How much more advanced is the Mercan in this kind of carving" Although the British art historia i Frank Whitford would have us disregard kirchner's own statements about his art in favor of relying solely on an examination of his works, this is not entirely possible. The explanation of why birchner categorically refused to acknowledge some of the obvious pr thrences on his work while confirming others with equal conviction may provide us with new tusigh-

Of course, the jealousy that made k rebuer d sclaam his contemporary models would have been mappropriate to those more removed in time and space. But the true explanation certainly lies deeper: we may approach it by considering the chronological sequence of the influences on Kirchner's se tiputifal ocuve. Extra European art was experienced first and most powerfully from March 1910 to the spring of 1911 and was the last significant influence on kirchner's work. Together with his appreciation of earlier Germian art, this remained the only effective influence until the mid twenties.

- 12. In his 1925 draft for the Grohmann monograph of 1926 (Grisebach, [1968] pp. 84—85), for example, Asteoner wrote in det all about his encounter with African and Palac carving, as well as with Indian temple paintings and sculptures. The same references are to be found to the Brücker brounds.
- 15 Cf Lotter Grisebach. 'Acrebuer un'i Cranach,' in E. L. Airebner, Aquarelle, Zeichnungen und Druckgraphik aus dem Besil...des Stadel Frankfurt um Main, exh. cat. Bonn-Bad Godesberg, 1980.
- 14 Frank Whifford, "furcinger and des Kunstorted," in Nationalgalerie, Berkin, 1979.

The development of works within the various media hirchner employed was not independent, there were. as previously stressed, intense interactions between them. The nudes in the painting Five Bathers at the Lake (1911, Brucke-Museum, Berlin, Gordon, 194) which reveals the first and most definitive formal in fluence of the Ajanta figures - were still painted in the white-pink incarnate that kirchner had used customarily for nudes in his paintings. In 1911, kirchner's sculpture, which had previously been only partially painted with black outlining the contours, began to show the use of overall yellow-ocher or yellow brown incornate as in the Moritzburg bathers.15 This yellow was heightened only by a dark color (black or dark brown) for hair, eyes, and mouth. From 1912 on we find this woodlike coloring in his paintings as well, particularly in close-up bathing scenes and in interors, for example, in the painting Striding into the Sea-(fig. 15, p. 129). Not only are the yellow mearnate and full "plastic" form of this painting's two swimmers surprising; their motion is definitely "wooden." They seem to be sculptures, striding into the sea! We observe the same phenomenon in the painting Brown Nude at the Handow (Westfalisches Landesumseum für Kunst und Kulturgeschichte, Munster: Gordon, 200, Nationalgalerie, Berlin, 140). It almost seems as if not the real Erna, but Kirchner's sculptural mearnation of her, is standing by the window in this work. In fact, the image here represents a careful preparation for the Head of a Homan, Head of Erna Nirchner confirmed these observations when on June 6, 1913, he wrote from Fehrmarn to Gustay Schieffer:

To be sure, I don't notice exactly how I'm changing, but what is new comes from the interactions between painting and drawing, between the sculp tural working with wood and the material demands of graphic act.

On December 18, 1914, he wrote from Berlin-

The sculptures have also been completed. This working in conjunction with the plastic is of more and more value to me; it facilitates the translation of spatial concepts onto the two-dimensional plane, just as it helped me earlier in finding the large closed form.

Of interest here also are the prices which kirchner asked for his scuiptures at exhibition, which were equal to those for his troost expensive paintings and even higher than those of his paintings during the last years of the War. These indicate the value which kirchner himself assigned to his plastic work

Airchner's amazingly open admission of the extra-European influences on his oeuvre is explained by his understanding of their overwhelming importance.

15. From 1909 to 1911, the Brucke artists spent summers at the Moritzburg takes, and many renditions of this locate appear in their works of these years. — Ed.

The earther influences did not extend beyond short lived effects in isolated areas and individual cases. The plastic art of Cameroon and the frescoes of Ajanta, however, remained a continual inspiration for him and his sculpture. In this context, the valences of kirchner's individual expressive techniques must be reevaluated. Our knowledge of kirchner's art will be expanded and transformed by the monograph with ocuvre catalogue now being prepared for his sculpture. With its publication, it will no longer be possible to ignore this work, which, along with that of Expressionism as a whole, has been previously over looked all too frequently — W. H.

Karl knappe received his training as a sculptor at the Munich kunstgewerbe-schule and kunstaka-demie. He became familiar with architectural sculpture at an early date; in 1910, he worked on the monumental sculptures

designed by his contemporary Georg Wrba for the Dresden railway station, In 1911, he received the Rome Prize, which enabled bini to study the sculptures of Michelangelo. From 1912 to 1918, he created numerous works – crafts as well as artworks – in collaboration with various architects, he was encouraged in this direction by his friendship with the sculptor Ludwig Gies (see pp. 37–40).

Knappe's work did not exhibit obvious Expressionist traits until the early 1920s, when he began to execute expressively deformed works in wood. He subordinated actistic ideas to the "laws" governing the material. itself which, in his view, already contained all of its sculptural possibilities. Knappe developed his own technique of working, hollowing out a tree trunk or a stone and leaving the material close to its raw state (cf. Great Harvest, 1935, wood, Staatsgalerie Stuttgart, and Irce of Stone, 1929, created for a housing development in Manich Schwaburg). The characteristics of the material dictated the results, which ranged from baroque and exuberant to strictly bound forms. In his hmestone reliefs for the Munich memorial to the dead of World War E (1922~26), the sculptor shallowly carved marching soldiers into the stone. The figures are rhythunic in their repetition, concave and convey forms speak with equal clarity, knappe employed this technique of the "negative cut" several times in varying materials (cf. Homan Playing the Violin, with Deci and Bee, 1926, brick, location unknown). This form, which suggests the cincipatic motion of the buturists, had been developed by sculptors such as Gres, particularly for the modeling of plaques.

One of the most original works executed in this somewhat Cubist technique is knappe's portrait of the well-known Berlin painter Max Laebermann (cat. no. (3). This work is illustrative of knappe's special attention to positive and negative values and to the quality of the material - in this case, the brouze patina. The lengthy neck is intercepted by the condensed form of the skull and is thus transformed into an image of psychic energy, knappe intensified the ambiguity of Liehermann's features, recalling the sculptural character studies of the eighteenth-century artist Franz Naver Messerschmidt and of Honoré Dammier. The artist was particularly concerned with implying contrusts in the character of the person portrayed, for example, those of distance and spiritual alertness, ca mness and keen intellect

knappe continued working in Expressionist forms, despite the dominance of neoclassicism in the late twenties. This fact contributed to his being fired in 1935 by the Nazis from his teaching position at the

Technische Hochschule in Munich His studio with most of his early works was destroyed in 1944, but after 1945 the rebuilding of West Germany brought han numerous commissions for windows, mosaics, and sculptures. – J. H. v. W

Georg Kolbe emjoyed critical and financial success throughout a long and productive career, during which he was briefly linked with German Expressionism. His unital training in Dresden, Munich and at the Academic

Jahan in Paris was devoted to drawing and painting. In 1898, white pursuing an independent plan of study in Rome, Kolbe stopped painting and, under the titelage of Louis Trialton and August Gaul, learned the fundamentals of sculpture. By 1903 be had established permanent residency in Berlin, but that city was to serve him only as a home base. During the next two years he traveled to Egypt, England, France, Greece, Italy, Russia, and Spain. In 1905, he was awarded the Villa Romana Prize and spent the year in Florence.

an 1909, Nother visited Rodin's Paris studio, and a great deal of critical attention has since been devoted to determining the degree and nature of Kolbe's fies to the French sculptor Stylistic affinities with Rodin's work seem particularly pronounced in Kolbe's sculpture prior to 1920, his preoccupation with the nude being an obvious common characteristic, Maria von Tiesenhausen, the artist's granddaughter and former director of the Georg Kolbe Mitseum in Berlin, has indicated, however, that "Kolbe and Rodin never talked with one another even when Kolbe visited Rodin's studio in 1909."

Nothe's early years of travel seem to have provided a more significant basis for his effectic and complex blending of styles and sources. His vomits and maidens are embodiments of a gentle, contemptative aesiliem that reveals more of the vigor apparent in Bodin's work. The softly mottled treatment of Kolbe's bronzes results in a diffused flickering of light, unlike the high drains of Rodin's extremely personal and heavily worked surfaces. Through the chythogical arrangement of limbs and body, kolbe investigated mass, contour, and proportion, concerns which main tained primacy over the exploration of an impressionist exterior.

Aristide Manifol must also be considered in an commation of kolbe's aesthetic. Formal simplification became increasingly important to kolbe, and he consistently represented the female body in firm, rounded forms. The vaguely sensual, passive, monumental woman stands above all as an expression of zrace and architectonic clarity. Notbe looked to Maillot and to Adelf von Hildebrand for a realfirmation of the traditional emphasis on formal structure and proportion, while at the same time, he was influenced by the very different spirit he found in the work of Rodin, who by grasps life with a genial hand and refused impres

USee Maria von Tiesenhausen's foreword to Andrew Dickson White Museum of Art. Cornell University Bhaca, 1972. Impaginated sum 2 Committed to an aesthetic that studied, assimilated, and synthesized the art of the past, kolbe wrote. "By attaching threads to the most noble epochs of sculpture, they [today's sculptors] serve their art with keen understanding. In this manner sculpture conquers the expression of contemporary life,"

In the early twenties, Noibe's regard for the sculpture of antiquity found expression in such works as the issumption of the Blessed Lugiu (1921, bronze). The frontality, extreme stylization, and monumentality of these sculptures recall both Egyptian and Archaic Greek art

A lifelong association with Karl Schmidt-Bottloff began in 1919, when the two artists met at Lehmbruck's filmeral. At this juncture, an important shift took place in Kolbe's art, which during the next few years was alled with German Expressionism. His passive monumentality gave way to the expression of emotion through gesture, as seep most vividly here in Inger (cat. no. 75). He altered anatomical proportions to conform to a surge of emotion represented not () the facial expression, but in the gesture that ares and ricochets through the entire body. The limbs and the drapery covering them were reduced to a severe augularity. The exaggerated gesture of the arms, vehicmently extending upward, is complemented by the connterthrust of the trunk. The face of this figure remains strangely impassive, as if the gestiere alone were the subject of the work. This piece appears to contradict the interpretation of Alfred Bark who included Kolbe in the important exhibition Modern German Painting and Sculpture at The Miseum of Modern Art, New York, in 1931, Barr emphasized Kolbe's classical bronzes and perceived the at list as a "muld and gracious spirit. " Whose work did not earry the emotional impact of that produced by some of his peers: "Noibe carely informs his figures with strong emotion. Even when their postures are violent they seem posed rather than convincing expressions of pain or joy" !

tager is especially noteworthy for its use of wood as a material. Notbe may well have been inspired by Schmidt Rotthalf and other Brucke artists to utilize this material, with which he had had very little prior experience. His early work was almost exclusively modeled in clay and then cast in either plaster or bronze. There is no bronze version of Anger in contrast to the Brücke commitment to carving directly in wood, however, kolbe made a small plaster model of his sculpture and then commissioned another artist, Gobes, to produce the large version in wood from this mag tette.³

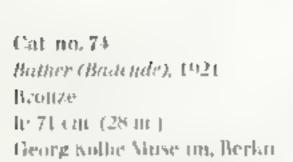

- 2. Quoted from Notbe's essay, "Ausdrucks-plasbk," 1912, to Heller, 1974, p. 52
- 3. Ibid., p. 55.
- 4. Museum of Modern Art, New York, 1951, p. 41.2
- 5. This information was provided in correspondence of Corober 1982 with Dr. Ursel Berger, Director, Georg Kolbe Museum, Berlin.

Like Anger Kolbe's Bather (cat. no. 74) is an expression of pure rhythmic gesture. The figure is partially enveloped by heavy drapery which defines the conour of the body Nun l/Dancer, included in this exhibition in both bronze (cat. no. 79) and wood (cat. no. 78) versions, goes even further in the expressive use of drapery. The figure is completely sheathed, the folds and patterns of the cloth accentuate and articulate the body's gentle curve. Based on two drawings also in the exhibition, and both entitled Dance Study (cat. nos. 76 and 77), the subject of these sculptures would seem to be a dancer, rather than a nun as has been previously suggested.

throughout his life, yet be believed that drawing and sculpture were radically different pursuits and that the sculptor must be capable of full expression without depending on two-dimensional studies. In 1924, he wrote: "To the sculptor, drawing is a special language a language which can live next to his work — but which has nothing in common with the nature of his sculptural methods of expression."

Kolle's interest in emotional expression through angular stylization soon abated; the works from the tate twenties reveal his return to a more realistic conception of the human form. By the 1930s he was portraying grandiose, idealized visions of the Nordic tace in heroic poses. These young, muscular men and women provoked the following description by Budoli Binding in 1955. ". . A keen ambitions self-conscious race, asserting its own youth and contemporaneity and emblazining this on its banners. Such a race is demanded by the world we are entering. Georg. Kolhe's world?" Currously, Hitler had wanted to include Nothe in the list of degenerate artists, and it was Goebbels who actively campaigned to maintain the artist's standing.8 Nothe continued his work virtually undisturbed during the Third Reich. Although he never actually joined the Nazi party, he was consistently included in Sazi approved exhibitions of the Inte thirties and forties. His ambivalence, however, can be felt in his remarks on the Nazi destruction of Lehmbruck's Kneeling One, "The wonderful sculpture...they destroyed stupid worriors and monuments of princes enjoy the approval of the bour geois" S.P.

kathe Kollwitz is well
known for her powerful
depictions of the human
condition in masterful
graphic form. She is less
known for her sculpture,
an octave of approximately twenty five pieces
created throughout her

career with the same power and many of the same themes and compositions which characterize her graphic work

Kollwitz probably learned the fundamentals of sculpture at the Academie Juhan in Paris, where she studied in 1904. As an established artist new to this medium, she admired the work of Vleumer, and while in Paris actively sought to broaden her knowledge of contemporary work with visits to the studios of Rodin and Hoetger, Rodin's sculpture greatly impressed her; his influence can be seen in her early work, particularly in Lovers I (1911, plaster; destroyed) and Mother with Child on Her Shoulder (undated, bronze).

In 1910—II, after she had returned to Germany folfowing her studies in Paris and also in Italy, kollwitz devoted herself almost evelusively to sculpture because, as she explained, her artistic work was in need of "rejuvenation." She had already attained great popular success with her graphic cycles; sculpture presented a challenge beyond the secure base of graphic media.

Notivitz's intense early work in sculpture (she created at lenst eight pieces from 1911 to 1917) marked the beginning of a difficult relationship with plastic tech niques. Throughout her diary entries and letters to friends there are references to being "afraid of sculpture," yet at other times she reported that it was bringing her success: "I should have more confidence in myself, considering my ability even in sculpture." Toward the end of her hie she took special pleasure in creating thematically powerful sculptures whose small size reflected her failing strength, modest income, and the severe restraints imposed on her career by the Nazis.

Apart from her mutal studies in Paris. Kollwitz received no additional formal training, declining opportunities for professional criticism so as to avoid becoming academic, Most of her pieces were modeled in clay or plastic — only a few were cast in bronze. Some, such as the monomental *Va mornal: The Parents* , 1924—52; stone copies made in 1954 instalted in St. Alban's Church, Cologne [fig. 18, p. 20]), were clustled in stone by other sculptors after Kollwitz's plaster.

1 See diary entry of April 3d, 19. 1 (i) Nolawitz, 1935, p. 104

2 Diary entry of September 1913, quoted in Museum Villa Stuck Munich, Käthe Kottwitz, Zeichnung. Gruplick. Plastik exh. cat., 1977.

5 Cf. letter of May 6, 1957, to Hanna Lochuberg in Nathe & Hwitz *Briefe der Freundschuft und Beweinungen*, Munich Just, 1966, p. models. Kolivitz sometimes worked on several sculptitres simultaneously. Based on extant drawings, it seems that she made numerous preparatory sketches for some but not all of her sculptures.

From 1917 to 1920, Kollwitz came under the direct artistic influence of Barlach, whom she greatly admired and with whom she shared an artistic focus on the human predicament. Seeing Barlach's wood cuts greatly affected her graphic and sculptural style. For both artists, the block form was the hasis from which sculptural figures emerged. Protriding limbs were rare; in fact, much of the figure was often copcealed by folds of heavy drapery. One side of the sculpture was usually treated as the main view, with emphasis being placed on frontality. Figures often coalesced until they were judistruguishable from one another. This style demanded careful attention on the part of the viewer in order to determine the meaning of the figure's placement. However, kollwitz was not concerned with formal aspects per se. When she visited Milly Steger's studio, she declared that for Steger there existed "only formal problems"; she was "setting out from quite another end than L^{eg} Steger **s** extreme Expressionism astonished Kollwitz, perhaps because the strength of becown sculpture lay in the Expressionistic themes employed, rather than inexaggeration, abbreviation, and distortion of form.

hathe kollwitz created her sculptural representations entirely from personal perceptions, which often necessitated a transformation of the accepted compositional mode. This approach becomes evident when one compares her two Lovers. The first version, of 1911, known today only from photographs, appears to derive from Rodin's Aiss (c. 1880-82, bronze), The second version, Lovers II of 1915 (cat. nos. 80 and 81), is a distinct departure from the standard depiction of an erstatic, passionate pair of muture lovers. Instead, Kollwitz's couple is voong and serious, exhibiting an awkward, slightly restrained sensually. Her impressively individual treatment was well received by the jory of the Berlin Freie Sezession when it was exhibited in 1916, but it was not popular with the public at large. This initial coomess may have been due to the difficulty found in reading the sculpture as a pair of byers, or eyen as a man and woman, it has also been called a mother and clubb. Kollwitz nevertheless continued to maintain that "art for the average on tooker does not need to be shallow ">

In a sculpture of 1957 - 58, Totecr of Mothers (cat. no. 86), the subject is more easily readable, and the meaning of the composition can be clearly understood as mothers protecting their children from a threatening presence or force. Kolbvitz first conceived of this sculpture in the-round much earlier, when she began work in 1922 on the graphic cycle Har (1922 - 25, series of seven woodcuts); there a woodcut of the identical subject was included (cat. no. 82). When in 1958 the sculpture was finally realized, the Nazis

11 ((

⁴ hollwitz 196"

^{5.} Rauhut, 1966, p. 250.

removed it from an exh bition at the kiosterstrasse Studio, Berlin, on the grounds that "in the Third Reich, mothers have no need to defend their children. The state does that for them "6

During this period, Kollwitz was also working on another group, the Picta (cal. no. 85). In her prelimnary work on this piece kollwitz had intended to depict an old person, but "it turned out to be something like a Pietà, a mother sitting with her dead son lying in her lap, between her knees. It is no longer grief, but meditation."7 Once the Pieta figures were realized. she intended to transform the Caristian theme into a secular, more amversal one, for "... nune is not religious.... My mother is musing upon her son's failure to be accepted by men. She is an old, lonely, darkly brooding woman." The piece is an unimistakably personal work, certainly a reflection of the artist's maternal and humaintarian compassion and perhaps, as in other works, an expression of her deep feelings about the Joss of her own son in World War I

While the woman of the *Pietā* is not specifically terself, Kollwitz's likeness does appear to several other sculptures such as *Memoraal: The Parents (Mother)* (fig. 18, p. 20), *The Lamentation* (cat. no. 87), and a self-portrait first (cat. no. 85) on which she worked from 1926 to 1936. Kollwitz called it a "face mask," a literal image of herself. The facial expression is calm, weary, and sombet, very much like the self portrait drawings of this period (see cat. no. 84). In its larger-than-life size and detailed mode ling, the *Self Portrait* is a symbol of kellwitz's simple, carnest, and direct humanny. — K.B.

Lehmbruck

Wilhelm Lehmlands

died 1919 Berlio

Born 1881 Duisburg Meiderich

Withelm Lefinbrick was born the son of a laborer During his relatively short career from 1901 to 1919 he explored the entire spectrum of modern sculpture. In 1901, he studied under Carl Janssen at the kunstakadenne Düssel-

dorf, modeling figures (Bathing Homan, fig. 2, p. 147), portrait busts, and reliefs. His eclectic, searching ocuvre combined social maturalism, literary symbol tsin, the influences of Rodin and Mennier, and the Academic themes of the German Empire. Within these works were hints of the new modes of creativity that came to the fore in 1909-10, when Hoetger. Constantin Branciisi, and Barlach began to react against the heritage of the nineteenth century. As-Lehinbruck's contemporaries and critics, such as Theodor Daubler, Paul Westherm, and Carl Finstein. soon came to recognize, his works as early as 1902 displayed an intense concentration on the animated individual figure and on the depiction of space. In works such as Anna K. (1906), Mother and Child (1907) bronze), and Small Standing Homan (1908, bronze), however, Maillol's influence can be seen. This is because Lehmbruck's works of around 1909 denioustrated a short-lived synthesis of the Econoliscolufor a quietness of form with Hans von Marce's Tech nique, thus combining Mediterranean sensuality with tae axial dominance of Northern nudes, in October 1910, at the eighth Salon d'Automne exhibition, Lehmbruck exhibited his Tall Standing Homan (1910) cast cement) next to Madlot's Pomona (c. 1910, plaster).

Yet most Lehmbruck scholars, including the authors of exhibition catalogues since 1949, consider this significant early ocurry only to have become tridy interesting around 1914, when Lehmbruck was able to move to Paris. At this point, he abripply turned away from Rodin and broke with his previous style. Anceling Homan (fig. 13, p. 19) was described by Daubler as a preface to Expressionist sculpture. Lehndruck distinguished himself as an Expressionist by lengthen ing the human figure and emphasizing its significance. as the bearer of emotions, ethical attitudes, and ideas In 1913, he reached an artistic high point in the creation of Rising Youth (fig. 5, p. 147), a sculptural prototype of the Expressionist adolescent. A drawing in the Startsgalerie Stiftgart confirms the sculpture's Nietzschean origins, here a youth, next to a free, gevtores as if illustrating the dialogue in Also sprach

Jahrhunderts, 3rd ed., Berlin Propysien Verlag, 1931, pp. 2231

2 Daubler, 1957, pp. cit., p. 162.

Zarathustra = "You Boom am Berge" ("By the Moun tan Tree")

Lehmbruck's fame, prior to World War I, was established by his participation in many important exhibitions. In April of 1912, the exhibition II dhetm. Lehmbruck-Egon Semele was organized by Nar-Ernst Osthaus at the Folkwang Museum in Hagen, dem onstrating the kinship between the two artists. The significant Moderne Kunst exhibition at the same museum in June-July 1912 included Lehmbruck's watercolors and oil studies as well as sculptures, uidicating that he regarded himself as both a two- and three-dimensional artist * From May to September of 1912, the Westdeutscher Soraderbund sponsored an international exhibition, in which Van Gogh, Cezanne, Gaugniu, Munch, and Picasso were well represented Fourteen sculptures by George Minne were also on view, as well as sculptures by Richard Engelmann, Barlach, and Hans Haller Lebinbrick exhibited two important works: fall Standing Homan and Auceling Homan. He also sent works to the 1912 Sonderbund exhibition, the 1915 Armory Shore in New York, Chicago, and Boston, and the Herkbund exhibition of 1914 in Cologue,5 In the same year, be had a one-man exhibillion at the Galerre Levesque in Paris.

Thus the years before World War I saw Lembruck as the great hope of the new sculpture. This art was in no sense given over to mere formal experimentation with concave and convex surfaces, but rather itself the human figure to convey the *ideas* of Expressionism. In 1920, the art historian With Wolfradt emphasized that the subject of Expressionist sculpture was the human body. The abandonment of the human figure as a carrier of symbols, promoted by Bruncusi between 1908 and 1913, led to a crisis in European plastic art around 1912, a crisis which must be recognized as that of the human figure versus abstraction — "inner sound" (Kandinsky and Mare) versus objectivity and the depiction of man (Beckmann, Lehinbruck, Schiele)."

While this crisis was occurring in painting and

sculpture, the First World War broke out in the summer of 1914, and Lehmbruck had to leave Paris. He became a medic, deeply hornfied by the slaughtering of nations, he was able to move to Zurich at the end of 1916. But even before that, he began to create male rather than female figures. Their style represents Lehmbruck's achievement: the tight, lectonic human figure symbolizes the period's intense strife. I tolent Man (cat. no. 89), created in 1914–15 in Berlin, was Lehmbruck's first sculptural reaction to the War II would be more aptly called Man Struck.

During this period Lehmbruck expanded his contacts with artists and writers such as Theodor Daubler, Ludwig Rubiner, Max Liebermann, Carl Emstein, Fritz yon Unruly, and others. After the dissolution of the Ber-Im Secossion in 1943-44 and the establishment of the new Frese Sezession, Lehnibruck joined the latter, thus making the acquaintance of the painters Waldemar Rosler and Beckmann. The three served together on the executive commuttee and jury of the Freie Sezession, Thus Beckmann's and Lehmbruck's acquaintance was firmly established, the latter's large. figures created in 1915-17, such as The Fallen Man-(cat. no. 91) and Scated Youth (cat. no. 92), must have had an effect on Beckn ann. Most of the work on The Fallen Man was done in Berliu in 1915, and it was exhibited for the first lime in February of the following year at the second exhibition of the Freie Sezession. In contrast to numerous war memorials of those years. thus symbolic figure is made; it is a symbol for all the war dead of Europe. In its bridgetike tectories it constitutes, along with Scated Jouth, the pinnacle of Lehinbruck's art and a central work of twentieth century sculpture. Scaled Youth originated in Zurich and in September of 1916 was exhibited in the Kunsthalle Basel with the title B aved Eigure and later in Berlin at the fourth Freie Secession exhibition with the title The Friends Whereas Fallen Man of 1915 primarily symbodizes the fate of European youth in World War I, Seated louth expresses universal mourning for those who dre in war.

Although his art had achieved great importance, in March of 1919 Lehmbritck committed stricide. His works of the period prior to his death include portraits of such curtural figures as Daubler (1916–17, cravon Lehmbritck Estate), von Unruh (1917, cast stone), and Clara Burger (1917–18, cast stone), as well as drawings of Rubiner (fig. 5, p. 149), and Leonhard Frank. A few sculptures which reduced the human figure but did not formally abandon it also were developed: Head of a Thinker with Hand (cat. no. 96) and the an mated Female Torso (cat. no. 95). The latter work reflects Lehmbritck's love for Viennese actress

8 National Gallery of Art, 1972, no. 48, Schubert, 1981, pp 230ff We cannot discuss fully here the different coloration of the terracotta, stone, and bronze versions; of color pl. in We helin-Lehmbruck Museum der Stadt Ootsburg, 1981, no

52, and in Stadtische Museen Heilbronn, 1981

Head of a Thinker with Hand is both a compressed continuation of the 1913 Rising Youth, with the elongated head representing the dwelling place of the spirit, and a self-portrait of Lehmbruck at the end of World War I, in both material and spiritual trouble. Undoubtedly Von Laruh had this work in mind when he write in a 1919 letter to the writer Kasimir Edschmid

In the final analysis a man presents hunself to us, whose mind comprises all of the feelings of conscious humanity, just as the dome of a cathedral contains the prayers of the faithful. A type that the great German sculptor Lehnibruck, who recently passed away, tried to create intimately and constantly ¹⁰

Gerhard Marcks

died 1981 Burckrobl Elfe.

Born 1889 B

The sculptural and graphic works of Gerhard Marcks provide proof that Expressionist form was also deeply indebted to Archaic Greek models. Marcks, who decided to become a sculptor at an early age, rejected the common Aca-

demic approach to sculpture and in 1907 became a kind of apprentice to August Gaul, a sculptor famous for his depictions of animals. The following year, Mareks began working in the studio of the sculptor Richard Scheibe, who served as his "teacher, Maecenas, enemy, model, public, and tuvedo lender."¹ The two worked together creating sculptural rehefs for an exhibition half to house machinery which was designed by Walter Gropius for the *Herkbund* exhibition of 1914

Marcks spent a compulsory year in the army in 1912, and the First World War saw him in uniform once again. Following the War, in 1919, Gropius asked Mareks to join the faculty of the newly founded Bauhaus in Weiman Marcks taught there until 1925, developing a close friendship with painter and graphic artist Lyonel Ferninger, On one occasion, Ferninger, wrote to Marcks; "You are a form giver far beyond the mere representation of nature, translating nature instead into its pure essentials in order to reveal its deep a haracter** It was also benunger whom Marcks credited with having inspired him to begin his woodcuts which, strongly abbreviated in form, are typically Expressionist in their stark combination of black and white. As the head of the ceramics department at the Barrhans, Mareks used the material at hand to create Small Head (cal. no. 97) and other small ceramic scriptures. These works are Expressionist in their decreased emphasis on individual features in favor of more "universal" representation. Mareks created a large mumber of drawings and small models of this type of head, indicating the seriousness of his search. for a new form.

When the Baubaus moved to Dessau in 1925, adopting the motto "Art and Technology — a New Luity," Marrks fell that he no longer belonged there and accepted a teaching position at the Kunstgewerbeschule Burg Giebichenstein neur Halle. While at Giebichen stein, he concentrated on his sculpture. This time for treative work became burited, however, when in 1950 he took over as interim director after the resignation of the school's founder, the highly respected architect Paul Thiersch. In 1928. Marcks had traveled to Greece where he discovered Archaic sculptural forms, which

F. Letter form, Gerhard Marcks in Berlin to his brother Her Fert, dated Air (1815), 1910, and published in Germanisches Natur Amiseum, Nuremberg, 1979, p. 24

2 Letter from Lyenel Feminger in New York to Gerhard Viareks, dated March 9, 1941, and published in Kölmischer Kunstverein, Gerhard Marchs Herke der Kölmer Jahre, 1970 bis 1969, exh. cat., 1969 be regarded as an affirmation of his commitment to the human figure. For Alareks, the characters of Greek mythology — Orpheus and Tantahis, Prometheus and Odysseus, Oedipus and Ariadne — provided true and vital models of human experience. In regard to his 1957 bronze sculpture of *Orpheus*, Mareks stated: "I wanted to express that Orpheus was an ordering principle ([like] J. S. Bach) in contrast to eastasy. He was turn apart by the machads, spirits of trance, passion, and disorder, for me, he was a statement of faith." The tast figure Mareks completed depicted Prometheus being set upon by the eagle (plaster, 1980).

The Nazis fired Marcks from his position at Grebichenstein in 1953 and included his work in the Entartete Kunst exhibition of 1957. He then inoved to Mecklenburg, but shortly thereafter returned to Berlin. Forbidden to exhibit, he resumed his work in graphies, a medium he had neglected after moving to Grebichenstein. During the Second World War, he lost his house, studio, and many of ais works in one of the bombings of Berlin, and he returned once again to Mecklenburg.

Immediately following the War, the Landeskinistschule in Hamburg appointed Marcks a professor. It was here that he received the important commission to complete the cycle of eight figures for the west facade of St. Katharmenkirche in Lübeck (see fig. 35, p. 27). Ernst Barlach had already executed three of these figures (1930 - 52, see his Beggar, cat. no. 22) and suggested that Mareks complete the cycle. Today the eight ligures stand in their niches like different tones in a single melody Barlach and Marcks shared the same credo. They were convinced that the sculptor's task is to render visible man's vulnerability and strength, his misery and joy. While formal differences in the figures reflect the artists' tinique personalities, this group of sculptures as a whole is remarkable for its success in blending a modern treatment of the human image with the church's Gothic brick architecture.

Prometheus Bound II of 1948 (cal. no. 98) was the culmination of Marcks' attempt to solve the problem. of creating a truly expressive figure in a static position. Its precedents are to be found in graphic studies (ca., nos. 99 and 100) as well as the earlier sculptures. Seated Boy and Lantalus (both 1944, bronze). Chronologically the latest Expressionist sculpture in this exhibition, Prometheus Bound II is a mature work that joins Expressionist elements with Moreks' inherent understanding of the Greek genius. Promether s, punished for bringing fire stolen from Olympus to man, sits in bitter defeat and grief. His fettered hands rest on one knee, his head on the other. His spirit bas deserted him and with it the will to protest or rebelagainst his pumshment. Marcks created this figt re as a symbol of the sufferings endured in the Second World Wag It is reminiscent of Lehmbruck's Scated Fouth (eat, no. 92), but it does not convey the same

 Letter from Gerhard Marcks in Cologne to Peter Gneither dated August 2, 1971 sense of the defeated and suffering revolutionary.
Thus, in sensibility, it is perhaps even more closely related to Lehmbruck's Fallen Man (cat. no. 91)

In 1949, Marcks executed a monument to the people of Cologne who had died diffing the Second World War, and in the same year he received the Goethe-Medaille (Goethe Medal) from the city of Frankfurt in recognition of his achievements. In 1950, he moved permanently to Cologne, where he completed a commissioned management dedicated to the civilians. who had died in the bombing raids on Hamburg. In-1952, he was made a knight of the Orden Pour le-Merite ai d was awarded the Stephan Lochner-Medaille from the city of Corogne, Commissions for the cities of Frankfurt, Aachen, Bremen, and others followed, frequently competing for time with works which Marcks wished to do for himself. Woodcuts, lithographs, and in the later years landscape pastels. became more frequent in his ocuvre, along with a in uniter of animal sculptures. In an interview given in-1978, Marcks said: "...one gathers experiences and only becomes human by correctly using these experiences, bor this, later life is the best time. Then one can think; what is really important 20% His works have provided us with his own answer - PW G

George Minne's works
from about 1885 until 1909
are outstanding examples
of the close connections
which existed between
three ostensibly very different stylistic directions
Through his friendship
with the great Belgian po-

ets and writers Maurice Maeterlinek, Gregoire le Roy, and Emile Verbaeren, Minne was drawn early to a Symbolist aesthetic; at the firm of the century and the height of his career, he lived and worked amid the resigning spirit of Art Nouveau. It was George Minne's special gift to combine Symbolist and Art Nouveau elements with forms and concepts which are clearly forerunners of Expressionism.

In 1882, Minne entered the Koninklijke Academie voor Schone Konsten in Ghent as a student of architecture, his father's profession, and studied there until 1884 Contrary to his family's wishes, he worked on his own from 1885 to 1889. His early paintings and sculpbite show an Academic orientation in their use of stan-Jaed historical subjects and classical forms. An important or akthrough for Minne came in 1886, when Macterityck and Le Boy returned from a trip to Paris, where they had met the French Symbolists and established a strong friendship with Villiers de l'Isle-Adam and his circle. At the Belgians' request, Virine pro-Juced a number of drawings and woodcuts as illustrations for Le Roy's Symbolist poetry and Maeterlinck's plays. He became a member of the important Belgian. Symbolist art group Les Vingt (The Twenty) with which he exhibited beginning in 1890. This group had been founded in Brussels in 1884 by Octave Maus, a lawver, art entie, and editor of the influential *ficeue de* PArt Moderne (Modern Art Review). Les Vingt's more famous members included Fernand Khnopff, James Ensor, Theo van Bysselbi rghe, and Henry van de **Velde**

Mune was deeply committed to the Symbolist credo, which held the inner world of the soul to be of primary importance. Problems addressed by the Replists and Impressionists were those of the visible, external world, and as such were considered ununportant when compared with the Symbolist aim of comprehending underlying and universal traths. Minne thew on the art of the Pre-Raphachies, as well is Gothic and Northern Renaissance traditions. He was also impressed with the work of Rodin and in 1890 traveled to Paris to need him. In 1898, Minne settled permanently in Laethem-Saint Martin, a small fown near Ghent which gradually developed into an artists' colons.

Minne is best known as a sculptor, and it is in his three-dimensional works that the presaging of Expressionism is most visible. The Symbolist intention and Expressionistic distortions of The Prayer (cat. no. 101) not only exemplify Minne's capacity for syndesis, but also effectively counter the sweetness which is generally associated with late inneteenth-

century treatments of religious subjects. The min's cowl covers her forehead close to the brow, and the roughly worked garment appears to deny that she has shoulders; thus the bands and the wrinkled, quiet face are dominant. Significantly, Minne carved this piece in wood aware that the roughness would enhance and strengthen the invsterious expression of the face. Is it greef, contemplation, or the apprehension of a vision which Minne has depicted? This ambiguity is characteristic of the Symbolist approach.

Minne's renown arose primarily from one specific monf – the kneeling boy First established in 1896 with Small kneeling Figure, this image preoccupied the art ist for many years. It was repeated in The Small Relie-Carrier (1907, marble, Koutnkhijk Museum voor Schone Kunsten, Antwerp) and again in Kneeling Fig. are of 1898 (cat. oo. 102), reaching its commutation in The Fountain of Kneeling Youths (fig. 1, p. 157), 'This latter work was commissioned by Karl Ernst Osthaus, the founder of the Folkwang Museum in Hagen, who already owned a number of Minne's works. When Heary van de Velde designed the new Folkwang Museum building, he suggested that a work by Minne should stand in the circular entrance hall under the colore I glass dome. The sculptor made a number of sketches and models until he arrived at the composition of five identical boys kneeling on the unadorned rim of a circular basin. Their bodies, whose elegance echoes Italian Mannerist sculpture of the late sixteenth century, are held in precarious balance, since each boy leans slightly backward while his head is tilted forward and downward. The complexity of this position is denied by the smoothness of the marble's whote surface, which achieves near-abstraction, Calne engui, narcissism, inner poin...all of these can be rend into the senipture. Art historian Julius Meier-Graefe wrote that the repeated figure of the boy bears a "paroxysm of pain transcending physical affliction," indicating his fine understanding of the contradictions expressed by this form. The seeming awkwardness of the attenuated bodies gives way to a strange and moving power when seen in their rhythmic circ.e. Each of the figures is completely self-occupied, the Flemish poet karel van de Wiestyne called the lountain. Aarcissus in Five-Fold Reflection. The image of Narcissus was important to both the Symbolists and practitioners of Art Neuveau ?

When either the single figures or the group of five was exhibited, the public was hardly prepared for this violation of the still dominant semiclassical style. They were less understanding of Minne's other adolescent figures from this same period, which display even more expressive gestures. This expressiveness continued to increase until 1911, when Minne turned to more realistic forms. He taught drawing at the Academy in Ghent from 1912 to 1914 and spent the

The Swiss painter Albert Muller first was exposed to the work of Frust Ludwig Airchner during the 1925 Airchner exhibition field at the Kunsthalle Basel. As a cesult of this encounter, specific changes occurred in Violler's own art. Prior

Numer, traveled to Italy, and worked briefly with the Swiss painter Cuno Amiet. He had not received any lorinal training as a sculptor, but had already generated a modest ocuvre of paintings on glass in addition to his canvases and graphics. Mulier's paintings from after the exhibition are characterized by stark coloration and compelling frontality. Further, along with his friend and fellow Basel artist Hermann Scherer, Muller began to carve wood sculptures.

Muller, Scherer, Paul Camenisch, and other young Swiss artists were inspired by Kirchner's work to form a group modeled after Die Brucke, which they called Bot Binn. Like Kirchner and the members of the Brücke, the Rot-Blau artists were commutted among other things to an aesthetic which would encompass carved objects intended for everyday use, as well as painting and sculpture. Of all the sculpture by members of this group, Müller's most clearly reflects. Kirchner's juffuence.

Muller was personally encouraged by kirchner, whom he visited at Franchkirch in 1924, to explore working in wood. Immediately after this visit, Muller carved his first sculpture, Standing Figure (cat. no. 105). Scherer was also encouraging. Responding to a photograph of Standing Figure that Muller had sent to him, Scherer wrote, "...the figure which you sent the photo of looks very good, it would be wonderful if very soon a small army of sculpture existed."

The works in Muller's modest sculptural ocuvre all bear the mark of his hand on their rough hewn wood surfaces. The artist seems to have been primarily interested in carving out his form as opposed to refining it. Moller painted his sculptures, but in a mainter. that was quite different from that of Scherer, whose plastic works are almost entirely covered with striking bues, In Grouching Homan (cat. no. 104, see Kirchner's own photograph, fig. 2, p. 159), for exam ple, Müller limited his application of color in order to emphasize certain aspects of physiognomy - e.g., hair, nipples, face - in much the same way that kirchuer. applied paint. This coloration gives the sculptures a starkness which in turn emphasizes their naivele and straightforwardness. Several of Muller's carvings were objects intended for personal use, for example, a decorative, carved bed which resembled in spirit the Kunsthandwerk of the Brucke artists

Malice's work of 1925 26 continued to resemble furchmer's in its attitude toward the sculptural surface, as well as in its composition. Both artists created sculptures which were not particularly complex in their organization or their basic structure, as most of them were fashioned from a single piece of wood. For both kirchner and Miller the basic form remained the tree trunk, and their sculptures were linked to this form. The notion shared by these artists that each sculptural detail, each cut made in the wood, should reflect a deliberate choice on the sculptor's part, as well as an expression of himself and his feelings, had been outlined in kirchner's article of 1925 "Concerning the Sculpture of E.L. Kirchner," written under his pseudonym (see pp. 45–46).

While all that remains of Muller's sculpture today is three finished and two unfinished sculptures and three bedframes made for his children, he most likely created many other sculptures which have not survived. Some were probably unfinished at the time of his death and were subsequently discarded or lost

In December of 1926, Multer died unexpectedly from an attack of typhus. He and Scherer were represented by kirchner in his bic-size sculptural portrait. *The Two Friends*, c. 1924—25 (figs. 5, p. 46, and 13, p. 128). — S.B.

Emil Nolde

d ed Seebell 1956

Barn 1876 No de (Sch eswirt).

Emil Nolde, born Emil Hansen, grew up on the land for removed from art It was thought that he would become a farmer like his father and forefathers. But the boy dreams of being an artist – he loved colors and painting

Finally his father realized that his son was of no use for work on the farm and sent him to apprentice at the Sauermann corving school and furniture factory in Flensburg. At the age of twenty Nolde was certified as a journeyman sculptor. One of his final projects in this capacity was a group of four melancholy owls for the desk of Theodor Storm, the country's most famous writer (see fig. 1, p. 164).

Nolde thus received training as an experi craftsman – a wood-corver, if not exactly a sculptor He was experienced in dealing with wood, knew its properties, and had learned to judge it in terms of its practical quality and usefulness. This was, however, something of an obstacle to his development as an artist. Thus, almost two decades passed before Nolde was able – in an act of spiritual and artistic liberation – to free himself from the restrictions of both his experience as a wood carver in furniture factories and of his employment from 1892 to 1897 as a drawing teacher in a St. Gall trade school. In 1898, he resigned his secure teaching position to become a painter. He traveled to Minich, Paris, Copenhagen, and Berha, finally setting in a remote fisherman's house on the island of Alsen.

About 1904-05, Nolde hesitantly emerged in public as an independent and original painter. When the young artists of the Brucke group saw some of his paintings in a Dresden exhibit, they were excited by his "storms of color" and in 1906 wrote him a letter praising his work and offering him membership in their group. Schmidt Bottluff came to Alsen for four months to work near Nolde, who, from the fall of 1906 to the end of 1907, participated as an active member in ail of the Brücke exhibits, proclamations, and activities. At this time, however, Nolde thought of himself only as a painter. When in 1906, after a long histor, he again picked up the carving knife, it was only to make printing blocks for woodcuts, following a suggestion from Schmidt Rottluff who procured the necessary tools for him. Nolde was aware that his Brücke friends hirchner and lieckel were sculpting in wood, as Heckel had sent him a photograph of his own sculpture at the end of 1906. On March 2, 1907, as if to encourage Nolde to do similar work, Heckel wrote to hun. "I have finished two new wood sculptures. The wood was very hard, but it was wonderful to come up

1. Letter from Schmidt Rottluff, as representative of the Brücke, to Emri Nolde, April 2, 1906, in the archive of the Notde Stiftung Seeball Reprinted in Emil Nolde, Jahre der Kampfe, Berlin, Rembrandt Verlag, 1954, pp. 90–91, and in idem, 1976, p. 146

against resistance and also to have to bring all one's physical strength into play."?

It was not until his journey of 1913–14 to the South Seas, New Goinea, the Palau Islands. Java, and Burma that Nolde yielded to temptation. During the long sea voyages he discovered the stove wood in the ships' gal leys. "I was looking for particularly beautiful kinds of wood, which were in ample supply and were used only as firewood." He picked up his pocketking and carved a number of small, narrow figures. Corresponding to the size of the firewood, they are only 25 centimeters (9% inches) high or even smaller. One of these works was lost on the trip, but twelve survive and are in the collection of the Nolde Stifting Seebuil. Five of them are included in this exhibition (cat. nos, 105, 106, 107, 108, and 109).

Are these pieces more than playful products of croftsmanship? Noide assessed them thusly: "I just tried to get a little beauty out of the lirewood?" He protested nonetheless when the figures were viewed as casual amusements. They originated effortlessly during the voyages "with their vegetative calm," and this differentiates them from the sculptures of Heekel, who spoke of the challenge of having "to bring all one's physical strength into play" Heckel's sculptures are heavier, denser, and larger than Nolde's; his Draped Homan (lig. 6, p. 95), for example, is over a meter high.5 Heckel could also claim to have retained the identity of his material; the peculiarities and structure of the wood are integral parts of the expression and content of his sculpture. The traces of workmanship. were not crased or smoothed over, but remain visible and expressive. But while Heckel, like Kirchner and Schmidt-Rottliff, used tools appropriate for working with tree trunks – hatchets, planes, and chisels – Nolde picked up light, narrow pieces which could be held in one hand and carved them only with his pocketknife. He traced the forms of growth, the flow of the grain, the branching, and the knots in a tender dislogue. In each piece of wood he "saw all kinds of little. figures which only needed to be released." The slender loung Homan with Raised Arms (cat. no. 109) grows like a mandrake out of the narrow firewood The posture and gesture of Prophet (cat. no. 107) were predetermined by the fork of a branch. The dual figures in Couple or Bonian with Child (both 1913-14, Nolde: Stiftung Seebulf) are bound together in an orgame unity, fused like the wood fibers

Noide loved collaborations with nature. He enjoyed seeing colors blossom "as if by chartee," taking form by themselves. He was pleased when rain and sand were driven by a storm onto a canvas or when the cry-

- 2 Postcard from Erich Heckel in Dresden to Emil Nolde in Jena March 2, 1907, in the archive of the Nolde-Stiftung Sc. bak

stalline patterns of frost become part of a picture's creation. In his etchings, he utilized the "arbitrary" structures formed in the corrosion process. Similarly, when producing his woodcuts, he liked to incorporate the grain and knots of the soft pine surface in his representation.

Most of his figures originated without preliminary drawings — "with the raw material in the band, netween the fingers," Two small statues based on female dancers Noide saw at a Javanese wedding (cat no. 106) and in Mandalay. Burma, are exceptions, to his memoirs he wrote that the fiery, wild twirling of these dances made him extremely excited. He captured them in several colored pencil drawings and carved two figures from his sketches. The dancers wear (ight gowns of a sluming bronze — the actual gar ments were of vellow sitk — and the eyes of the Burmese dancer are small rubies. Some of Noide's other wood sculptures are also lightly tinted.

In 1925, Notice created two brick sculptures, a man's bead and the smaller *Two Heads Man and Homan* (cat. no. 110). Their concisely simplified forms join with the peculiarly erumbly texture and deep red color of the unusual material. The complete agreement of form and material goes for beyond a craftsman's sense of doing justice to the material. The same holds true for Notice's work in embossed metal, for the jewelry of gold and simple stones, silver, tortoise shell, and work that he made for his wife, Ada, or for his ceramic works made in 1915 in a pottery in Fleisburg – plates

1. This is how Notice described "the works of primitive peoples" in a book about the cartistic expressions of primitive peoples' on which he worked in 1911-12 able book never got any further than the introduction). It is, however, an optimier pretation of his own erea aous with masks, female dancers, and animals, and colorful versions of reliefs of two dancing girls, reminiscent of the painting Candle Dancers of 1912 (Noide-Stiftung Seebull). His work in other materials, whether wood, stone, metal, or ceramics, cannot be divorced from his paintings. Thus, we frequently come across his carved wooden figures, just as we do the exotic sculptures, masks, and other objects from his own collection, in his paintings and watercolors. The small watercolor in this exhibit, Cyclamen and Stone Sculpture: Two Heads (cat. no. 111), is an example of this. – M.L.

The sculpture in this watered or is Iwo Heads Man and Homan (cat. no. 110)

Max Peclistem joined the Brücke artists – kirchner, Heckel, Schmidt Bottluff and Fritz Bleyl – in 1906 and left the group in 1912, one year before it dis banded. Although not a founder, during the years of his participation

Pechstern was the group's best known and most successful member, He was the first to receive recognition, honors, and significant commissions; he traveled widely and made the acquaintance of many other artists.

foday this situation seems almost to be reversed The work of Kirchner, Heckel, and Schmidt-Bottluff has been the subject of much scholarly investigation and a casaly accessible in museum collections. Yet there is still no comprehensive monograph on Pech stein, and his entire graphic ocuvre has not been pullished? Moreover, the presentation? and concentration of his widely scattered artistic legacy in public collections,* necessary for an objective evaluation of his actuevements, as still incomplete. The reasons for this relative neglect are many. The rediscovery and scholarly investigation of German Expressionism began in the late 1950s, and by this time, unlike Schmidt-Rotthiff and Heckel, Peclistein was dead. Consequently the chief documentary source for a study of his work, the artist himself, was no longer. available.5 In addition, even during Pechstein's bletime there was a wide difference of opinion in evaluations of his work, and this has most probably influ enced later judgments." Finally, a vast amount of his work was lost or destroyed in the War or as a result of political persecution.

- 1. For the most comprehensive documents tion available, sec. Reinhardt, 1977 78, pp. 2040.*
- 2, 46rd, p. 155 *
- 5. The last major exhibition (including a ratalogue) of Fechstein's paintings was sponsored in 1982, on the occasion of his handredth hirthday, by the Platzgaterie, Kaiserslauterit.
- 4. Even in the Bracke-Museum, Berlin, which was established through Schundt Rottluff's endowment and augmented by Reckef's estate, Pechstein is not yet well represented.
- 5. A number of years ago the artist's two sons, Frank Pechstein (b. 1915) and Max & Pechstein (b. 1926), be gon recording their personal knowledge of their father's life and art, as well as documenting it as the basis for eventual scholarly investigation. I would like to thank both of them for giving me important information and making documents available for this study.
- 6. Hentzen, 1959," does not mention Pechstein. He was, however, included in the 1960 exhibition organized by Martin Lr ban; see Schleswig Holsteinisches Landesinus- um and Miseinn für Kunst und Gewerbe, Hamb ich 1960."

The collector and art historian Lothar Buchheim's consideration of Brucke sculpture refers to Heckel, kirchner, and Schmidt Rottluff, but not to Pechstein, who is treated exclusively as a painter and graphic artist? However, contemporary scholars did not neglect this aspect of Pechstein's ocuvre,* In his memoirs, Pechstein wrote that while a student at the Dresden Kunstgewerbeschule, he participated in a competition on the occasion of the 1902 Internationale Raumkunst-tusstellung and was awarded the prize for sculpture.*

Pechstein, who came from a family of craftsmen and was himself trained as one, saw no need for kirchner's philosophical claim for the equal status of the fine and applied arts. This background also helps to explain why Pechstein devoted so much space in his memors to methods of labricating objects, particularly in the detailed description of his 1914 visit to the Palau Islands. Pechstem made this journey "to look for Elysiom in Palau" and to find the "unity of nature and man,"10 but with the outbreak of World War I be curtailed his travels and returned to Germany. The artist considered his use of native sculpting tools to be essential, and acquired them specifically for utilitarian purposes from private ethnological collections and dealers. Pechstein took pleasure in the creative process and for him it was uncomplicated by theory; this does not facilitate the separation of his sculpture per se from related works of craftsmanship

In Dresden and Berlin, Pechstein was just beginning his artistic career He had married early, in 1014. His economic situation provided a practical motivation for creating his own furnishings and decorations, as well as a rationale for accepting work outside the strict boundaries of painting and graphic arts. This commercial work included murals, mosaics, stained glass windows, glazed tiles, painted wall coverings, and embossed works in precious and common metals. If this numerous pieces of metal and amber jewelry differ only in their smaller scale from those objects commonly referred to as sculpture. 12

At present, approximately twenty sculptures by Max Pechstein can be identified in photographs and graphics. Most have been lost or destroyed. They can be divided on the basis of date and material into three groups of roughly equal size. A brief chronological note is of use here. In the fall of 1907, after having been awarded the Sächsischer Staatspreis für Malerei (Sa von State Prize for Painting), Pechstein traveled to Rome and then to Paris, where he stayed, with occa-

sional visits to Berlin, until the summer of 1908. His final move to Berlin probably did not take place until the spring of 1909

The works of the first group date from 1968 to 1909; they were probably created by the time Pechstein moved from Dresden to Berlin, but after his travels to Rome and Paris. These sculptures were initially modcled in plaster and then cast in metal. Among them are a male hist and an acrobatic group consisting of three. nudes.13 Of this group the only piece which survived is the Fase Carrier (cat. no. 112), a retief made from the tin of discarded paint to bes. This work conveys Peclistein's intention to free himself in his sculpting. from traditional techniques and to indute his urge toward experimentation. The model for this relief was Peclistein's future wife, Lotte, then seventeen years old. 4 The motif of a person carrying a burden on the head, which oce its frequently in Pechstein's work, derived from his time spent in Italy; the light-catching and animatedly reflective surface with its Impression. Ist effect points to France and especially to Rodin's work. Bodin's tiafluence is even more evident in other scriptures of this group, for example or a head of 1908. (fig. 1, p. 47). With creative results such as these, Pechstein proved himself to be a mediator between Frency elements and the art of the Brücke, 15

The s.x identifiable sculptures of the second group. all date from 1015. Pechstern's nude figures Dancer. and Female Dancer (probably destroyed) to characterize the calculated attention which the Bracke artists brought to the study of the human body's form and freedom of movement.47 Dance had played a central thematic role in Pechstem's work for many years. The two dance figures are Expressionist in their exact gerated motion. The Expressionist quality of Runner of the same year (probably destroyed) is focused in the figure's head, which is depicted at the moment of greatest strain. Runner is certainly the strongest piece among the sculptures of 1915, most of which were intended to be east in bronze and are now lost. in chousing brouze, a traditional material in Academic sculpture. Pechstern differed from his Brücke friends, who favored wood. Only one wood sculpture of his from 1915 is known – a head (lig. 2, p. 48) with magr cal, spellbuiding features that for the first time betray Pechstem's earlier encounter with exotic sculptures in the Volkerkunde-Muset in Dresden. This wooden figure recurs in several of Pechstein's paintings. Hs.

13. Documented in a photograph in Pechslein's state

distinct forms and metablike surface treatment further distinguish it from the contemporaneous wood figures of Kirchner and Fleckel, with whom Pechstein had particularly close contact. Closer to the Brücke style are Viermind (1915, fig. 4, p. 49) and houng Viermind (1917, fig. 5, p. 49). Two letters, both dated May 27, 1917, bear pen-and-ink drawings which depict the latter sculpture next to others also carved from mart and thus far unidentified (fig. 1, p. 170)

Five carvings of 1919 form a discrete third group. These sculptures are Pechstem's most direct and compelling transformations of Palau motifs. Because they were so heavily based on personal experience, their abstraction and individual adaptation did not go as far as Kirchner's and Schmidt-Rottfull's wood fig. ures which had been inspired by similar models. The latter two artists were neither as impressed nor as bound by a knowledge of their figures, original significance and context as was Pechstem. He had not only acquired and used native tools, but had also used mones common in Palan as titles for some of his sculptures - for example Moon (fig. 9, p. 50) and Quarter Moon (fig. 6, p. 49). He also carved furniture with the forms and motifs he had seen in the South Seas 20 After. 1919 there does not seem to have been another similarly productive period of concentrated sculptural work. Yet Pechstein did intensity his contact with sculptors such as Belling and Garbe, friends with whom he jamed the Novembergruppe and the Arbeitsrat für Kunst in Berlin, Most probably Pechstein did create occasional carvings or sculpture - they of ten occur in his later paintings, drawings, and graphic works. But because he surrounded juniself with sculptures, cult objects, and tools from the South Seas, it is often difficult to ascertain which works are from his own hand #GAV

Scherer

Hermi en Scherer

Born 1893 Rummingent

dick 1927 Baser Switzerrann

Any discussion of the work of Swiss actist Hermann Scherer mevitably leads to an evaluation of his complex relationship with Ernst Laidwig kirchner While Scherer was trained as a stonemason and created rather academic sculp

tures under the tutelage of Swiss sculptors Otto Boos and Carl Burckhardt, he cast aside this training when introduced to Kirchner's work in Basel in 1923. The large exhibition of Kirchner's paintings and graphics held in June of that year at the Kunsthalle Basel provided an opportunity for Scherer and the young Basel artists Obert Muller and Paul Camenisch to study and discuss Kirchner's work in depth. Scherer was so moved by it that in August he went to visit Kirchner, who had been living at Frauensireb near Davos since 1948. The next year, Scherer created his first sculpture directly influenced by Kirchner's style as well.

Scherez Muller, and Camenisch visited kirchner frequently over the next two years, forming the Bot-Blau group which they modeled on the Brucke. Kirchner – who for years had dreamt of forming a school of artists with views similar to his own – was delighted by the excited response he found among these young artists. While the group lasted only a few years (cut short by the early deaths of Scherer and Moder), for a white it fulfilled Kirchner's hopes for a progressive artistic community Kirchner commemorated Midler and Scherer in a life-size sculpture and in a large woodcut entitled *The Friends* (fig. 15, p. 128, and cat no. 72; also see fig. 12, p. 126).

During his brief career, Scherer is known to have created over Eventy wood sculptures; today almost all arc extant. The subjects of these works are human figures in direct, emotional relationships - a mother and child, lovers, and friends - many of whom are departed. in startlingly primal postures. Airchner wrote, "The woman that Schorer creates is neither a Venus nor a Madonna, she is a woman who, half bent over and looking around with the eyes of a mother, is taking a child across a shabby-looking street. She is a certain type of our time "1 Compositionally, Scherer's works. have a complexity generally absent from kirchner's. carvings, he was undounted by large-scale groups of intertwined figures. In three sculptures, Mother Nursing Child (cat. no. 117), Lovers, c. 1926 (cat. no. 120), and Steeping Homan with Boy (cat. no. 121), Scherer rombined a reclining figure with another interwoven. body. Although the positions and perspectives are awkward, Schorer managed to convey a sense of compressed space

Lamentation (cat. no. 118) is Scherer's most ambitious sculpture, depicting a mother with her dead son and monening daughter. The smooth surfaces of this work, as well as those of *Steeping Homan ii ith Boy* and *Lovers*, c. 1926, were painted with ceric, lifeless, ai d unreal colors. These uncharacteristic yellows, greens, and oranges were applied to extremely naturalistic figures, creating a contrast that leaves a haunting image in the viewer's mind. Unlike much of kirchner's and Midler's sculpture, which is rough bewn and bears chisel marks. Scherer's sculpture has carefully smoothed and polished surfaces.

Not surprisingly, many of Scherer's sculptures are related to large, forceful woodcitts which depict summar subjects. Lamentation is represented in the woodcut Self-Portrait with "Lamentation" (cat. no. 119). The Lovers sculpture of 1924 (cat. no. 114, and fig. 2, p. 175), three quarters life size, is also directly related to a woodcut of the same title (cat. no. 116). The latter share a directness of approach, one feels that the artist attacked the wood with similar force in both the print and the sculpture.

At the April 1925 Rot-Blau exhibition at the Kunsthalle Basel, Scherer's sculpture appeared in great proliferation and made a very strong public uppression. Although by this time Kirchner already had a large ocuvre of carved sculpture (though slight in comparison with his graphics and paintings), little of it had been seen publicly. Pernaps it was this Rot. Blau exhibition which prompted Mrchner's concern that his own sculpture would be overlooked. At this time he wrote to art historian Will Grohmann, "My friend de M. [Louis de Marsalle, Kirchner's pseudonym] reminds me that the time has come to publish my sculpture.": He was concerned that the work of the Swiss artists would become known without recognition of their inspirational source – his own sculpture. immediately thereafter, under his pseudonym. kirchner wrote an article in Der Cicerone that was the first extensive publication of his sculptural accomphylimenta (see translation included in this catalogue, pp. 45-16).

t infortunately, the Bot-Blau group did not last long, for Muller died unexpectedly in 1926. That same year Scherer fell ill, and he died in May 1927. A memorial exhibition of his work was held at the Kunsthalle Base in 1928. On the occasion of his death, Scherer was lauded in newspapers and periodicals by artists and critics, including birchner and the critic Georg Schnadt. - S B

Schiele

Egon Schiete Barn 1830 Tu in Austria

died 1918 Vierna, Austria

Egon Schiele belongs
among those Austrian art
ists who made truly significant contributions to modern art after the tuen of the
century. Early in his career
he exhibited frequently in
Germany, gaining considerable recognition there

In 1916, the German journal Die Aktion devoted a special issue to him. Although by this time he had begun to self-some of his works to a small circle of admirers, his definitive success did not occur until the great 1918 exhibition of the Vienna Secession, where the central room was reserved for nucleon of his oil paintings. We will never know if this new stature might have occasioned a change in his view of man or the arts. He died at age twenty-eight - three days after the death of his pregnant wife — during the influenza epidemic of 1918 that devastated a hungry and exhausted Central Europe.

Most of Schiele's paintings and even more of his drawings and watercolors are dominated by line, which often acts as a horder luming his strong and freely empleyed colors. This line is fervent, nervously sensitive—and frequently abstract, without ever becoming physically inaccurate. The human figure was often placed within undefined or vacant space. The concentration on the body's form and gesture functions as a seismographic notation of the emotions and humanity of the model.

Schiele began studies at the Art Academy of Viennam 1906, and the following year established a friend-ship with the artist Gustav Klimt, who was twenty-eight years his senior. At this time, klimt was both a farnous and, due to his expressively crotic works, an infamous artist. Becognizing Schiele's talents, klimt introduced him to some of his own patrons, as well as advising him and encouraging him to break with the traditional academy after only three years of study.

In 1910, with some fellow students, Schiele founded the Neukunstgruppe (New Art Group), even writing a manifesto which proclaimed that "the new artist is and must be biniself without reservations; he must be a creator, he must unreservedly "without recourse to the historical or acceptable "build the foundations [of the new art] entirely by himself." This nonprogrammatic stance gained the group a few exhibitions, but ultimately made a rather negligible impact on the Viennese art scene. For a while Schiele worked for the Wiener Werkstatte, the tamous Viennese design association which ushered in a new style in utilitation of jects, everyday clothing, and interior design.

Schiele left Vienna twice for short periods but found the provincial towns of Krumau and Neulengbach depressing and their inhabitants resented of his lifestyle. He lived with his model, Valerie Neuzil, in Kryman and while in Neulengbach was falsely accused of seducing a minor During this latter in cident, the police confiscated some of his drawings as pornographic, and one of them was burned by the judge. Schiele was sentenced to twenty-four days in fail, but having already been detained for twenty one, be had nearly served his time

The unabashed and often shocking frankness with which Schiele depicted men and women as sexual beings brought him greater fame than did his large number of portraits. These portraits can be compared in the power of their psychological insight to those of the other great Austrian Expressionist, Oskar kokosetka. The latter portrayed the intense individuality of his silters using changing approaches and techniques, while schiele invariably uncovered vulnerable, haunted personables. This is particularly true of his many self-portraits, in which he accentitated mood by emphasizing harsbly confrontational postures and masochistic forms which seem to border out self-flagellation

All of Schiele's works challenged the society of the period. Contrary to the contemporary bourgeois ideal of an elegant, eleverly designed appearance, Schiele depicted man and woman as prisoners of their sexualits and demonstrated the loneliness of their existence. If was nearly impossible for the public of his time to recognize that his work was not voveurism, but instead a brutally bonest expression of what society tried to conceal beneath civility and silence. The Vienna of this era was, after all, the arena in which Signmind Freud worked and lived and in which Otto Weininger. published Geschiecht und Charakter (Sexuality and Character) in 1905, committing smede shortly thereafter Weininger had separated man and woman into irreconcilable opposites, and it is this strain in society that Schiele made visible.

Schiele created only one sculpture during his afetime, a self portrait (cat. no. 122). When compared with his drawn and painted self-portraits, this bust initially seems to lack their overwhelming strength. conviction, and near-bratality. The tilt of the head, the wide-open yet empty eyes, and the carefully shaped mouth present a self-unage free from the strains sopronounced in his other self-portraits. The bi st shows an openness new in Schiele's work that can only be parbally explained by the difference in medium, Farremoved from the driven, martyred images of earlier. years - best exemplified in a 1914 drawing of himself as St. Schastian - this sculpture with its upward gaze. signifies a spiritual search and a new and more selftolerant vision. It reveals Schiele's youthful death as an even more profound loss - PW G.

In 1980 an edition of 300 bronzes (measuring 26.5 cm, 104 in) in beight and inscribed I seek Schale 1980) was apportised.

Schmidt-Rottluff

The art of Karl Schmidt Rotthiff, the youngest founding member of the Brucke, is rigorous and uncompromising. It was not intended to please, to meet the viewer halfway, or to be beautiful in any traditional sense. When asked about

his artistic goals, the artist responded

Barn 1884 Rutt all (Sax +

Karl Schoudt Bottlah

died 1976 Ber in

Concerning myself I know that I have no program only the inner longing to grasp what I see and feel and to find its purest expression. At this point I only know that these are things I come close to through art, not intellectually nor by means of the word ¹

thefore he became a painter, Schmidt-Rottfull, like most of his Brucke friends, had wanted to be an architect, and the laws and logic of construction came to figure centrally in his work. Sculpture, with its immediacy of material, has a definite and nushakable place in his occurre. The distinction between fine and applied art was basically foreign to the Brucke artists, and Schmidt-Rottfull in particular would have been the last to value his signature more highly on a painting or sculpture than on a carved and pointed wooden chest, on omber pendant set in silver, or a napkin ring of wory or horn.

In 1913, in the Chronik der Klunstlerf Glemein vehight Brücke, Krechner eredited Schmidt-Rotthal with having made "the first hthographs on the stone," and the title page of the 1909 Brucke Jahresmappe Chinual Portfolio), which was devoted to Schmidt Rottfoff, bore Kirchner's own woodent of his reticent friend. Nonetheless, Schmidt-Rottloff undoubtedly attained his greatest success as a graphic artist in his woodents," which led him directly to wood sculpture. The colored relief with two female nudes of 1911 (Brucke Museum, Berlin) can also be considered a wood block on the basis of its pictorial, flat composi-

tion. The same might be said of the carved and color fully painted wooden boxes, many of which the artist created during his summers at Dangast between 1907 and 1912. Fimma Ritler, the Oldenburg painter then staying with Schmidt Bottluff, witnessed "a creative power and abundance I have never seen anywhere before," and she expressly records his "releasing of wood sculptures from large blocks."

let it seems as if Schmidt Rottloff - in contrast to Heckel or kirchner—did not execute any trilly threedimensional figures before World War I. The heads created prior to that time retain the form of the original wood block. Simply cleaved from it, they are finished only frontally, to These faces, torn rather than carved out of the wood, bring to mind Schmidt Rottluff's four embossed brass reliefs of the evangelists (1912, Brücke Museum, Berlin), which were included in the Cologue Sonderbund exhibition, 11 A mask, now in the collection of the Schleswig-Holsteinisches Landesmuseum, is similar to them lumaterial and technique, although it is even more stylized. During this period Schmidt Rottliff's dialogue with Cubism and abstractic a was less visible in his works that address the human figure than in the wooden and metal objects which he was prolifically creating. After returning from a 1911 stay in Norway during which he probably encountered wood and stone as materials - he exhibited no less than filteen. wooden boxes adorned with colorfully painted caryings. In the aforementioned Sonderbund exhibition of 1912, he was the only Brucke painter who exhibited works of craftsmanship, specifically jewelry 14 In the Herkbund exhibition of 1944 he exhibited a calinet. made to his specifications, as well as a small chest. One might say that Schmidt-Rottluff developed his ideas in painting and graphic arts and then expressed them in his sculptural work a few years later, achieving great success, this ocuvee of 1916 and 1917 alone justifies high praise when considered in the context of German Expressionist sculpture as a whole

Approximately forty wood sculptures are extant today, although they were originally probably greater in number. These works date from an immensely creative period and may be seen as representing Schmidt Rottfuff's response to World War I.

I now feel strong pressure to create something as in tense as possible. The War has swept away for me all that is past, all appears weak, and I suddenly see things in their awesome power. I never liked that sort of art which is a beautiful fascination for the eyes and nothing more, and I feel in an elementary way that one must grasp even more powerful forms, so powerful that they can withstand the impact of a people's lunney.

Although Schmidt-Bottloff never saw front line duty, the pressure of the War is captured and concentrated in his sculptures, In 1916, he was transferred to the press department of Hindenburg's headquarters in Kovgo, Russia,14 where he was in the company of fellew pointers Magnus Zeller and Hermann Struck, as well as poets such as Alfred Brust, Herbert Folenberg. Arneld Zweig, and Bienard Dehmel. Unable to paint during this period, the artist must literally have used every free moment to have created such a large numher of se tiptures. Birch, alder, and pine were obtained from the surrounding forests and worked with the most primitive tools, 'the significance of trees in Schmidt-Botthiff's work deserves considerable aften. from for it is not only the wood itself with which he had such a close relationship, but with its original form.

More than a quarter of the documented sculptures from the War years are total figures (females and a few male nudes, as well as clothed figures), while the majority consists of heads and some masks. Typologically and psychologically, the heads are highly differentiated, although connections between them do exist. In several instances their closest relatives are to be found in Schmidt Rottluff's graphic art. Withelm Niemeyer, the art historian and co-organizer of the Sonderbund exhibition, emphasized how wrong it would be to view these sculptures as simple transformations or even imitations of ethnographic, and in particular African, plastic art. In 1920, he wrote

Not the content, but the deepest creative spirit of natural peoples is in Schmidt Rottiuff's art, which is entirely structural in form. In order to arrive at his purely spiritual creations, he completely breaks down the natural appearance into units of pure imaginative form and out of these units reconstructs the worldview as a structure of deep intimacy. In dealing with all this, there is no talk of exterior, intended imitation; this affinity of form is an inner-

With one exception, all of the sculptures in the present exhibition are from the War years, which were so decisive for Schmidt-Rottliff's plastic and graphic art. The Green Head (cat. no. 123) is the earliest piece, and in this sculpture we find the greatest tension between the fibrous wood, intact in its natural state. and the carving, which sharply defines the form. (if the two full figures in the exhibition, Adoring Man of 1917 (cat. no. 125) was created together with at least two male pudes that are variations on the same. theme.10 Their surfaces, appearing to be embossed, sumulate metal. In fact, brouzes were cast from some of these wood sculptures - for example, a praying figure, which with a number of sinular works has been lost.17 In some of these figures, the hands and feet are missing, yet the baste rhythm of motion is unimpaired Through this reduction, expressiveness is increased. The Sitting Man of 1917 (cat. no. 128) is one of Schmidt-Bottluff's strongest creations, and its hieratic severity is reminiscent of early Romanesque or Archaic sculpture, in such monumentally stylized heads as the Green Red Head (cat. no. 127), Schinidi-Rottluß's work achieved its final formal appearance. As the artist wrote in a letter to Gustay Schicfler:

On various accasions l'arrived at an intensification of forms which, to be sure, contradicts scientifically determined proportions vet in its spiritual differsions is well-balanced. In relation to other parts of the body, in many instances I increased the head to monstrous size — it is the gathering point of the whole psyche, of all expression. But all other parts of the body tend in their spiritual motions toward the head, they gather in it. Thus the form develops such large scale completely on its own. With breasts it is no different. They are an erotic moment. But I want to separate this from the flux of experience; I would like to establish a connection between the universal and what is of this earth. Perhaps one may say this is an erotic sm intensified into the transcendental... **

The question of the relationship of Schmidt Bottloff's sculpture to that of tribal art, briefly addressed above by Niemeyer, occasionally led during the artist's lifetime to exhibitions in which his works

were juxtaposed with African art ¹⁸ Such installations had the artist's approval. Schmidt Rottinff, who surrounded himself with ethnographic objects and who frequently included them in his still lifes, could be as sured that such proximity would only make obvious the great distinction between influence and original creation. Formal concerns and their possible sources were only one aspect of the phenomenon known as German Expressionism, in which content and conviction played a role of at least equal value. During the 1916–17 period in Russia, Schmidt-Rottinff had already begun to create his first religious graphic works, and his Christ cycle of 1918 constitutes a high point of Expressionist religious art. ²⁰

The art historian Rosa Schapire, with whom Schradt-Bottlaff had been friends since 1908, was the hest to be concerned with his sculptures, and she planned to publish them after completing the catalogue of his graphic art in 1923.31 Schapire personally owned the largest collection of his sculptures, and in 1921 Schmidt-Bottlioft had decorated her Hamburg apartment with wall paintings, furniture, carpets, and other objects made either by hun or according to his designs, as well as with his paintings and sculptures. If these rooms still existed, as Will Grohmann has rightfully stated, one would have to "transport them to a naiscom as a document of the artistic spirit of the time."42 During the Second World War they were. destroyed; Schappre was forced to emigrate to a ng land, taking with her a large part of her art collection Although she was unable to realize her plan to publish Schmidt-Rottluff's plastic work, some of the sculptures. went to other private collections or were returned to the artist, who had lost most of his own work. Shortly before her death, Schapire instigated an exhibition of Schaudt Rottioll's art at the nuiseum in Leicester. England, which included recent stone carvings.25 Although few people in Germany were then familiar with the artist's work, the British art bistorian A. C. Sewter recognized the carvings of the early 1950s as: representing "a post-war development of Schmidt-Bottluff's work.. more primitive and more calm in effect than most of his earlier creations. Vaguely remimiscent both of Gauguin's scripture and of early Mexi can carvings, they nonetheless have a distinctive character and an appealing simplicity and vitality." His

Schundt-Bottlidf's later years, he maintained an Expressionist sivle far looger than any of his fellow Brücke artists who survived the Second World War. The stone carvings constitute a second phase of intensive occupation with plastic and craftsmanlike tasks, one which is not inferior to the earlier period Throughout his ocuvre, Schmidt Bottluif's paintings and graphics were strongly interconnected with the sculptural and craftsmanlike works, and taese mutual interpenetrations await further research. — G W

Although the painter Martel Schwichtenberg was one of the best-known German artists of the period between the wars, her work and achievement currently await rediscovery. In both her life and her art, she was a pro-

totype of the Golden Twenties. Her father, a petty civil servant, having died young. Schwichtenberg was raised by her mother, who arranged for her to receive private art instruction in Hannover. She began formal studies in 1914 in Dûsseldorf, first at a private school and then at the kunstgewerbeschule, where she stud sed under Withelm Kreis, one of the most important German architects of his generation. At this time she published her first woodcut series, Cunnabar, which already reveals the influence of Futurism. Her first me person exhibition was held in Hagen, Westphaha, in 1915, followed by another at the Folkwang Museum, Hagen, where she met its founder, Karl Ernst Osthaus. as well as artists active in that area such as Henry van de Velde, Christian Roblis, and the sculptor Milly Steger, It was here that she may also have met Bernhard Hoetger, with whom she worked at the Bahlsen cookie factory in Hannover, beginning in 1917.2 Liberally sponsored by the company's owners, art lovers who favored modern marketing techniques. Schwichtenberg's employment at Bahlsen provided her with permanent economic support. She designed the Bahlsen trademark, which is still in use today. containers, and posters, as well as creating murals and large windows for the factory fiself. The extent of her participation in Bahlsen's TET-city plan, a collaboration with Hoetzer that failed due to inflation and Her mann Bahlsen's death, must still be clarified. Woodonts which appear to have been executed by Schwich tenberg and are included in her estate extended this realistic construction project into atopian dimensions.

Schwichtenberg spent the summers of 1918 and 1919 at the artists' colony in Worpswede near Bremen, where the natural lyricism of her early years gave way to a revolutionary socialist phase. In 1920, she acquired a studio of her own in Berlin, at that time an intellectual, artistic, and social center, and adopted the city's demanding fox trot rhythm. Courted by literary

I Apart from short entries in artists dictionaries and the like, no detailed appreciation of Martel Schwichtenberg exists thus far Biographical data provided here is based on the artist's in muscript Mein Leben, which was written in abbreviated fashion shortly before her death and left to her friend, the art instorian Hans Undebrane.

men, including Johannes R. Bechent in 1920 she married the painter Robert W. Huth, who was particularly influenced by Schmidt Rottluff's monumental Expressionism. During this short marriage, the couple spent the summers of 1921 and 1922 near Schmidt Rottluff's house in Pomerania, and Schwichtenberg also came under his toffuence. This influence is documented in the six lithographs of the Aus Pommern (From Pomeranta) series as well as in the two wood reliefs discassed below. During the winter months, Schwichtenberg made the acquaintance of many artists, including Nolde, Otto Mueller, Pechstein, Archipenko, and Belling, but her closest friendship, which began in 1920, was with art historian William Valentiner and his wife. In 1925, the three traveled to Italy, where against the background of the clear architectories of the Italian tandscape, Schwichtenberg's individual style emerged - an unshaded and colorful Neue Sachhehkeit

During the following decade Schwichtenberg deternamed, particularly with her portraits, the atmosphere of Berlin's numerous art exhibitions prior to the Hitler era. She had personal and reciprocal relationships with those who commissioned her work – including Valentiner, Barlach, the actress Tilla Durieux, and art dealer Affred Electriheim. Electriheim, for example, displayed her work alongside that of Marie Laurencin and Sintenia, creating in this exhibition a harmony in which the various sounds retained their individuality Schwichtenberg's close circle of friends was made up primarily of writers such as Walter Hasenclever, Bené Schickele, and Colette, some of whom she had met during her extended friendship with publisher Kurt Wolff

When the National Socialists assumed power, schwichtenberg emigrated by way of Italy to South Africa, whose landscape and people fascinated her and inspired numerous watercolors. Unfortunately most of these, along with her other belongings, burned in a 1938 fire that destroyed her Johannesburg home. At the beginning of 1939 she accepted an invitation from the Valentiners, who had emigrated, to Join them in the United States. But in August of that same year, she decided to return to Germany, where the outbreak of the War took her freedom of choice from her. After spending the first winter of the War in Berlin, she took

refuge in the Black Forest, moving from place to place. At the beginning of this period she painted landscapes and, toward the end, still ites of her immediate surroundings. Though mortally ill she nonetheless in vented a new graphic process. A few months after the end of the Wag Martel Schwichtenberg died before reaching the age of fifty She bequeathed her estate to Eva klinger, a friend of many years, and to her husband, It then passed into the custody of the Schleswig Holstemisches Landesmiseum, which is still engaged in the scholarly investigation of it. The legacy, which has been augmented by the Khingers, is an important one, *

There are few sculptura: works in Schwichtenberg's oeuvre. The catalog of her 1922 exhibition at the Garerie Ferdmand Moiler in Berlin lists three wood reliefs, in addition to twenty-five paintings, nineteen watercolors, and numerous drawings and grapiucs. che reliefs - Self Portrait (cat. no. 150) and the two reliefs entitled Pomeranian Homen (figs. 1 and 2, p. 191) - are perhaps the artist's only works which may properly be considered sculpture, and even these are close to woodcuts in technique. Schwichtenberg had become faminar with the latter process at an early age. and she created a total of approximately forty woodcuts. The Self-Portreat, part of the estate now owned by the Schleswig Holsteinisches Landesmuseum, is the smallest of the three panels, each of which is carved from a thick wooden board and occasionally bright ened with red color Self-depictions play an important role in the artist's work, and the signature carved at the lower right seems to confirm that this is indeed a self-portrait #5tylistic considerations indicate that this work originated no later than 1920, when Schmidt-Bottluff's influence was not yet dominant, and the art ist was still close to her collaborative work with Hoetger. The preservation of large planes, the concave. differentialism of forms, and the occurrence of unexpected ornamentalism are renumiscent of Hoetger's brick reaefs, in which he broke his Jugendstil ties and drew closer to Expressionism, to a transition which in Schwichtenberg's case was less abrupt. The Pomer. anian Homen reliefs, acquired in 1972 by the Altonaer Museum in Hamburg, 11 were probably created later. than the Self-Portrait Published in 1921,12 they already revealed Schmidt-Boitfuff's influence. The three reliefs are not necessarily related to each other; created for their own sake, they are intended as autonomous pictures which require individual frames. - G W

Franz Serwert

Born 1894 Calcone

hed 1933 Cologne

The works of Franz
Serwert, an important but
little-known graphic artist,
painter, and sculptor,
crearly demonstrate the
writer Ivan Golf's assertion
that Expressionism was
not "the name of an artistic
form but that of a belief, a

convection." Serwert was one of the most politically active of the Expressionists. A strong and faithful Catholic who had attacked the church for failing to prevent the horrors of World War I, he belonged to a number of antiwar groups, particularly that centered around Franz Pfemfert and his journal Die Aktion of Berlin, Later Serwert became a member of the Anti-Nationale Sozialisten Parter (Anti-National Socialist Party) and was a close friend of Bet Marut, the editor of the radical journal Der Ziegelbrenner (The Brickmaker). (Marut is better known as B. Traven, the nom de plume be adopted after his participation in the Munich revolution and subsequent flight to Mexico.)

Seiwert himself wrote a great number of articles for various pontical and artistic journals, and like so many "second-generation" Expressionists, he demanded a new didactic art capable of communicating its message to the masses. He opposed the self-glorification of artists, gallery promotions, aesthetic criticism; and the practices of the art trade in general. With a group of friends he formed the Gruppe Progressiver kunstler (Group of Progressive Artists) in the early twenties, and in 1929 he became cofounder and editor of the radical journal n-z, which existed until 1935. His political activities were uniformly pacifist and socialist, based upon his strong religious convictions.

Sowert studied at the school of the Battenstrauch Joest-Museum in Cologne from 1915 to 1915, and he worked for an architect prior to beginning independent work as an artist in 1916. His earliest works were graphics (wood and linoleum cuts), many of which were published in *Die Aktion*. From 1917 to 1919, he published a number of woodcut portfolios, the first of which consisted of seven works appearing under the title Steben Klange zum Evangelium Johannis (Seven Sounds for the Gospel of John). These early graphics do not differ greatly in form from the idiom prevalent in most contemporary Expressionist journals.

When betweet began to paint around 1919, he quickly developed a very different sivie. He abbreviated the human form into a deministrative, static type, haces became masklike, bodies flat and stylized, and space was indicated by the overlapping of forms. Most, if not all, of Seiwert's paintings express his strong social concerns, it was only logical that be would ultimately extend this same formul canon to his graphics, and the power of these human hieroglyphs became even more obvious when he employed them in advertising and exhibition design. During this same

I from Golf in an article on the "death" of Expressionism writen for the Yugoslavian journal Zent, vol. 1, no. 8, 1921, p. 9

period, Seiwert also painted a number of abstract compositions which retain his characteristic orderly, nearly geometric approach

Servert was acquainted with many artists during his lifetime, among them Max Ernst. This friendship faded in 1919, however, when Servert recognized that the Cologne Dadaist did not share his social concerns. In contrast, the friendships he formed with the painter Heinrich Roerle and with Freundlich, both of whom shared his political and social convictions, were especially important to him. It was undoustedly Freundlich who encouraged Sciwert to begin to sculpt, and many of Servert's three-dingensional works were made during Freunditch's stay in Cologne, Seiwert, in Jurn, infinenced several younger artists, among them Gerd-Arntz and August Tschinkel, who later transformed Servert's painting style into the graphic forms employed to develop the first successful visual presentation of statistics (known as the Vienna Method of Pictorial Statistics).

Serwert's sculptural work is anique in his ocuvre for its relative lack of pontical content. Constantly changing his approach to the three-dimensional form, Servert made approximately sixty sculptures, mostly in a small format. Few of them are extant, and very few can be securely dated. These works consist of lug ity imaginative heads, a few figures characterized by strongly expressive gestures, and some Constructivist compositions. The small Head of Christ (cat. no. 131) conveys an expression of suffering which seems due in part to the artist's obvious struggle with the clay medium. The head is tilted to the right; the face is clongated, and this elongation is accentuated by the wavy forms of the bair and heard. The grown is recipographically indistinct, but it enhances the dignity of the head. It is well known that Selvert was deeply moved by the Medieval sculpture found it, many Cologne churches, and the angle of this particular head recalls that often seen in Medieval sculptures of saints, where it was used to indicate mourning or suffering.

The Caller I of 1919 (cat, no. 132) is one of Sciwert's few sculptures dominated by a single, strong gesture. Learning slightly backward, the figure has copped his bands around his month to give additional volume to this call. Conventionally dressed in trousers and jacket, he was assigned no indication of social status, and the extremely abbreviated facial features make his age difficult to ascertain. His legs are placed slightly apart, emphasizing the urgency of his call. This increases the symbolic import of this sculpture, which suggests a railying cry addressed to the Expressionists during this period of revolution.

Servert's triendship with Freundlich and the encouragement of the older and more experienced sculptor undoubtedly influenced the *Head* of about 1919 (cat. no. 155). Its form is related to Freundlich's masks of 1969–12. The elongated and slightly undulating head is an extreme appreviation and has roots in the ancient or ethnographic art which stimulated younger artists at this time. The nose ridge recalls Cycladic sculpture, joining the two deep hollows of the

eyes and ending in a tight, small mouth. The Head is a hierarchic, haunting image of man's confrontation with life; its abstraction prevents any precise definition of underlying emotions. It shows a greater mastery of the medium and a far more advanced sense of three-dimensionality than is seen in the Head of Christ.

The Large Head with Open Mouth (cat. no. 154) appears as a further step toward a concept of "man" which is so abstract that the head alone is capable of representing his very being. Here the open mouth evokes less a cry of strength and negency (cf. The Caller I) than one of pain and suffering. Contrary to the hierarchic and meditative Head, this work acticulates the theme of man's vulnerability introduced by the earlier Head of Christ.

Only a photograph of the plaster model of the sculp ture entitled *Horker* of about 1925 (Bohnen, 593, 594) remains. (A variation of the same figure is extant, however, as a wooden replica in the collection of Professor Kubicki, Berlin.) In this sculpture, Seiwert most closely approximated a three-dimensional translation of the figures seen in his paintings. The degree of stylization permits the viewer to describe the work as an idol. Another sculpture menting special attention is Seiwert's memorial for his mother (stone, 1929, Nordfriedhof Köln, Bohnen, 397). Based on Brancusi's famous *Aiss* for the grave of Tanosa Gassevskata (1910, Cimetière Montparnasse, Paris), Seiwert's sculpture modified its source into a flat relief which articulates his concern with geometric order.

Within the development of Expressionist sculpture, Seiwert's works are important examples of the continuous effort made by a very talented actist to perfect an additional medium of expression. Seiwert was occupied with sculpture for only a limited period during his artistic career, the years between 1916 and approximately 1926 (the atorementioned memorial of 1929 is an exception, but Seiwert only made the model for this work and left the execution to a stonemason). These plastic works as a whole are of less significance as Expressionist accomplishments than as examples of Seiwert's search for new forms.

Servert died in 1953 of an X-ray burn, which he had sustained at the age of seven and suffered from all his afe. His death came just before the Nazis could destroy his work and, in all probability, the artist himself - PWG.

In 1906, at age twenty, Benee Sintems hegan her artistic training at the **Aubstgewerbeschule in** Berlin, where she studied portrait painting under Leo von konig and then sculpture under Wilhelm Haverkamp, Early in her

career she made sculpture her primary commitment and adopted a style and choice of motifs that were to become her trademark. The majority of her work is not Expressionist in character, there are many examples of small, deticately modeled bronzes, often portraying young ammals at play or at rest. Her sentimental treatment of the leggy, often awkward, stances of such beasts brought her an invitation to exhibit in 1915 with the Berlin Secession. This opportricity, no doubt, led her into association with important members of the Berlin art circle, including Barbach, Kofbe, Lehmbruck, and Ernesto de Fiori, Hercarly works won the acclaim of Bainer Maria Bilke. This famous poet, who had served as Bodin's secretary and been associated with the Worpswede artists' colony became a patron to the young Sintenis and introduced her to important contemporary literary fig. ures. Her work excited a great deal of attention, and she was included in Alfred Hentzen's important pubheatton, Deutsche Bitdhauer der Gegenwart of 1934,1 as well as being represented in the seminal 1951 exhibition held at The Museum of Wodern Art in New York

Modern German Painting and Sculpture

Statems' neaver of basically scattmental animal fig. mes was punctuated by her most important large. scale commission, Duphne (cat. no. 155), which marks an exceptional moment in her career. A small brouze maquette, Small Daphue, created over a decade ear. tier in 1918, served as its prototype. A continuing thread of interest in subjects from Greek mythology can be traced throughout \$ atems' career. Here the legend of Daphne, as related in Ovid's Metamorphoses. served as an inspiration. Desperate to escape Apolto's sexual advances, the virgin nymph Dapline invoked her father, Peneus, a river god, who transformed her into a laurel tree.

No sooner had she finished this prayer their a deep lethargy seized her limbs, her tender breasts were covered over by a delicate bank, her hair grew out in eafy sprigs, ber arms in branches, and her swiftly Reging feet were held fast by shiggish roots.2

In this work, Sintents captured Daphne's transition trom woman to tree. The attenuated body has begun to lose its human proportions. An extremely slender form has superseded any reference to human physical. I ceadth. Isnees, ediows, and breasts have become

gnarled, and hair is represented by souring, flamelike leaves. The augular silhouette describes changes tymcal of the direction and growth observed in a tree's trunk and branches, the woman's hubs no longer carry the promise of their anatomical function. (The Daphne legend had also inspired Lehmbruck's Female Iorso of 1948 (cat. no. 95). Lehinbruck's anatomical distortions, however, are even more pronounced than thuse of Statenis)

Sintenis' Dapline was commissioned by Carl Georg. Heise, director of the Mi seum für Kuast und Kulturgeschichte, Lübeck, for the museum's senlpture garden. At the museum, the piece was installed in close proximity to a tree standing on the border of the neighboring property, in such a manner that the work's caused arms merged with the tree's upper branches, Four casts of the sculpture were made. The version at Laibeck was the only one in the edition to be gilded. A year after Sintems created Daphne, Heise commented on the significance of the step she had taken

The art of Sintenis has been called precious and there has been an attempt to confine her to the salon. But without losing any charm she here enters the demanding realin of "free sculpture" to a presentation of a work of outwardly enlarged measurements - Daphne, two-thirds life-size. Thus she most conspicuously reveals her nature, which is not one of playful daintiness but of the true grace that arises from mature mastery.3

In the remainder of her ocuvre, Sintems concentrated largely on male athletes and animal ligures. Her Self-Portratt of 1935 (cat. no. 136), however, is another unusual example of her potential for expression. The self-portrait was explored by a significant number of German Expressionist sculptors. Statems' treatment of the three-dimensional volume was radical; she presented herself literally as a mask, as if the face had broken free from the head. The auttrogynous quality of the face and the attention to the signs of age conveyed in the mottled surface are Expressionist in sensability.

Sintems was nominated to the Berlin Academy in 1947, where as a professor she enjoyed considerable. popularity until 1955. She died in 1965 in Berlin, re.atively forgotten after a decade of secluded retirement. S.P.

M. ly Steger

Rorn 1881 Rheinsberg

Jod 19 se erin W onset

Milly Steger studied sculpture with Carl Janssen in Dusseldorf, with kolbe in Berlin, and with Rodin and Mailfol in Paris. Very early in her career she received the support and recognition of renowned art critics and museum directors

such as Hans Hildebrandt, Alfred kulin, and Max-Sauerlandt (see p. 51). This esteem was evoked premarily by her special gift for architectural sculpture. Karl Ernst Osthaus, the director of the Folkwang Museum in Hagen and a promotor of the integration of modern art in public spaces, recognized the architec tonse qualities of Steger's sculpture. Following Steger's participation in the Berlin Secession of 1910, he invited her to Hagen. There she became a member of the api St (uband artists' colony useeing congenial artists such as Jan Thorn Prikket, who had revived the art of stained glass; the painters Christian Bohlfs and I mil Budoll Weiss; and the architect and craftsman J M. Lauweriks. At this time Sieger created a number. of decorative architectural sculptures for her own home, as well as for several public buildings

to 1911, the Hagen city building office commisstoned four large, pillarlike, female stone figures for the newly opened municipal theater. The sculptures Steger created were not traditional, they emphasized structural elements, Cubist abstraction of form, and the substantive quality of the material. The citizens of Hagen rejected these works as immoral, and the efforts of the Berlin sculptor August Gaul, as well as those of museum directors Lindwig Justi, Hans Swarzenski, and Hans Tschudi were required to appease the populace. (After they were damaged in World War II, the figures were repaired by Hagen sculptor Karl Mestrath) Other commissions followed among them two larger-than life plaster (laps) figures which Steger designed for the niche next to the entrance of the Folkwang Museum. Due to the War, the sculptures could not be east in bronze, today a single bronze head above the entrance testifies to this thwarted project. Through Osthans' contacts, Steger was able to show her sculptures at a number of important international exhibitions both before and during. World War I, and in 1914, he succeeded in having her appointed Hagen's city sculptor.

Of the few scriptures for public spaces which Steger made or designed between 1914 and 1918, only the Blacksmith of Hagen memorial design need be men tioned. Ernst Ludwig Nirchner also entered the competition for this scriptural commission, but neither he nor Steger was selected the winner. This scripture as well as others, such as a painther for the city half of Hagen, demonstrate the characteristic quality of Steger's modeling, which was determined by the rectome conditions of architectural scripture. In all phases of her work the influence of George Mone, whose scripture was so visible at the Folkmang. Min. cum. (fig. 1, p. 157), remains unmistakably.

Not until Steger's return to Beron in 1918 aid the blocklike compactness and static quality of her figures. loosen under the influence of Expressionism. Steger now chose wood rather than stone as her material. The motion of her figures became freer, the rhythm more excited; dancelike, they often display extreme torsions (cf. Jephthah's Daughter, fig. 1, p. 199) and constant shifts of equilibrium. Aftred Kuhn has commented on Steger's expression of a polarity of psychic states: "The tendency on the one hand toward life, physicality, affirmation of the senses, roundness, and the tactile, and on the other striving for descrisualization, asceticism, a furning away from the physicalthese are the two poles from whose antithesis the work of the artist creatively emerges."1 By comparing Steger's Jouth Rising from the Dead (cat no. 138) with Minuc's knecking Figure (eat, no. 102), one may discern how Steger incorporated such expressive volues within the architectonic modeling of her figures through the use of flowing contours, contrasts of borizontal, vertical, and diagonal lines, and emphastized breaks at shoulder, waist, and knee. In contrast to the more stereotyped facial features of contemporary fig. ures by Hoctger, Emy Roeder, and Garbe, the dramate cally enlarged eves and open mouth of the Youth Busing from the Dead are more expressively modeled. In Anechng Youth and Two Girls (cat. no. 137), we see a similar Expressionist concentration in psychological characteristics, such as the incluration of the beau and mimetic details. As in the earlier, architecturally related figures, the interplay of body and garment is an important element which intensifies the composifion's expressiveness

Beginning in 1925, Steger returned to a more naturatistic style while retaining some Expressionist features, such as an inchnation toward the decorative and the use of certain characteristic postures, for example, the crouching female figure. Because of this continuits, the stylistic boundaries of the sculptor's Expressionist phase, which may be said to fall roughly between 1918 and 1922, are not absolute. Steger's close contacts in the world of dance are documented. m a number of portraits, such as those of the actresses. Gertrud Eysoldt (executed to the 1950s) and Heleite Thimig (c. 1924, bronze) and of the dancer Mary Wiginan (c. 1920; destroyed). With the exception of Steger's architectural works in Hagen, only a few of her sculptures survive. Works by her can be for nd m the collections of the Rijksinuseum Kroller-Maller, Otterlo, the Withelm-Lebaibruck-Museum der Stadt Dursburg, and the Nationalgalerie, Berlin. – J.H. W.

Essen, destroyed in 1944

Christoph Voll was a member of the generation which inherited an Expressionist legacy from the artists of Die Brucke and Der Blane Reiter. This second generation of Expressionists had to interrupt its studies to endure the First

World War and in doing so not only lost four years, but returned home far more politically and socially oriented than its predecessors.

It is still unknown why, after the death of his father, Voll's mother left her small child in an orphanage in Kotzing. Bayaria. Only in Voll's earliest works can we perceive the influence of these inflexible and depressing surroundings. At age fourteen, Voll refused to accept religious training and was instead apprenticed to a stonemason in Dresden. The War interrupted this training, and he served from 1917 on, largely at the front line, interestingly, this experience was rarely interpreted in his work. When the War ended, Voll returned to Dresden where he attended the kinist-gewerbeschule for a short time and their entered the hunstakademie to study for three years (1919–22).

There was never any question as to whether Voll world become a sculptor. He initially worked in hard wood, literally backing out figures of mins with small children. Typical of this period are sculptures such as Children's Funeral (cat. no. 144) and Blind Vian with a Boy (c. 1925–26, oak, Staathche Kunsthalle, Narls ed.: Concerning the latter sculpture, Voll stated that the child would feel the blind man's hand on his bend even if he lived to be seventy years old. All these sculp tures were based on memories of the artist's voids and convey the loneliness and frightening isolation of children among adults. The strength of the rough wood surface contrasts with, and thus accentuates, the figure's vulnerability.

Voll's many drawings were generally ideas for sculptures and usually placed the figure in an undefined space. His earliest woodcuts show a dependency upon the forms used by the young artists of the Sezession Gruppe 1919 in Dresden. This group included amor 2 others, Felrymuller, Forster, Otto Dix, Eugen Hoffmann, and Lasar Segall and provided an opportunity for them to interact with poets and writers. All of these artists were convinced of the new art's potential to make men better by confronting them with images of miner truth and human misery, which would in turn bring about radical changes in society

No work catalogue exists for Voll, but it is likely that his graphics were done primarily between 1919 and 924, since some of them were shown at his first large exhibition at the Dresden gallery of Emil Bichter in April 1922. Others were shown in the 1924 exhibition of the Sezession: Groppe 1919. He also created water-colors whose sketchbke freshness, simplicity of composition, and use of limited colors handled with a broad brush make them remarkable complements to the sculpture, drawings, and graphics. Volt s use of

told, bright colors derives from the Brucke artists and other Expressionists, but the blocklike treatment of the figures is very much his own; see *The Family* of about 1922 (cat. no. 159). In confronting the viewer with this fused image of three family members, he can phasized the inherent strength of a tightly interlocked group.

The Family may depict the same models seen in two of the early wood semiptures, Male Horker with Child (cat. no. 140) and Horker's Hife with Child (cat. no. 141). In the former, the man wears the typical worker's cap and carries a small container in his hand. Considering the period in which the sculpture was made, this may indicate that he was going to receive the bread and milk distributed daily by the Hoover-Speisung, the food program for children initiated by President floo ver. The latter sempture, Horker's II de with Child, makes a clear political statement. Although the pody of this middle loged woman looks strong, her hanging breasts and protending helly beneath her simple dress reveal a past of hunger and need. The artists of the Sezession. Gruppe 1919 wanted to agitate to change a society which remained immoved by such examples of misery. While both of these works suggest a narrative, they are also examples of a consummate artist's abuity to make highly abbreviated statues approximate realisin and simultaneously to express the inner state of man

the Beggar (cat. no. 145) parallels the works of such artists as Otto Dix, whom Yoll knew well in Dresden. and George Grosz. Crippled war veterans, such as the one depicted in this sculpture, were frequently forced to resort to begging or attempting to sell shoelaces or matches on the streets. Voll made use of all the available Expressionist devices in order to heighten the impact of this work. The base retains the form of the original free trink and the surfaces remain rough. The indistrict but rather primitive features of the figare, the slightly open mouth with thick lips, the broad nose, and the worker's cap pulled down over the forehead make this image that of a "typical" proletarian. the human and helpless gesture of this cripple, however, displays Voll's full commitment to the Expressionist call for a humanization of society. In all the preparatory drawings for this beggar (see cat. 1.0. 142), the figure retains its outstretched bands.

In Children's Funcral (cat no. 144), the strong but wrinkled face of the man forms the top of a nearly pyramidal structure. His deep-set eyes and straight moustache, accentuating closed but well-formed hips, create a rather hondramatic appearance. Until one recognizes that he carries the coffin of a child under his arm, the sculpture seems confusing in its forms. The smaller nuns tack all dramatic impact, the group of children has been placed at the front. Hardly more than sketches, these children move forward with folded hands, probably singing a hymn, as if to emphasize that what takes place behind them is beyond their understanding. Yet they can also be read as recognizing their own fate reflected in this experience.

In October of 1925, Voli obtained a job teaching at

Christaph Vol

Born 1897 Minich

thed 1939 Karlsrobe

the art school in Saarbrin ken. By tins time he had married and had a da ighter, and for the first time, he was able to count on a regular salary. Although he continued to work in wood, he also began to use more expensive materials, such as stone, and to work on a larger scale. His exclusive prior use of wood may therefore have been at least partially motivated by economies. With the change in location from Dresden to Saarbrücken, the orphanage subjects began to fade and a new, more realistic style became apparent

In Nude with Drapery (cat up. 145), the direction of German Expressionist scripture become obvious: details were regarded as disruptive to the perception of form as an elucidation of a state of bund it was from this image that Voll's large, warm, expansive, and frequently idealized female statues developed.

Nude, Ecce Homo (cat. no. 140), a life-size depiction of pain, age, and sadness, is an outstanding example of German Expressionist sculpture. The figure bends forward with closed eyes, one hand held out as if ask ing for a gift. Despite his wrinkled, aged body we sense that this man was once strong. As a number of preparatory studies indicate, Voll was inspired by the figure of a beggar whom he saw frequently in Saarbrucken. But the sculpture is far from being a realistic depiction of this man. Usually interpretations of the Ecce Homo theme - Christ standing before Pilate depact an individual confronting a crowd. This figure, though alone, makes its pieu so emotionally that no viewer can escape its directness. The gift which the empty hand requests is not material. Voll has used distortion to dramatize the Image, so that not only the hands perform the important gesture, but the whole figure of the mide man has become one moving accusation of mankind

The Saarbrucken community was not extremely supportive of Voll, but he did of tain a commission for a mother and child for the (acade of the savings association here (1927, bronze). This work quite obviously took the taste of the commissioners into account. Inthe same year, however, Voll exhibited in Berlin at the J.B. Neumann Galerie and at Galerie Merendorf, receiving fine reviews of his more Expressionist works. The year after, he won the prize for sculpture at the exhibition of the Akademie der Kunste in Berlin. On the basis of this recognition and his reputation as a creative and successful teacher, voll was named Professor of Sculpture of the Karlsruhe Kunstakademie. There he continued to work in hard stone. (Carraya marble and both brack and red Swedish granite) on larger-than-life figures, primarily female ones. Many successful exhibitions followed. At an international sculp. are exhibition in Zurich in 1931, Vol) was represented by the sculpture Allorker (1926; lost). which, however, was defaced. Voll was a tireless artistand according to his daughter completed approximately 140 large and small sculptures and a very large. number of drawings, graphics, and watercolors - all ina lifespan of forty two years.

When the Nazis began to enforce their "ideas" of art, Voll was immediately dismissed from his teaching

position. The director of the Nationalgalerie in Berlin, Or, Alois Schardt borrowed a black granite statue, Eve (1955), for an important planned exhibition of modern German art, but the Nazis prevented the show from opening. Furthermore, Voll's works were represented in the Entartete Kunst exhibition and catalogue of 1957 (see fig. 8, p. 17)

As with so many other German Expressionists of his geta ration Aoll sworks fall into two clearly delineated periods: the Expressionist period, which lasted until about 1924 25, and a second, more classical or realistic period. In his last international exhibition at the Kunsthans Zürich in 1957, his nine sculptures and seventeen drawings were shown next to works by Karl-Albiker, Willielm Gerstel, Kolbe, Marcks, and Otto-Schiessler, In short, Voll was rightfully considered one of Germany's important scriptors. The fact that so many of Voll's works survive is due to a circumstance. almost accidental in nature, Edvard Munch, the great Norwegian artist, had backed an exhibition of Yoll's work In Seaudinavia. By the time the Nazis had prohibited this exhibition, the sculptures were already in Denmark and were hidden there during the War Since. that time, Jodf's widow and daughter have seen to it that the works were returned to Germany, and some of them have found their way to the United States

Signer, Foll on base at

William Wauer was an exceptional artist of the Expressionist era, a man of versatile talents who worked both independently and in association with the leading cultural groups of his time. His studies at the Dresden,

Berlin, and Munich kunstakademien from 1884 to 1887 were followed by nearly two years of study in the United States, providing the basis for his pursuit of a degree in art history at the University of Leipzig. In 1896, however, rather than taking his examinations, he spent a year in Rome copying works by the Old Masters. Two years later, in 1899, he became the editor of the innovative, but short-lived, Berlin magazine Quickborn (Fountain of Youth). Around 1900, Wauer worked for the popular magazine Die Hoche (The Hick) and later became an advertising consultant for a number of large firms. He then moved to Dresden, continued his advertising activities, founded a weekly magazine, Dresdier Gesellschaft (Dresden Society), and earned his livelihood primarily as a theater critic

In 1905, Waner returned to Berlin and worked for a short time for the important theater director Max. Reinhardt until joining forces with the Hebbel Theater and finally becoming the director of the kleines The ater. Then, in 1911, he changed coreers again and became active in the young film industry, ite gained a reputation as a director and produced all of the films starring the great German actor Albert Bassermann.

While still immersed in the film world, he attended the 1912 Italian Futurist exhibition at Herwarth. Walden's Galerie Der Sturm, Wauer, who had always painted as a hobby, was so impressed by the exhibit that he decided to dedicate himself to the visual arts. In March of 1918, he exhibited some of his paintings at the Galerie Der Storin and in March of 1919 had his only one-man exhibition there. He became a close associate of Walden and published graphic works in the periodical Der Sturm, as well as a number of theoretical and combative articles about the "new" art -Expressionism. Walden was so impressed by Wauer's pantomime play. Die vier Toten von Fiametta (The Four-Dend from Liametta), that he wrote the music for it. The play was performed on October 12, 1920, in Dresden with very limited success and once more in the Uberbrettl, a Berlin cabaret. Throughout these years Waver moved through the "Expressionist scene" with great vitality and inventiveness.

In 1924, however, Expressionism began to suffer from a change in public taste and interest. When the artistic circles surrounding Walden and Der Sturm bekan to dissolve, Wager tried to stem the dissolution by founding and becoming the president of the internationale Vereinigung der Expressionisten, Kubisten, Futuristen und Konstruktivisten (International Organization of Expressionists, Cubists, Futurists, and Constructivists), later caffed Die Abstrakten (The Abstractionists). The group was prohibited in

1935, and it was inevitable that the Nazis would not permit Wauer to continue his work. For a while he seemed willing to accept Nazi aesthetics but soon realized that this went against his better judgment. He survived the Nazi period with the help of friends and his wife, and after the War be began to paint and exhibit again.

Wauer's close friend and associate Lothar Schreyer, who was director of the Sturm Theater, declared that "the rhythmic line (Boccioni) and the rhythmic plane (Archipenko) are united for the first time in the sculptural work of the German William Waner," Although this was certainly an overstatement, it is striking that, especially in Berlin, Wauer's sculptures have been nearly forgotten. His work is somewhat problematic. for art historians, since he frequently used the idioms of other artists, and a work catalogue does not yet exist. Some of his pieces, however, have certainly withstood the test of time, among them the 1919-21 portrait busts of Wauer's friends within the Sturm circle intriguing attempts to incorporate Cubist planes within three-dimensional Expressionist forms. The bust of Herwarth Walden (cat. no. 147) was the first of this group. The head is set on an elongated neck that curves in a slight diagonal and is surrounded by stylized hair which gives the impression of an Egyptian crown. Walden's deep set eyes, the prominent planes of his cheeks, his sensitively molded mouth, and strong nose and eyebrows are all clearly recognizable (see fig. 1, p. 207). The likeness to the model is surprising when one takes into account the fact that the sculptor (solated Walden's characteristic features and reassembled them in puzzlebke fasmon. Nearly a pendant to this work is the bust of the actor Albert Bassermann (cat. no. 148).

The head of Rudolf Blummer (cat. no. 149) is tilted slightly backward, with closed eves and sharp lines connecting the nose and open mouth. Such a pose would have been characteristic of Blummer, who was a famous reader of Expressionist poetry and prose within the Sturm circle. A close friend of Nell and Herwarth Walden and of Wauer, Blümmer published many theoretical essays on contemporary art

Water's artworks, arranged chronologically, together with manuscripts of his numerous radio programs, his articles on the theater, and his theater designs give a clear impression of the trends within post-World-War-I German Expressionism and await further exploration. – P.W.G.

Ossip Zadkine is among that group of Bussian act ists—including Marc Chagall, Wassiy Kan dinsky, and Archipenko, to name only a few—who, after enugrating to Europe, Changed the direction of modern art. In 1910, fol

towing a substantial but frequently interrupted period spent studying sculpture in England and France, Zadkine settled in Paris. His considerable octive of a tains over two hundred works displaying a continually changing approach to the human figure. Influences visible in his sculpture include sources as diverse as Rossian icons and African and Oceanic art; contemporary parallels may be found in the works of such art ists as Derain, Brancus), and Picasso. The variety evident in Zadkine's work makes it impossible to classify him under any of the popular rubries of twentieth-century sculpture.

The artist first made his mark in 1911, when he exhibited at the minth Salon d'Autonine in Paris along with his friends Lehmbruck, Baymond Duchamp-Vil Ion, and Archipenko. His early works show a romantic and refined tendency, which was aftered by the impact of the First World War, during which he served in the French army. After the War an obvious change took place in his art which might be described as an increased sensitivity to his material accomplanced by a greater receptivity to Cubism. While Zadkine cannot be called an Expressionist, his works excented between 1914 and 1918 reveal the formal concerns of Expressionism, such as elongations and deformations of the human figure and emphatic stylization of the human face. The work included in this exhibition, The Prophet (cat. no. 150), retains the form of the original tree; the attenuated figure leans slightly backward The head with its indistinct crown resembles Zad. kine's earlier sculptures in its nearly masklike form The Prophet at first sight gives the impression of an African fetish. It has also been compared to Bessian. Lechn idols and the Raba sculptures of southern Ros. sat, as well as Gauginn's sculptures, which Zadkine could have seen in Paris. Zadkine himself recognized the importance of the "primitivism" so widespir ad in Furope at this time. In an article written about a 1919. Parts exhibition of African art organized by Paul Guillaume, Zadkine stated that the African sculptor was "a priest" whose admirable desire was to create. "the image, the icon r_2 Begardless of all its possible. sources of influence, Zadkine's Prophet is one of his outstanding "Expressionist" works, conveying a spintuality rarely found in French sculpture of this period

Ossip Zadkine was greatly respected and admired dirring the years between the wars, his many public

commissions and his participation in important European and American exhibitions made his works well known. At the great Musée des Beaux Arts exhibition. in Brussels in 1955, which accurred at the same time. as the incipient Nazi suppression of modern art in Germany, Zadkine exhibited 139 sculptures and 47. gouaches. During the German occupation of France, he found refuge in the United States, lie taught at the Art Students' League in New York and exhibited at the Wildenstein Gallery, In 1945, he returned to Paris and taught sculpture at the Academie de la Grande Chaumière, and in 1949, the Museé National d'Art Moderne, Paris, presented a comprehensive exhibition of his works, Among his most famous later sculptures is the large figurative piece The Destroyed City (1946-55, bronze), which stands at the barbor of Rotterdam in the Netherlands, - P.W.G.

After 1914 Zaukine stated that he had been born in Smolensk, Bussia, where his parents had moved later, in fact.

Ossip Zadkane, "Un exposition d'art nègre," Su, vol. 4, nos.
 46, 1919
